

## DEVELOPMENT APPLICATION FORM

Application Form: All Applications | Rev. 03/29/2024

**INSTRUCTIONS:** The following information is required pursuant to the City's Unified Land Development Regulations (ULDR), Section 47-24, Development Permits and Procedures, and must be filled out accurately with all applicable sections completed. Only complete the sections indicated for application type with N/A for those items not applicable. Refer to "Specifications for Plan Submittal" by application type for submittal requirements, which can be found on the City's website.

Select the application type and approval level in **SECTION A** and complete the sections specified under each type.

<b>A APPLICATION TYPE AND APPROVAL LEVEL</b>			
Select the application type from the list below and check the applicable type.

# Progreso Village Neighborhood Stormwater Pump Station

## City of Fort Lauderdale Development Review Committee (DRC) Application

### Project-Narrative

The proposed development is a stormwater pump station located at 845 NW 3<sup>rd</sup> Avenue, Fort Lauderdale, FL 33311. The City of Fort Lauderdale is improving the stormwater infrastructure to reduce street flooding and stormwater runoff. The referenced site location is currently a vacant lot owned by the City of Fort Lauderdale. The proposed development will include a stormwater pump station, associated electrical building, and emergency generator. The stormwater pump station will collect stormwater runoff by gravity from the Progreso Village Neighborhood and be conveyed via stormwater force main to a proposed outfall to the stormwater gravity main on NW 6<sup>th</sup> Avenue. The stormwater pump station is necessary to reduce stormwater runoff and reduce flooding in the Progreso Village Neighborhood because gravity collection system alone is not effective due to location in a low-lying area.

The proposed pump station site is on a corner lot in a residential neighborhood with existing homes west of the lot. To preserve the neighborhood aesthetic, the proposed electrical building was designed with a Spanish colonial architectural style including faux doors, windows, and a terracotta pitched roof. The electrical building, emergency generator, and electrical transformer are designed to be on a raised platform 1.5 feet above the base flood elevation to protect from flooding events. Decorative stairs and railing in the front of the electrical building was added to blend in with residential features. The submersible stormwater pumps are in a wet well below grade. No. 57 stone will be installed in areas that are not concrete pavement to reduce maintenance. On site stormwater catch basins, drainage pipes, and swales will direct stormwater runoff into the stormwater pump station preventing runoff to neighboring properties. A decorative 6-foot aluminum panel fence will be installed around the pump station site for privacy and security. Landscape features include red tip cocoplum shrubs, six (6) Solitaire Palms along the south side of the property, thirteen (10) Sabal Palms on the North

side of the property, and one (1) Spanish Stopper tree facing NW 9<sup>th</sup> Street. The Florida native low-maintenance landscape features will improve the appearance of the pump station property and help assimilate this development into the single-family neighborhood.

Approved by:

Colleen Howard, PE

February 3, 2025

## Progresso Village Neighborhood Stormwater Improvements

### City of Fort Lauderdale Development Review Committee (DRC) Application

**Case Number: UDP-S24042**

#### **Public Purpose Request-Responses**

##### **Public Purpose Request- Code Deviations**

The following list includes the ULDR Section 47-18.26 Public Purpose Uses and the narratives stating how the project satisfies public purpose intent. The table listing required code and proposed code deviations is also provided.

Regards,

Guillermo Rivera

HDR

8333 NW 53<sup>rd</sup> Street, Suite 302

Doral, FL 33166

D 786.264.3880

**Section 47-18.26-Public Purpose Uses**

Item	Code	Response
A.	Any provision to the contrary notwithstanding, publicly owned structures may be erected and lands used for public purposes, in any zoning district in the city unless prohibited by the city comprehensive plan; provided, however, no building or use permit shall be issued by the city for any such plans, locations or use without the prior approval of the city commission as provided herein.	Acknowledged. DRC Site Level IV Application submitted.
B	Consideration of the approval of a use or structure for public purposes which requires relief from a zoning regulation of the city shall be initiated by filing an application for approval with the department by the property owner or the person or entity wishing to use the property for a public purpose.	Acknowledged. DRC Site Level IV Application submitted.
C	An application for a public use or structure shall include:	Acknowledged. DRC Site Level IV Application submitted.
C.1	A conceptual site plan showing the size and location of all structures on or to be located on the property, including but not limited to elevations, location of vehicular and pedestrian ingress and egress, landscaping and floor plans. If the public purpose is to utilize property as a social service residential facility, the site plan shall show how the use or structure meets the requirements of Section 47-18.32;	The site plan submitted shows the location of all structures to be located on the property.
C.2.	A legal description of the property;	Submitted with DRC application.
C.3	A description of the zoning regulation from which relief is necessary to conduct the public use or construct the public structure;	Provided in a separate table.
C.4	A description of the need for the public use or structure including a description of other similar uses or structures and their locations in the city;	The Progresso Village Stormwater Improvements is 1 of 7 priority neighborhoods identified by the City of Fort Lauderdale. This is part of a stormwater masterplan effort to improve drainage and reduce local flooding in the City of Fort Lauderdale. The other 6 projects have similarly proposed stormwater drainage and stormwater pump stations.
C.5	A description of the reason why the proposed location is necessary in relation to the need for the use or structure;	Progresso Village was identified as 1 of 7 priority neighborhoods that are low-lying areas vulnerable to sea-level rise, elevated water table, and flood-

		related issues. A stormwater pump station is needed to reduce flooding and move large amounts of water to the outfall; gravity sewers are not sufficient in low-lying relatively flat areas.
C.6	A description of what makes the location of the use or structure on the property desirable;	The property is currently a vacant lot owned by the City and is central to the gravity storm sewer collection system in the Progresso neighborhood.
C.7	A description of the economic and environmental impact on the area as a result of permitting the use or structure;	The positive impact of the stormwater pump station is protecting nearby homes and property by reducing local flooding events. The pump station will improve the resiliency of the neighborhood infrastructure and allow for future growth.
C.8	A description of the impact of the use or structure on neighboring properties;	The stormwater pump station will reduce the impact of local flooding from precipitation events and remove stormwater quickly from the area.
C.9	A description of how the site plan addresses any negative impacts which might occur as a result of permitting the use or structure;	The site plan will use Florida Native Landscaping, decorative architectural features, and a privacy fence to reduce the visual impact of the pump station.
C.10	A description of off-site or on-site factors which mitigate any negative impacts which might occur as a result of permitting the public use or structure; and	The architectural features for the pump station are intended to blend in with the neighborhood and the Florida-native landscaping will provide increased curb appeal.
C.11	A description of the efforts to locate other sites for the use or structure and reasons why other sites are not as desirable as the site proposed (factors in considering feasibility may include land use, zoning, economic, geographic factors and size).	Extensive watershed modeling efforts were conducted during the design phase to locate the sites vulnerable to flood-related issues. The stormwater pump station intends to improve the stormwater infrastructure for the Progresso neighborhood.
D.	The application shall be reviewed by the city department responsible for review of development permits for a determination that the application is complete and forwarded to the development review committee (DRC). After review and comments by the DRC, the application shall be forwarded to the planning and zoning board for review. The recommendation of the DRC and the planning and zoning board shall be forwarded to the city commission.	Acknowledged.
E.	The city commission shall hold two (2) public hearings to consider an ordinance approving a public purpose use or structure and shall provide notice of hearing utilizing the same notice requirements as for a rezoning.	Acknowledged.

F.	The city commission may approve or approve with conditions the application for location of a public use or structure based on the following findings:1.There is a need for the use or structure to be located where proposed.2.The use meets a valid municipal purpose.3.The location of the use or structure is not in conflict with the city comprehensive plan.4.Off-site or on-site conditions exist which reduce any impact of permitting the public use or structure.5.On-site improvements have been incorporated into the site plan which minimize any adverse impact as a result of permitting the public use or structure.6.Alternative locations have been identified and reviewed or it has been determined that no feasible alternative locations are available.7.The proposed site is found to be the most feasible for location of the public use or structure.8.The public purposes to be met by the location of the use or structure outweigh the application of the zoning regulation and prohibiting the location of the public use or structure.	Acknowledged.
G.	The approval of a public use or facility shall terminate when the use or facility is no longer publicly owned or used, and the property upon which the use or facility is located shall be subject to the requirements of the zoning district within which it is located.	Acknowledged.

Table 1- Public Purpose Request-Deviations

ULDR Section	Development Standard	Required (RMM-25)	Proposed	Comment-Response
Section 47-5.19	List of permitted and conditional uses, RMM-25 Residential Mid Rise Multifamily/Medium High Density District.	District Categories— Residential Dwellings, Lodging, Mixed Use Development, Public Purpose Facilities, Child Day Care Facilities, Nursing Home Facilities, and Accessory Uses, Buildings and Structures.	Public Utility (Stormwater Pump Station)	The Progresso Village is one of the priority neighborhoods identified in the City's stormwater masterplan that needs drainage improvements. The proposed pump station will provide much-needed relief from flooding duration by collecting stormwater runoff and discharging to the new river.

Section 47-5.36	Table of dimensional requirements- Minimum Corner Yard (ft.)	25 feet	8 feet	The proposed stormwater pump station requires space between the electrical building, pump station wet well, and generator for staff to be able to provide maintenance. Due to the limitations, we request a deviation from the 25 feet corner yard requirement for the electrical building.
Section 47-5.36	Table of dimensional requirements- Minimum lot width (ft.)	100	75	The site is a vacant lot owned by the City that is 75 feet wide. The proposed use is a stormwater pump station that will help reduce flooding in Progresso Village. The site will only serve as a public utility and has zero dwelling units/occupancy. We respectfully request a deviation from the 100 feet minimum lot width for other uses.
Section 47-19.5.C.1	Landscape Requirements	Residential Districts: Unless a fence is permitted to be located at the property line pursuant to Table 1, all walls and fences, including chain link, shall be required to be planted with hedges, shrubs, groundcover or a combination thereof, in the area between the property line abutting a street and the fence or wall. The plantings shall consist of varied species.	Continuous border of cocoplum shrubs between the proposed sidewalk and the fence along the property line facing the ROW of NW 9 <sup>th</sup> Street and NW 3 <sup>rd</sup> AVE.	The 3 feet of area between the fence and the proposed sidewalk is not sufficient for a flowering tree to be established and will interfere with the pedestrian sidewalk. A continuous hedge of red-tip cocoplum between sidewalk and fence and small trees planted on the inside of the fence will be provided. We respectfully request a deviation from the requirement to plant trees between the sidewalk and fence.
Sec. 47-21.10.	Irrigation	Sufficient irrigation, as determined by Zoning	No irrigation system proposed.	The City stormwater program requested no irrigation to be provided

		Administrator or designee in accordance with the design of the landscaped area and the requirements of the plant material to be used, shall be supplied to all landscaped areas.		for the site. The plantings are native Florida species that do not require irrigation. The inside of the fence area will use gravel designed for minimal maintenance eliminating the need for mowing and irrigation repairs. We respectfully request a deviation from the irrigation requirements.
Section 47-25.3-d.i.	Buffer yard Requirements-Landscape Strip	10 feet	3 feet	The area on the south side of the property is needed to install utilities for the stormwater pump station. The force main pipe is required to be inside the fenced area for City staff to be able to perform maintenance and inspections. We respectfully request a deviation from the 10-foot landscape buffer and will provide red-tip cocoplum shrubs along the 3-foot space between the property line and fence as a buffer. Trees will be planted on the inside of the fence to provide additional landscaping.
