

City of Fort Lauderdale
General Employees Retirement System
Actuarial Valuation Report as of September 30, 2023

Annual Employer Contribution for the Fiscal Year Ending
September 30, 2025

April 9, 2024

The Board of Trustees
City of Fort Lauderdale General Employees Retirement System
Fort Lauderdale, Florida

**Re: City of Fort Lauderdale General Employees Retirement System
Actuarial Valuation as of September 30, 2023
Actuarial Disclosures**

Dear Members of the Board:

The results of the September 30, 2023 Annual Actuarial Valuation of the City of Fort Lauderdale (“City”) General Employees Retirement System (“System” or “Plan”) are presented in this report.

This report was prepared at the request of the Board of Trustees and is intended for use by the System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purposes of the valuation are to measure the System’s funding progress, to determine the employer contribution for the fiscal year ending September 30, 2025, to determine the actuarial information stipulated by Financial Accounting Standards Board (FASB) Statement No. 35 for the plan year ending September 30, 2023, and to present the actuarial information for Governmental Accounting Standards Board (GASB) Statement No. 67 for the fiscal year ending September 30, 2023. This report also includes estimated GASB Statement No. 67 information for the fiscal year ending September 30, 2024. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results associated with the benefits described in this report for purposes other than those identified above may be significantly different.

The contribution amount in this report is determined using the actuarial assumptions and methods disclosed in Section D of this report. This report includes risk metrics in Section A but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data and other information through September 30, 2023. The valuation was based upon information furnished by the Plan Administrator and the City concerning System benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the Plan Administrator and the City.

This report was prepared using certain assumptions adopted by the Board as authorized by and prescribed under Florida Statutes, as described in Section D of this report. The investment return assumption was prescribed by the Board, and the assumed mortality rates were prescribed by the Florida Statutes under Chapter 112.63. The combined effect of the assumptions, excluding prescribed assumptions or methods set by Florida Statutes, is expected to have no significant bias (i.e. not significantly optimistic or pessimistic). All actuarial assumptions and methods used in the valuation follow the guidance in the applicable Actuarial Standards of Practice. Additional information about the actuarial assumptions is detailed in Section D of this report.

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge, the information contained in this report is accurate and fairly presents the actuarial position of the Plan as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices, with the Actuarial Standards of Practice issued by the Actuarial Standards Board, and with applicable statutes.

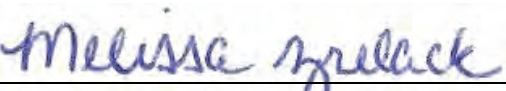

Melissa R. Zrelack and Piotr Krekora are members of the American Academy of Actuaries. These actuaries meet the Academy's Qualification Standards to render the actuarial opinions contained herein. The signing actuaries are independent of the plan sponsor.

This actuarial valuation and/or cost determination was prepared and completed by us or under our direct supervision, and we acknowledge responsibility for the results. To the best of our knowledge, the results are complete and accurate. In our opinion, the techniques and assumptions used are reasonable, meet the requirements and intent of Part VII, Chapter 112, Florida Statutes, and are based on generally accepted actuarial principles and practices. There is no benefit or expense to be provided by the Plan and/or paid from the Plan's assets for which liabilities or current costs have not been established or otherwise taken into account in the valuation. All known events or trends which may require a material increase in plan costs or required contributions have been taken into account in the valuation.

Gabriel, Roeder, Smith & Company (GRS) will be pleased to review this valuation and report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,

GABRIEL, ROEDER, SMITH & COMPANY

SECTION A

SUMMARY OF VALUATION RESULTS

Valuation Highlights

Closed Plan

In reviewing this Report, it is important for the reader to keep in mind that this System has been closed to new members since 2007. City employees hired since 2007 become members of a separate defined contribution retirement program. One consequence of this closure is that the annual payment on the unfunded actuarial accrued liability (UAAL) will generally increase as a percent of covered payroll, as such payroll generally decreases from year to year.

Covered Payroll

Throughout this Report, the payroll figures shown represent covered payroll for active members of the Retirement System only, excluding DROP members, and all costs shown as a percentage of payroll are determined on this basis.

Required City Contribution

The required City contribution for the fiscal year beginning October 1, 2024 is approximately \$8.2 million, an increase of approximately \$1.1 million compared to approximately \$7.1 million for the fiscal year beginning October 1, 2023. The increase in the contribution requirement from the previous valuation is mainly attributable to unfavorable actual experience, in particular, lower than projected investment returns (as described below).

Plan Amendments

Since the prior valuation, there were no plan amendments that had an actuarial impact on the cost of the Plan.

Observed Experience

Year-to-year differences between assumed experience and observed experience are inevitable in the operation of the System. Examples of favorable experience are: higher than anticipated member termination rates; higher than projected investment returns; a low incidence of disability and delayed retirement. Examples of unfavorable experience are: earlier than anticipated retirement; higher than projected pay increases; increases in longevity after retirement and decreases in the number of active members. Each annual actuarial valuation takes observed experience differences into account. If on a net basis the differences are favorable, the unfunded actuarial accrued liability is less than projected (an experience gain) otherwise it is more than projected (an experience loss). Specific activity information is located in Sections C and D of this report.

Observed experience during the year was in the aggregate less favorable than expected, resulting in an actuarial experience loss of \$14,952,473 compared to last year's loss of \$14,618,052. The loss was mainly attributable to a lower than expected recognized investment return on the actuarial value of assets during the year. The investment return on the actuarial value of assets for the fiscal year ending September 30, 2023 was 5.3% versus the assumed investment return of 6.75%. The investment return on the market value of assets was 9.4%.

Additional sources of actuarial losses were demographic experience including higher than expected average salary increases among continuing active members (5.7% actual versus 3.7% expected).

The overall net actuarial experience loss increased the required City contribution by approximately \$1.4 million.

Assumption/Method Changes

There were no revisions made to the actuarial assumptions and methods since the last actuarial valuation.

The amortization period for new Unfunded Actuarial Accrued Liability (UAAL) bases was lowered from 20 years to 19 years and will continue to be lowered by one year for each year in the future.

Funded Ratio

The funding progress indicators described on page B-4 and reported on page B-5 indicate that the accrued obligations of the System, as measured by the entry-age actuarial cost method, are 95.8% funded this year, compared to last year's funded ratio of 97.7%.

Required Contribution in Later Years

It is important to keep in mind that under the asset smoothing method, investment gains and losses are recognized over five years. As of September 30, 2023, the actuarial value of assets exceeded the market value of assets by \$31,324,106. If these deferred investment losses were recognized in the actuarial value of assets, the required City contribution would have been about \$2.9 million higher.

Relationship to Market Value

If the market value of assets had been the basis for the valuation, the required City contribution would have been approximately \$11.0 million, and the funded ratio would have been 91.6%. In the absence of other gains and losses, the required City contribution should increase to that level over the next several years.

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. Investment risk – actual investment returns may differ from the expected returns;
2. Contribution risk – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
3. Salary and Payroll risk – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
4. Longevity risk – members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
5. Other demographic risks – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The contribution shown on page B-2 may be considered as a minimum contribution amount that complies with Florida Statutes. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	2023	2022	2021	2020
Ratio of the market value of assets to total payroll	21.46	19.84	21.52	17.03
Ratio of actuarial accrued liability to payroll	23.42	21.98	19.51	17.88
Ratio of actives to retirees and beneficiaries	0.27	0.29	0.34	0.39
Ratio of net cash flow to market value of assets	-5.93%	-5.66%	-4.33%	-4.99%

Ratio of Market Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 2.0 times the payroll, a return on assets 5% different than assumed would equal 10% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time. The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 2.5 times the payroll, a change in liability 2% other than assumed would equal 5% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

Ratio of Actives to Retirees and Beneficiaries

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

Ratio of Net Cash Flow to Market Value of Assets

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

Low-Default-Risk Obligation Measure

Actuarial Standards of Practice No. 4 (ASOP No. 4) was revised and reissued in December 2021 by the Actuarial Standards Board (ASB). It includes a new calculation called a low-default-risk obligation measure (LDRM) to be prepared and issued annually for defined benefit pension plans. The transmittal memorandum for ASOP No. 4 includes the following explanation:

“The ASB believes that the calculation and disclosure of this measure provides appropriate, useful information for the intended user regarding the funded status of a pension plan. The calculation and disclosure of this additional measure is not intended to suggest that this is the “right” liability measure for a pension plan. However, the ASB does believe that this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.”

The following information has been prepared in compliance with this new requirement. Unless otherwise noted, the measurement date, actuarial cost methods, and assumptions used are the same as for the funding valuation covered in this actuarial valuation report.

A. Low-default-risk Obligation Measure of benefits earned as of the measurement date: \$936,743,706 (compared to AAL of \$749,719,569 developed using funding assumptions)

B. Discount rate used to calculate the LDRM: 4.63% based on Fidelity Investments’ “20-Year Municipal GO AA Index” as of September 29, 2023

C. Other significant assumptions that differ from those used for the funding valuation: None

D. Actuarial cost method used to calculate the LDRM: Individual Entry-Age Actuarial Cost Method

E. Valuation procedures to value any significant plan provisions that are difficult to measure using traditional valuation procedures, and that differ from the procedures used in the funding valuation: None

F. Commentary to help the intended user understand the significance of the LDRM with respect to the funded status of the plan, plan contributions, and the security of participant benefits: The LDRM is a market-based measurement of the pension obligation. It estimates the amount the plan would need to invest in low risk securities to provide the benefits with greater certainty. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan’s benefit obligation.

The difference between the two measures (Valuation and LDRM) is one illustration of the savings the sponsor anticipates by taking on the risk in a diversified portfolio.

SECTION B

DETAILED VALUATION RESULTS

Funding Objective

The funding objective for the Retirement System is to establish and receive contributions which meet the requirements of Part VII, Chapter 112, Florida Statutes.

Contributions

The Retirement System is supported by participant contributions, City contributions and investment income on Retirement System assets.

Contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:

- (1) cover the costs allocated to the current year (normal cost) by the actuarial cost methods described in Section D; and
- (2) finance over a period of future years the actuarial costs not covered by present assets and anticipated future normal costs (unfunded actuarial accrued liability).

The financing period used for the unfunded actuarial accrued liability at September 30, 2000 was combined into a single period of 23 years. Changes in the unfunded liability after September 30, 2000 are financed over 30 years, with the exception of the change in unfunded liability due to the Bonus Incentive Program, which was financed over 5 years starting October 1, 2011. Starting October 1, 2013, the amortization period for new bases will be reduced by one year each valuation.

Contribution requirements for the next plan and fiscal year are shown on page B-2.

Contributions to Finance Benefits of the Retirement System To Be Contributed During the Fiscal Year Beginning October 1, 2024

Contributions Expressed as	From 9/30/2023 Valuation		From 9/30/2022 Valuation	
	% of 10/1/24		% of 10/1/23	
	Member Payroll ⁽¹⁾	\$ Contributions ⁽²⁾	Member Payroll ⁽¹⁾	\$ Contributions ⁽²⁾
<i>Normal Cost</i>				
Service pensions	16.39 %	\$4,977,461	16.62 %	\$5,338,839
Deferred service pensions	2.01	610,415	1.94	623,186
Disability pensions	1.60	485,902	1.63	523,605
Death-in-service pensions	0.51	154,881	0.53	170,252
Refunds of member contributions	0.26	78,959	0.26	83,520
Total Normal Cost	20.77	6,307,618	20.98	6,739,402
<i>Unfunded Actuarial Accrued Liability</i>				
Retired members and beneficiaries	0.00	0	0.00	0
Active and vested terminated members	10.41	3,160,991	5.22	1,675,687
Total Unfunded Actuarial Accrued Liability	10.41	3,160,991	5.22	1,675,687
<i>Administrative Expenses</i>	1.65	500,009	1.80	577,753
Total Unadjusted Computed Contribution	32.83	9,968,618	28.00	8,992,842
<i>Adjustments to Computed Contribution</i>				
FS 112.64(5) Compliance	0.00	0	0.00	0
Full funding credit	0.00	0	0.00	0
Total Adjustments	0.00	0	0.00	0
Total Adjusted Contribution Requirement	32.83 %	\$9,968,618	28.00 %	\$8,992,842
Member portion	5.97	1,813,023	5.97	1,917,742
City portion	26.86	8,155,595 ⁽³⁾	22.03	7,075,100
Estimated Contribution Year Covered Payroll	N/A	30,368,891	N/A	32,122,979

⁽¹⁾Estimated Covered Payroll (excluding DROP members) for the 2024-25 Fiscal Year is \$30,368,891 compared to \$32,122,979 for the 2023-24 year. These figures represent estimated payroll for active members of the Retirement System only. The System has been closed to new members since 2007. As a result, the required contribution will tend to increase as a percent of covered payroll, as such payroll decreases from year to year.

⁽²⁾Dollar contributions have been projected to allow for projected compensation increases, retirements, employment terminations and deaths. The required Employer contribution has been adjusted for interest on the basis that contributions are made in equal installments at the end of each pay period.

⁽³⁾The required City contribution is \$7,829,561, if paid in full on October 1, 2024.

112.64, F.S. requires City contributions to be deposited not less frequently than quarterly. Member contributions, which are in addition to the City contributions, must be deposited not less frequently than monthly.

Comparative contribution amounts for prior fiscal years are shown on page B-3.

City Contribution Requirement: Historical Comparison

These percent of payroll contribution figures represent percentages of covered payroll for active members of the Retirement System only, excluding DROP members. The System has been closed to new members since 2007. As a result, the required contribution will continue to increase as a percent of covered payroll, as such payroll decreases from year to year.

* UAAL represents Unfunded Actuarial Accrued Liability.

(a) After changes in benefit provisions and/or actuarial assumptions/methods.

(b) Before changes in benefit provisions and/or actuarial assumptions/methods.

Funding Progress Indicators

There is no single all-encompassing measure of a pension plan's funding progress and current funded status. Understanding of short-term funding progress and status can be achieved using the following indicators:

Indicator (1) - The actuarial present value of gains or losses realized in the operation of the Retirement System. Gains and losses are expected to cancel each other over a period of years but sizable year-to-year fluctuations are common.

Indicator (2) - The ratio of the funding value of assets to the actuarial accrued liability. The ratio is expected to increase over time but the basic trend may be interrupted by benefit improvements.

Indicator (3) - The ratio of the unfunded actuarial accrued liability to participant payroll. In a soundly financed pension fund, the amount of the unfunded actuarial accrued liability will be controlled and prevented from increasing in the absence of benefit improvements. However, in an inflationary environment it is seldom practical to impose this control on dollar amounts which are depreciating in value. The ratio is a relative index of condition where inflation is present in both items. The ratio is expected to decrease over time but the basic trend may be interrupted by benefit improvements.

Funding Progress Indicators - Historical Comparison

Valuation Date	Indicator (1)		Indicator (2)		Indicator (3)

* Reflects State mandated mortality assumption change.

(a) After changes in benefit provisions and/or actuarial assumptions/methods.

(b) Before changes in benefit provisions and/or actuarial assumptions/methods.

The payroll figures represent covered payroll for active members of the Retirement System only, excluding DROP members, and the Unfunded AAL as a percent of payroll was calculated on this basis.

AAL represents the actuarial accrued liability using the Entry Age actuarial cost method.

Derivation of Experience Gain/(Loss)

Derivation	Year Ended 2023
(1) UAAL at start of year	\$ 16,671,470
(2) Employer normal cost for year	5,399,413
(3) Actual Employer contributions	6,465,406
(4) Interest accrued on (1), (2) and (3)	871,140
Interest Rate from previous year valuation:	6.75%
(5) Expected UAAL before changes and experience gain/(loss)	16,476,617
(6) Effect of COLA during year	0
(7) Effect of benefit changes	0
(8) Effect of assumption or method changes	0
(9) Expected UAAL after changes (5) + (6) + (7) + (8)	16,476,617
(10) Actual UAAL at end of year	31,429,090
(11) Experience gain/(loss) (9) - (10)	(14,952,473)
(12) Gain/(loss) due to investments	(10,491,540)
(13) Gain/(loss) from other sources	(4,460,933)

UAAL represents Unfunded Actuarial Accrued Liability.

The annual payment is the level dollar amount needed to amortize the base over the remaining years. The percent of payroll figures represent percentages of covered payroll for active members of the Retirement System only, excluding DROP members. The System has been closed to new members since 2007. As a result, the annual payment on the unfunded accrued liability will continue to increase as a percent of covered payroll, as such payroll decreases from year to year.

Derivation of Funding Value of Assets

	2019	2020	2021	2022	2023
Beginning of Year					
(1) Market Value	\$681,588,169	\$664,754,035	\$676,092,781	\$802,074,268	\$666,552,001

SECTION C

BENEFIT PROVISIONS AND DATA

Summary of Provisions Considered for Actuarial Valuation (as of September 30, 2023)

A. Ordinances

The Plan was established under the Code of Ordinances of the City of Fort Lauderdale, Florida, Chapter 20, Article IV, Division 2, and amended under Ordinance No. C-18-22 passed and adopted on August 21, 2018. The Plan is also governed by certain provisions of Part VII, Chapter 112, Florida Statutes (F.S.) and the Internal Revenue Code.

B. Effective Date

January 3, 1973

C. Plan Year

October 1 through September 30

D. Type of Plan

Qualified, governmental defined benefit retirement plan; for GASB purposes it is a single employer plan.

E. Eligibility Requirements

The plan is closed to new members hired on or after the following dates:

- (1) October 1, 2007 for employees represented by the Teamsters Union,
- (2) November 7, 2007 for employees represented by the Federation of Public Employees, and
- (3) March 5, 2008 for employees not covered by a Bargaining Unit and including new Police Cadets.

Prior to closure of the plan, all general employees were eligible to become members including those previously excluded due to age at hire (over age 55) or due to classification. Firefighters and Police Officers were excluded.

F. Credited Service

Service is measured as the period of uninterrupted service from the date of employment until the date of entry into the DROP, termination, retirement, or voluntary withdrawal from the plan. No service is credited for any periods of employment for which the member received a refund of employee contributions.

G. Earnings

Base wages, including assignment pay, regular longevity pay, and member contributions “picked-up” pursuant to section 20-112(a) of the Code. All irregular payments such as those for unused vacation time, sick leave, overtime and severance pay are excluded.

H. Average Monthly Earnings (AME)

Group I Members: One twenty-fourth (1/24) of Earnings for the highest 2 years out of the last 5 years of Credited Service prior to termination or retirement.

Group II Members: One thirty-sixth (1/36) of Earnings for the highest 3 years of Credited Service prior to termination or retirement.

I. Normal Retirement/Service Retirement

Eligibility: A member may retire on the first day of the month coincident with or next following the earlier of:

Group I Members:

(1) Age 55 regardless of Credited Service if hired prior to January 21, 2004; Age 55 with 5 years of Credited Service if hired on or after January 21, 2004, or

(2) 30 years of Credited Service regardless of age.

Group II Members: Age 65 regardless of Credited Service.

Group II Members may also retire under Service Retirement on the first day of the month coincident with or next following 30 years of Credited Service regardless of age.

Benefit: Group I Members: 3% of AME multiplied by years of Credited Service up to 25 years, plus 2.5% of AME multiplied by years of Credited Service in excess of 25 years. Benefit is limited to 90% of AME and subject to the provisions of Section 415 of the Internal Revenue Code.

Group II Members: 1.5% of AME multiplied by years of Credited Service up to 30 years. Benefit is subject to the provisions of Section 415 of the Internal Revenue Code. If the member is retiring under Service Retirement with Credited Service less than 35 years, the benefit is reduced as shown below:

<u>Service at Retirement</u>	<u>Pension Reduction</u>
35 & up	None
34	2 %
33	5
32	9
31	14
30	19

Normal Form

of Benefit:

Life annuity with the following survivor benefits for Group I Members only; other options are also available.

- (1) Surviving Spouse and children: If married at time of retirement, 100% of pension continues for 1 year; 60% continues thereafter until remarriage or death. In addition, each unmarried child under age 18 receives 20% of retired member's pension. Maximum payable to spouse and children is 100% of retired member's pension.
- (2) Children (no spouse receiving): Each unmarried child under age 18 receives 25% of retired member's pension. Maximum total of all pensions is 100% of retired member's pension.
- (3) No spouse or children (at time of retirement): If the retired member was hired prior to 1973, the designated beneficiary receives a lump sum equal to the difference, if any, between 60 times the retired member's monthly pension and the amount paid the retired member; otherwise, the designated beneficiary receives a lump sum equal to the difference, if any, between the amount contributed as a member and the amount received as a retired member.

COLA:

There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

J. Early Retirement

Eligibility:

A member may elect to retire earlier than the Normal Retirement Eligibility upon attainment of age 50 with 15 years of Credited Service for Group I Members and age 55 with 15 years of Credited Service for Group II Members.

Benefit:

Group I Members: The Normal Retirement Benefit is reduced by five-twelfths (5/12) percent for each month by which the Early Retirement date the Normal Retirement date.

Group II Members: The Normal Retirement Benefit is reduced by one-third (1/3) percent for each of the first 60 months by which the Early Retirement date precedes the Normal Retirement date and one-half (1/2) percent for each month over 60 months.

Normal Form

of Benefit:

Life annuity with the following survivor benefits for Group I Members only; other options are also available.

- (1) Surviving Spouse and children: If married at time of retirement, 100% of pension continues for 1 year; 60% continues thereafter until remarriage or death. In addition, each unmarried child under age 18 receives 20% of retired member's pension. Maximum payable to spouse and children is 100% of retired member's pension.

- (2) Children (no spouse receiving): Each unmarried child under age 18 receives 25% of retired member's pension. Maximum total of all pensions is 100% of retired member's pension.
- (3) No spouse or children (at time of retirement): If the retired member was hired prior to 1973, the designated beneficiary receives a lump sum equal to the difference, if any, between 60 times the retired member's monthly pension and the amount paid the retired member; otherwise, the designated beneficiary receives a lump sum equal to the difference, if any, between the amount contributed as a member and the amount received as a retired member.

COLA: There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

K. Delayed Retirement

Same as Normal Retirement taking into account Earnings and service credited until the date of actual retirement.

L. Service Connected Disability

Eligibility: Any member who becomes totally incapacitated and unable to perform regular and continuous duty as an employee as a result of a service-connected injury, disease or disability is eligible for a disability benefit commencing on the 91st day of disability.

Benefit: Sixty-five (65) percent of the member's monthly Earnings at time of disability less, to the extent permitted by law, Worker's Compensation benefits.

Normal Form of Benefit: Payable until the Normal Retirement date, death, or recovery from disability. In the event a disability benefit is being paid after the Normal Retirement date and is greater than the accrued Normal Retirement Benefit, the disability benefit shall be extended until 5 years after the Normal Retirement date or until total service credit (including service credit granted for disability period) provides a Normal Retirement Benefit greater than or equal to the disability benefit.

COLA: There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

M. Non-Service Connected Disability

Eligibility: Any member who becomes totally incapacitated and unable to perform regular and continuous duty as an employee as a result of a non-service connected injury, disease or disability is eligible for a disability benefit commencing on the 91st day of disability.

Benefit: Group I Members: Fifty (50) percent of the member's monthly Earnings at time of disability less, to the extent permitted by law, primary Social Security benefits.

Group II Members: Five (5) percent of the member's monthly Earnings at time of disability multiplied by Credited Service up to 13 years less, to the extent permitted by law, primary Social Security benefits.

Normal Form of Benefit: Payable until the Normal Retirement date, death, or recovery from disability. In the event a disability benefit is being paid after the Normal Retirement date and is greater than the accrued Normal Retirement Benefit, the disability benefit shall be extended until 5 years after the Normal Retirement date or until total service credit (including service credit granted for disability period) provides a Normal Retirement Benefit greater than or equal to the disability benefit.

COLA: There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

N. Death in the Line of Duty

Eligibility: Any member who dies while employed from causes directly related to employment with the City is eligible for the following survivor benefits.

Benefit: The survivor benefits are payable monthly as described below.

- (1) The spouse is paid 50% of the member's monthly Earnings at the time of death.
- (2) While the spouse is receiving, each eligible child is paid 10% of the member's monthly Earnings at the time of death with a maximum of 80% between both spouse and children. If there is no spouse receiving, 50% of the monthly Earnings at the time of death is equally distributed to the eligible children.
- (3) If there is no eligible spouse or children, 50% of the member's monthly Earnings at the time of death are paid to the member's beneficiary(s).

Normal Form of Benefit: Spouse's benefits are payable until remarriage or death; children's benefits are payable until age 18, marriage or death. For beneficiaries other than spouses or children, benefits are payable until the earlier of 96 months or the death of the last surviving beneficiary.

COLA: There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

O. Other Pre-Retirement Death

Eligibility: Any member who dies while employed from causes not directly related to employment with the City is eligible for the following survivor benefits. Group II Members must be at least age 55 with 15 years of Credited Service to be eligible.

Benefit: Group I Members: 50% of the member's monthly Earnings at the time of death are paid to the member's beneficiary(s).

Group II Members: 50% of the member's monthly Early Retirement Benefit is paid to the member's spouse.

Normal Form of Benefit: Payable until the earlier of 96 months or the death of the last surviving beneficiary. In lieu of the Normal Form of Benefit, Group I members prior to January 3, 1973 may elect a death benefit equal to 4 times their annual compensation paid in a lump sum.

COLA: There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

Beneficiaries of Group II Members who die prior to age 55 will receive a refund of the member's accumulated contributions with interest.

P. Post Retirement Death

Benefit determined by the form of benefit elected upon retirement.

Q. Optional Forms

In lieu of electing the Normal Form of benefit, the optional forms of benefits available to all retirees are the 10 Years Certain and Life Thereafter or the Joint and Last Survivor options.

R. Vested Termination

Eligibility: A member has earned a non-forfeitable right to Plan benefits after the completion of 5 years of Credited Service for Group I Members and 10 years of Credited Service for Group II Members.

Benefit: The benefit is the member's accrued Normal Retirement Benefit as of the date of termination. Benefit begins at age 55 for Group I Members and age 65 for Group II Members.

Members with 15 or more years of Credited Service can elect to receive an Early Retirement benefit beginning at age 50 or later for Group I Members and age 55 or later for Group II Members. If so elected, the benefit will be reduced for Early Retirement.

Normal Form of Benefit: Single life annuity; other options are also available.

COLA: There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

Members terminating employment with less than 5 years of Credited Service for Group I Members and 10 years of Credited Service for Group II Members will receive a refund of their own accumulated contributions with interest.

S. Refunds

- Eligibility:** All members terminating employment with less than 5 years of Credited Service for Group I Members and 10 years of Credited Service for Group II Members are eligible. Optionally, vested members may elect a refund in lieu of the vested benefits otherwise due.
- Benefit:** A refund of the member's contributions with interest. Interest is currently credited at a rate of 3% per annum.

T. Member Contributions

Group I Members: 6% of Earnings.

Group II Members: 4% of Earnings.

U. Employer Contributions

The amount determined by the actuary needed to fund the plan properly according to State laws.

V. Cost of Living Increases

Pensions may be adjusted at the end of each fiscal year at the discretion of the Board of Trustees and with the approval of the City Commission if investment earnings have exceeded the funding assumption during the prior fiscal year. The amount of adjustment cannot exceed the percentage change in the Consumer Price Index during the preceding calendar year. If adjustments in the 3 previous plan years were less than the change in the CPI, an additional amount up to 4% may be given. Cumulative adjustments cannot have a value greater than net cumulative experience gains or losses from all sources.

W. Deferred Retirement Option Plan (DROP)

Eligibility: A member may enter the DROP on the first day of the month coincident with or next following the earlier of:

Group I Members:

- (1) Age 55 regardless of Credited Service, or
- (2) 30 years of Credited Service regardless of age.

Group II Members: age 65 regardless of Credited Service.

Members who meet eligibility must submit a written election to participate in the DROP at least 3 months prior to the Normal Retirement date; otherwise the member will not be eligible to participate for the maximum period.

Benefit: The member's Credited Service and AME are frozen upon entry into the DROP. The monthly retirement benefit as described under Normal Retirement is calculated based upon the frozen Credited Service and AME.

Maximum

DROP Period: 36 months

Interest

Credited: The member's DROP account is credited with interest in accordance with Subsection 20-110(a.1)(5) of the Code of Ordinances.

Normal Form

of Benefit: Lump Sum; member may also elect that the DROP distribution be rolled over to another qualified retirement plan or any combination of the two options.

COLA:

There are currently no annual cost of living increases, but ad hoc increases may be provided at the discretion of the Board of Trustees along with the approval of the City Commission. Also see Section V, Cost of Living Increases.

X. Other Ancillary Benefits

There are no ancillary retirement type benefits not required by statutes but which might be deemed a City of Fort Lauderdale General Employees' Retirement Plan liability if continued beyond the availability of funding by the current funding source.

Y. Changes from Previous Valuation

There were no plan amendments that had an actuarial impact on the current cost of the Plan.

2043	3	595,771	0	1,263	58,023,113

These projections are based on assumptions involving all decrements. Actual payroll and benefit payouts may differ from the above estimates depending upon actual experience of the plan. However, since the projections are recomputed each valuation date, there is an automatic correction to the extent actual experience varies from expected experience.

Population Projection

Benefit Payment and Payroll Projections

SECTION D

ACTUARIAL COST METHOD, ASSUMPTIONS AND DEFINITIONS

The Actuarial Valuation Process

An actuarial valuation is the mathematical process by which a pension fund contribution requirement is determined and its actuarial condition is measured.

The flow of activity constituting the valuation may be summarized as follows:

- A. **Covered Person Data**, furnished by the fund administrator including:
 - Retired members and beneficiaries now receiving benefits
 - Former members with vested benefits not yet payable
 - Active members
- B. + **Asset Data** (cash & investments), furnished by the System Administrator
- C. + **System Description Data**, furnished by the System Administrator
- D. + **Assumptions about various future activities of the System** (risk elements)
- E. + **The Actuarial Cost Method** for allocating costs to time periods and determining the long-term planned pattern for employer contributions
- F. + **Mathematically combining the Data, the Estimates of Future Activities, and the Cost Method**
- G. = Determination of:
 - Employer Contribution Requirement and Actuarial Condition

Items A, B and C constitute the current “knowns” about the System. A good deal of System activity which will result in benefit payments has yet to occur. Accordingly, certain assumptions must be made about future System activity. These assumptions (Item D) may be classified as demographic or fiscal. Demographic assumptions include future mortality rates, disability rates, rates of pre-retirement withdrawal from employment, and retirement ages. Fiscal assumptions consist of future salary increases and rates of investment return.

Demographic assumptions are generally selected on the basis of the System's historical activity, modified for expected future differences. Past activity of funds which are similar in nature to the fund being valued may be utilized if fund data or activities are insufficient to be reliable.

Fiscal assumptions, on the other hand, do not lend themselves to prediction on the basis of historical activity -- the reason being that both salary increases and investment return are impacted by inflation. Inflation defies reliable prediction. Fiscal assumptions are generally selected on the basis of what would be expected to occur in an inflation-free environment and then both are increased by some provision for long-term inflation.

Once items A, B, C and D are available, the actuarial valuation process begins. The first step is to determine the plan's **total actuarial present value** for individuals in each of the 3 covered person categories.

Retired members now receiving monthly payments;

Vested terminated members not yet at retirement age;

Active members.

The actuarial present value is the value today after taking into account the probabilities of payment and the effect of time, of System promises to pay benefits in the future on the basis of both service already completed and projected future service.

The total actuarial present value is allocated between projected future service and completed service by the actuarial cost method (Item E) -- the **individual entry-age** method is being utilized for this valuation. The portion of the total actuarial present value allocated to projected future service is the **actuarial present value of future normal costs** -- normal costs being the series of annual costs, from entry-age to retirement age, which will accumulate to the actuarial present value of the individual's benefit at the time of retirement or death. The remainder of the total actuarial present value is the actuarial accrued liability.

At this stage, determination has been made of:

1. The total actuarial present value;
2. The actuarial present value of future normal costs; and
3. The actuarial accrued liability.

In the typical fund, the actuarial accrued liability may not be covered by the System's accrued assets -- leaving an ***unfunded actuarial accrued liability***.

The next step in the valuation process is a determination of the ***Actuarial Value of Assets***. The Actuarial Value of Assets phases in the difference between the actual market value investment earnings and the expected actuarial value investment earnings over a period of five years. The Actuarial Value of Assets will be further adjusted to the extent necessary to fall within the corridor whose lower limit is 80% of the Market Value of plan assets and whose upper limit is 120% of the Market Value of plan assets. During periods when investment performance exceeds the assumed rate, Actuarial Value of Assets will tend to be less than Market Value. During periods when investment performance is less than assumed rate, Actuarial Value of Assets will tend to be greater than Market Value.

The following step in the valuation process is a determination of the contribution (Item G) required to support System benefits in accordance with the funding objective.

The contribution is determined in two basic components:

1. The normal cost component; and
2. The component which will finance (pay off) the unfunded actuarial accrued liability over the period indicated on page B-9.

The unfunded actuarial accrued liability is being amortized as a level dollar amount.

Summary of Actuarial Assumptions

Certain decrement assumptions in this valuation were established following the Experience Study Report dated November 2, 2021, covering the period October 1, 2014 through September 30, 2020.

The actuarial estimates regarding the investment return rate, inflation rate, real investment return rate, and salary increase rates are used, in combination with the other estimates, to (i) determine the present value of amounts expected to be paid in the future and (ii) establish contribution amounts which are expected to remain relatively level as a percent of total valuation payroll.

INVESTMENT RETURN. 6.75% per annum, compounded annually; net rate after investment-related expenses.

INFLATION. 2.25% per annum, compounded annually. This is the rate at which growth in the supply of money and credit is estimated to exceed growth in the supply of goods and services. The recent inflation rate as measured by the Consumer Price Index has been:

	Year Ended September 30					Average For Period
	2023	2022	2021	2020	2019	5 Years
Actual	3.7%	8.2%	5.4%	1.4%	1.7%	4.0%
Assumed	2.25%	2.25%	2.50%	2.50%	2.50%	2.40%

NET REAL INVESTMENT RETURN. 4.50% per annum net of investment expenses, compounded annually based on the funding value of assets. This is the rate of return estimated to be produced by investing a pool of assets in an inflation-free environment. Recent real rates of investment return on the funding value of assets have been:

	Year Ended September 30					Average For Period
	2023	2022	2021	2020	2019	5 Years
Net Total Rate	5.3 %	5.2 %	11.1 %	8.3 %	6.5 %	7.3 %
less inflation rate	3.7	8.2	5.4	1.4	1.7	4.0
Actual Real Rate	1.6	-3.0	5.7	6.9	4.8	3.1
Projected Real Rate	4.5	4.5	4.5	4.7	4.8	4.6
Assumed Total Rate	6.75	6.75	7.00	7.20	7.30	7.00

The total investment return rate on the funding value of assets was calculated using an approximation formula which assumes mid-year timing on all cash flows, except that beginning of year timing was assumed for the City contribution.

The preceding investment return rates reflect the particular characteristics of this Retirement System and the method of determining the funding value of assets. They should not be used to measure an investment advisor's performance or for comparison with other retirement systems. Such use will usually mislead.

SALARY INCREASES. Member salaries are estimated to increase between the date of hire and date of retirement. Salary increases occur in recognition of (i) individual merit and seniority and (ii) inflation-related depreciation of the purchasing power of salaries. A schedule of rates of increases in individual salaries for sample service years follows:

SALARY INCREASE ASSUMPTION			
Completed Years of Service	Assumed Inflation	Promotion, Productivity & Seniority	Total Rates
0	2.25%	2.25%	4.50%
1	2.25%	2.25%	4.50%
2	2.25%	2.25%	4.50%
3	2.25%	2.25%	4.50%
4	2.25%	2.25%	4.50%
5	2.25%	2.25%	4.50%
6	2.25%	2.25%	4.50%
7	2.25%	2.25%	4.50%

21	2.25%	1.50%	3.75%
22	2.25%	1.50%	3.75%
23	2.25%	1.50%	3.75%
24	2.25%	1.50%	3.75%
25	2.25%	1.25%	3.50%
26 & Over	2.25%	1.00%	3.25%

A schedule of recent salary change experience, as measured by average reported pay, follows:

	Year Ended September 30					Average for Period
	2023	2022	2021	2020	2019	5 Years
% Change: Actual Average *	5.7 %	4.3 %	4.3 %	4.1 %	3.5 %	4.4 %
Projected	3.7	3.7	4.0	4.0	4.0	3.9
% Change in Total Payroll	(4.7)	(9.8)	(6.1)	(4.8)	(6.0)	(6.3)

The percent change in total payroll represents the change in covered payroll for active members of the Retirement System only, excluding DROP members.

* Based on members active at both the beginning and end of year.

MORTALITY TABLE. *The mortality table* used was The PUB-2010 Headcount Weighted General Below Median Employee Mortality Table (for preretirement mortality) and the PUB-2010 Headcount Weighted General Below Median Healthy Retiree Mortality Table (for post-retirement mortality), with separate rates for males and females and ages set back one year for males, with mortality improvements projected to all future years after 2010 using Scale MP-2018. These are the same rates used for (non-Teacher) Regular Class members in the July 1, 2023 actuarial valuation of the Florida Retirement System (FRS) Pension Plan (based on the 2019 FRS experience study report), in accordance with Florida Statutes Chapter 112.63.

FRS Healthy Pre-Retirement Mortality for Regular Class Members*

Sample Attained Ages (in 2023)	(Active) Probability of		Future Life	
	Dying Next Year		Expectancy (years)	
	Men	Women	Men	Women
50	0.19 %	0.11 %	37.88	40.41
55	0.29	0.17	32.87	35.28
60	0.45	0.26	28.01	30.25
65	0.64	0.37	23.31	25.32
70	0.89	0.56	18.74	20.49
75	1.33	0.92	14.30	15.80
80	2.10	1.55	9.99	11.28

*20% of pre-retirement deaths are assumed to be service-connected.

FRS Healthy Post-Retirement Mortality for Regular Class Members

Sample Attained Ages (in 2023)	(Inactive) Probability of		Future Life	
	Dying Next Year		Expectancy (years)	
	Men	Women	Men	Women
50	0.19 %	0.57 %	33.34	37.13
55	0.95	0.57	28.97	32.68
60	1.12	0.59	24.86	28.13
65	1.28	0.68	20.78	23.53
70	1.78	1.08	16.75	19.05
75	2.83	1.85	13.03	14.86
80	4.74	3.34	9.74	11.09

For disabled retirees, the mortality table used was the PUB-2010 Headcount Weighted General Disabled Retiree Mortality Table, with separate rates for males and females and ages set forward 3 years for both males and females, with no provision being made for future mortality improvements. These are the same rates used for Regular Class members in the July 1, 2023 actuarial valuation of the FRS Pension Plan based on the 2019 FRS experience study report), in accordance with Florida Statutes Chapter 112.63.

FRS Disabled Mortality for Regular Class Members

Sample Attained Ages	Probability of		Future Life	
	Dying Next Year		Expectancy (years)	
	Men	Women	Men	Women
50	2.02 %	1.64 %	20.99	23.92
55	2.53	1.91	18.18	20.88
60	3.08	2.27	15.50	17.88
65	3.93	2.83	12.94	14.91
70	5.08	3.79	10.53	12.07
75	6.98	5.46	8.29	9.45
80	10.12	8.31	6.33	7.19

RATES OF SEPARATION FROM ACTIVE MEMBERSHIP. The rates do not apply to members eligible to retire and do not include separation on account of death or disability. Separation rates are used to measure the probabilities of members remaining in employment.

SEPARATION RATES		
Age	Years of Service	Rates
All	0	27.7%
	1	14.3%
	2	6.7%
	3	6.3%
	4	4.6%
27 & Under	5 & Over	8.75%
28		8.50%
29		8.00%
30		7.75%
31		7.50%
32		7.00%
33		6.75%
34		6.25%
35		6.00%
36		5.50%
37		5.25%
38		4.75%
39		4.50%
40		4.00%
41		3.75%
42		3.50%
43		3.00%
44		2.75%
45		2.25%
46		2.00%
47		1.50%
48		1.25%
49		0.75%
50		0.50%
51		0.25%
52 & Over		0.25%

VESTED MEMBERS who terminate with a benefit worth less than 100 percent of their own accumulated contributions were presumed to elect a refund of accumulated contributions and forfeit the vested benefit.

RATES OF DISABILITY. Disability rates measure the probabilities of active members becoming disabled.

<u>Sample Ages</u>	<u>Percent Becoming Disabled within Next Year</u>
20	0.07 %
25	0.08
30	0.10
35	0.14
40	0.20
45	0.31
50	0.52
55	0.99

RATES OF RETIREMENT. Rates of retirement are used to measure the probabilities of an eligible member retiring during the next year are shown in the table below for Group I members. Additionally, Group II members are assumed to retire with 100% probability at the earlier of age 65 and 35 years of service.

NORMAL RETIREMENT (GROUP I)		
Years of Service	Age	Rates
0 - 29	55 - 59	13%
	60 - 69	13%
	70 - 79	18%
	80 & Over	100%
30 & Over	Under 55	56%
	55 - 59	33%
	60 - 69	25%
	70 & Over	100%

EARLY RETIREMENT (GROUP I)		
Years of Service	Age	Rates
15 - 19	Under 55	5%
20 - 24		3%
25 - 29		1.5%

ADMINISTRATIVE EXPENSES. Administrative expenses are included as an additional employer contribution to provide for reimbursement of these expenses.

ACTIVE MEMBER GROUP SIZE. The valuation was based on a declining active member group size. This is unchanged from previous valuations.

MARITAL STATUS. Ninety percent of active members who meet the age and service requirements for pre-retirement survivor benefits are estimated to be married. Female spouses are assumed to be 3 years younger than the male member. Male spouses are assumed to be 3 years older than the female member.

DATA ADJUSTMENTS. Where complete participant data was not available, we have used data assumptions which we believe are reasonable and internally consistent.

CHANGES IN ASSUMPTIONS/METHODS. None.

The amortization period for new Unfunded Actuarial Accrued Liability (UAAL) bases was lowered from 20 years to 19 years and will continue to be lowered by one year for each year in the future.

Definitions of Technical Terms

ACCRUED SERVICE. Service credited under the system which was rendered before the date of the actuarial valuation.

ACTUARIAL ACCRUED LIABILITY. The difference between the actuarial present value of future benefit payments and the actuarial present value of future normal costs. Also referred to as “accrued liability” or “past service liability.”

ACTUARIAL COST METHOD. A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future benefit payments” between future normal costs and actuarial accrued liability. Sometimes referred to as the “actuarial valuation cost method.”

ACTUARIAL EQUIVALENT. A single amount or series of amounts of equal actuarial present value to another single amount or series of amounts, computed on the basis of appropriate actuarial assumptions.

ACTUARIAL PRESENT VALUE. The amount of funds currently required to provide a payment or series of payments in the future. It is determined by discounting future payments at predetermined rates of interest, and by probabilities of payment. Also referred to as “present value.”

AMORTIZATION. Paying off an interest-discounted amount with periodic payments of interest and principal -- as opposed to paying it off with a lump sum payment.

EXPERIENCE ESTIMATES (ASSUMPTIONS). Estimates of expected future experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement estimates (rates of mortality, disability, turn-over and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic estimates (salary increases and investment income) consist of the underlying rates in an inflation-free environment plus a provision for a long-term average rate of inflation.

EXPERIENCE GAIN/(LOSS). The difference between actual actuarial costs and assumed actuarial costs -- during the period between two valuation dates.

FUNDING VALUE OF ASSETS. The value of assets derived by spreading the difference between actual investment return and expected investment return on the prior year funding value in equal dollar installments over five years. This treatment removes the timing of investment activities from the valuation process.

NORMAL COST. The actuarial cost allocated to the current year by the actuarial cost method. Sometimes referred to as “current service cost.”

UNFUNDED ACTUARIAL ACCRUED LIABILITY. The difference between actuarial accrued liability and the actuarial value of system assets. Sometimes referred to as “unfunded past service liability”, “unfunded accrued liability” or “unfunded supplemental present value.” Most retirement systems have unfunded actuarial accrued liability. It arises each time new benefits are added and each time an experience loss is realized. The existence of unfunded actuarial accrued liability is not in itself bad, any more than a mortgage on a house is bad. Unfunded actuarial accrued liability does not represent a debt that is payable today. What is important is the ability to control the amount of unfunded actuarial accrued liability and the trend in its amount (after due allowance for devaluation of the dollar).

GASB Statement No. 67

Notes to Schedule of Employer's Net Pension Liability

Valuation Date: September 30, 2023
 Measurement Date: September 30, 2024

Methods and Assumptions Used to Determine Net Pension Liability:

Roll Forward Procedures	The Total Pension Liability was developed by using standard actuarial techniques to roll-forward amounts from the actuarial valuation one year to the measurement date.
Experience Studies	The most recent experience study was completed in November 2021. This experience study examined actual demographic experience during the six-year period from October 1, 2014 through September 30, 2020. Based on the results of this experience study, assumption changes were implemented effective with the September 30, 2021 actuarial valuation.
Inflation	2.25%
Salary Increases	3.25% to 4.50% depending on service, including inflation
Investment Rate of Return	6.75%
Retirement Age	Experience-based table of rates that are specific to the type of eligibility condition.
Mortality	Mortality rates are the same as used by the Florida Retirement System (FRS) for Regular Class (non-Teacher) members in their July 1, 2023 actuarial valuation. These rates were taken from the PUB-2010 Headcount-Weighted Mortality Tables and adjusted to reflect FRS' experience. Mortality improvements to all future years after 2010 are generationally projected using Scale MP-2018. Adjustments to the published mortality tables were developed in a statewide experience study conducted for the FRS covering the period 2013 through 2018. F.S. 112.63(1)(f) requires the mortality assumption to be the same as used in either of the two most recently published actuarial valuation reports of the Florida Retirement System. For more information regarding these rates, refer to the July 1, 2023 actuarial valuation report of the FRS Pension Plan.

GASB Statement No. 67

Notes to Schedule of Contributions

Valuation Date: September 30, 2022
Notes Actuarially determined contributions are calculated as of September 30, which is two years prior to the end of the fiscal year in which contributions are reported.

Methods and Assumptions Used to Determine Contribution Rates:

Actuarial Cost Method	Entry Age Normal
Amortization Method	Level Dollar, Closed
Remaining Amortization Period	20 years
Asset Valuation Method	5-year smoothed market
Inflation	2.25%
Salary Increases	3.25% to 4.50% depending on service, including inflation
Investment Rate of Return	6.75%
Retirement Age	Experience-based table of rates that are specific to the type of eligibility condition.
Mortality	Mortality rates are the same as used by the Florida Retirement System (FRS) for Regular Class (non-Teacher) members in their July 1, 2022 actuarial valuation. These rates were taken from the PUB-2010 Headcount-Weighted Mortality Tables and adjusted to reflect FRS' experience. Mortality improvements to all future years after 2010 are generationally projected using Scale MP-2018. Adjustments to the published mortality tables were developed in a statewide experience study conducted for the FRS covering the period 2013 through 2018. F.S. 112.63(1)(f) requires the mortality assumption to be the same as used in either of the two most recently published actuarial valuation reports of the Florida Retirement System. For more information regarding these rates, refer to the July 1, 2022 actuarial valuation report of the FRS Pension Plan.

Other Information:
Notes Summary of Valuation Results in the September 30, 2022 Actuarial Valuation Report dated March 17, 2023.

GASB Statement No. 67 Single Discount Rate

A single discount rate of 6.75% was used to measure the total pension liability. This single discount rate was based on the expected rate of return on pension plan investments of 6.75%. The projection of cash flows used to determine this single discount rate assumed that plan member contributions will be made at the current contribution rate and that employer contributions will be made at rates equal to the difference between the total actuarially determined contribution rates and the member rate. Based on these assumptions, the pension plan's fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the long-term expected rate of return on pension plan investments (6.75%) was applied to all periods of projected benefit payments to determine the total pension liability.

Regarding the sensitivity of the net pension liability to changes in the single discount rate, the following presents the plan's net pension liability, calculated using a single discount rate of 6.75%, as well as what the plan's net pension liability would be if it were calculated using a single discount rate that is 1-percentage-point lower or 1-percentage-point higher:

Sensitivity of the Net Pension Liability to the Single Discount Rate Assumption*

1% Decrease	Current Single Discount Rate Assumption	1% Increase
5.75%	6.75%	7.75%
\$143,753,223	\$64,915,189	(\$2,050,858)

* These figures are estimates projected to September 30, 2024. Actual figures will be provided after the end of the fiscal year.
