RE: Prospect Lake Clean Water Center Project – City-Initiated Changes

CHANGE PROPOSAL

Reference is hereby made to that certain Comprehensive Agreement, dated as of February 14, 2023 (as amended or otherwise modified from time to time, the "Comprehensive Agreement") between, *inter alia*, Prospect Lake Water, L.P. (the "Project Company" or "we") and the City of Fort Lauderdale, Florida (the "City" or "you"). Except as otherwise expressly provided herein, capitalized terms used and not defined herein shall have the meanings ascribed to such terms in the Comprehensive Agreement, and, if not defined therein, the DB Contract.

We acknowledge that we are in receipt of your Request for Change Proposal – City Obligations: 54-inch feedstock watermain dated April 1, 2024 (the "Request for Change Proposal") and, further to our subsequent discussions with you and your consultants, we understand that at this time the City has requested the Project Company to implement the City Changes described in Section 1 (*Description of City Changes*) below. This is a Change Proposal under Section 8.04(a) of the Comprehensive Agreement, which relates to such City Changes. Upon the City's execution and delivery of this Change Proposal (such date, the "Effective Date"), this Change Proposal shall (a) constitute the agreement of the City and the Project Company required by Section 8.02(c) (*City-Initiated Changes*) of the Comprehensive Agreement in respect of such City Changes, (b) amend the Comprehensive Agreement and become a valid and binding part of the Comprehensive Agreement, and all other terms and conditions of the Comprehensive Agreement shall remain in full force and effect, as amended by this Change Proposal, and (c) supersede all prior agreements and arrangements between the Parties, whether oral or in writing, regarding the subject matter of this Change Proposal, including that certain Change Order No. 4 for Project No. 12765, dated June 3, 2024.

1. Description of City Changes

In the Request for Change Proposal, you instruct us to prepare a proposal to install the 54-inch Feedstock Water main set out in Annex B-1 (*City Infrastructure Obligations*) to the Comprehensive Agreement as a City Infrastructure Obligation (the "Feedstock Water Main").

Attached to this Change Proposal as Annex I is the DB Contractor's proposal to undertake and complete the Feedstock Water Main in accordance with the scope, timeline and assumptions set out therein (the "FWM SOW").

By executing and delivering this Change Proposal, you acknowledge and agree, consistent with Attachment 1A to the FWM SOW, that:

(a) your representation on April 25, 2024 that there are valves at each end of the interconnecting pipe that can be closed to remove the pipe in between and allow the Feedstock Water Main to be installed is true and correct;

(b) no permits from FDEP are required for the performance of the FMW SOW that have not already been obtained by the City, all of which permits are in full force and effect. Any such FDEP permit shall constitute a permit that the City is responsible for obtaining and maintaining and be deemed specified in Section 4.01(c) to the Comprehensive Agreement;

(c) (i) the City has commissioned the FWM Design (as defined in Attachment 1A to the FWM SOW) from a service provider selected by the City in the City's discretion; (ii) Project Company shall have no liability or responsibility for any defect, flaw, inoperability, inadequacy, errors, omissions or other adverse condition or aspect of the FWM Design; (iii) Project Company shall retain all of the Project Company's rights under the Comprehensive Agreement in connection with a Relief Event set out in clause (xviii) of the definition of Relief Event, except to the extent arising from the Project Company's failure to comply with the FWM SOW; and (iv) from and after the Effective Date, the definition of Work in the Comprehensive Agreement shall include the FWM Work (as defined in Attachment 1A to the FWM SOW) but shall continue to exclude all other City Infrastructure Obligations;

(d) the Project Company shall provide written notice to the City when the Project Company believes it has completed the FWM Work in accordance with this Change Proposal ("**FWM Completion Notice**"). Within five Business Days following delivery of the FWM Completion Notice, the City will inspect the FWM Work and (i) deliver to the Project Company the City's written acknowledgment that the FWM Work has been completed, or (ii) notify the Project Company in writing that the FWM Work has not been completed, stating in detail the reasons therefor. In the case of (ii), the Project Company may withdraw the FWM Completion Notice and resubmit such notice at a later date; *provided, that* if the Project Company does not agree with such written notice provided by the City, the Project Company may refer the disagreement for resolution in accordance with the Dispute Resolution Procedure; and

(e) this Change Proposal amends Annex B-1 (*City Infrastructure Obligations*) to the Comprehensive Agreement to reduce the scope thereof and transfer such reduced scope to Annex B-2 (*City Enabling Work*) to the Comprehensive Agreement providing for the enabling works to be performed by the Project Company at the request of the City. Therefore, on and after the Effective Date, Annex B-1 (*City Infrastructure Obligations*) to the Comprehensive Agreement shall be in effect in the form attached here to as Annex II and Annex B-2 (*City Enabling Work*) to the Comprehensive Agreement shall be in effect in the form attached here to as Annex III.

2. Description of the Impact on the Project of the Requested City Changes

a. Extra Work Costs

1. **Feedstock Water Main Design (the "FWM Design"):** Attachment 1B hereto contains the drawings for the FWM Design. In the case of any conflicts between the FWM Design and this Attachment 1A, this Attachment 1A shall prevail. Kiewit and the Project Company acknowledge and agree that:
    a. the City has commissioned the FWM Design from a service provider selected by the City in the City's discretion as part of the City Infrastructure Obligations under the Comprehensive Agreement;

    b. Kiewit assumes no liability or responsibility for any defect, flaw, inoperability, inadequacy, errors, omissions or other adverse condition or aspect of the FWM Design; and
    c. From and after the effective date of the Scope Change Order associated with the FWM Work, the definition of Work in the DB Contract shall include the FWM Work but shall continue to exclude all other City Infrastructure Obligations.

2. **Engineering Standard:** In the performance of the FWM Work, Kiewit shall comply with the City Engineering Standard Details as applicable, which are available on the date hereof at: https://www.fortlauderdale.gov/government/departments-a-h/development-services/building-services/engineering-permits/city-engineering-standard-details.

    The Parties acknowledge and agree that the City Engineering Standard Details shall constitute Applicable Law and Project Requirements solely with respect to the FWM Work and shall not apply to the Project.

    No other standards are included in the refence to "City of Fort Lauderdale Design Standards and Specifications (Latest Version)" in General Note no. 38 in the FWM Design.

3. **Sequence of Work:** Notwithstanding anything to the contrary in the FWM Design, Kiewit shall determine the sequence of work in accordance with the Project Requirements and shall be allowed to remove or leave in place the existing interconnecting pipe at its sole discretion; *provided that* Kiewit shall be entitled to rely on the City's response on April 25, 2024 that there are valves at each end of the interconnecting pipe that can be closed and that closure of the valves is adequate to sufficiently stop the flow to allow for removal of the pipe in between and allow the Feedstock Water Main to be installed.

4. **SWPPP:** The site-specific stormwater pollution prevention plan (SWPPP) for the FWM Work will be an extension of the SWPPP for the Project and covered under the notice of intent (NOI) for the Project.

5. **Silt Fence:** No silt fence shall be required as part of the FWM Work to the extent silt fence is installed by Kiewit as part of the Project in the area where the 54-inch ductile iron pipe (DIP) is to be installed in accordance with the FWM Design.

6. **Corrosion Protection Measures:** Note on Water Separation no. 10 in the FWM Design does not require cathodic protection or any additional corrosion protection measures unless explicitly called out in the design.

7. **Bacteriological Sampling Points:** The FWM includes three bacteriological sampling points, one at each connection point to existing pipe and one at the north end of the pipe.

8. **Cast Iron Products:** No H-20 loading is required as the FWM Work is not being undertaken on a roadway.

9. **Metallic Warning Tape Specification 2320:** Kiewit shall use the 7900 EMS Warning Tape in accordance with the specifications attached hereto as Attachment 1C.

10. **Geotechnical Investigation Report:** The FWM Work is based on the information contained in the Geotechnical Investigation. If conditions differ materially from the conditions identified in the Geotechnical Investigation, Kiewit shall be entitled to claim a Relief Event in accordance with the terms of the Comprehensive Agreement. The Report of Geotechnical Exploration dated February 18, 2024, which is referenced in Earthwork Note No. 20 of the FWM Design, is attached hereto as Attachment 1D.

11. **Non-Public Access Areas: Kiewit shall undertake the FWM Work in non-public access areas and, therefore:**

    a. Notwithstanding anything to the contrary in the FWM Design, Kiewit shall not be required to provide a plan for staging or storage of materials or a plan demonstrating path of construction equipment travel;

    b. General Notes no. 33, 34 and 36 in the FWM Design shall not apply;

    c. The references to the manual on uniform traffic control devices (latest version), the Florida Department of Transportation design standards and specifications (latest edition) and the Broward County Traffic Engineering Division in General Note no. 38 in the FWM Design shall not apply.

    d. Notwithstanding anything to the contrary in the FWM Design, Kiewit shall not be required to submit a maintenance of traffic (MOT) plan and shall have no responsibility in respect of maintenance of access for such non-public access areas.

12. **Pavement Restoration:** Kiewit shall not be required to undertake pavement restoration and restoration of pavement markings if the FWM Work is performed prior to the installation of the road that is part of the Project.

13. **Grass Areas Restoration:** Notwithstanding anything to the contrary in the FWM Design, the FWM Work does not comprise any grass area restoration.

14. **Pavement Preparation:** Notwithstanding anything to the contrary in the FWM Design, the lift thickness and compaction requirements set out therein shall not apply to the extent Kiewit performs pavement preparation at the time Kiewit installs pavement for the Project.

15. **Access to City's Facilities:** Notwithstanding anything to the contrary in the FWM Design, Kiewit is required to maintain access only to the City's facilities on the site where the Feedstock Water main is to be located in accordance with the FWM Design.

16. **As-Built Drawings:** Any as-built drawings required to be submitted by Kiewit pursuant to the FWM Design shall consist of a redline mark-up of the drawings included in the FWM Design, which redline shall be certified by a state of Florida-registered surveyor and mapper. Signed and Sealed Hard Copies of Complete As-Built Drawings shall be the responsibility of the Engineer.

17. **Utilities:** If Kiewit encounters any utilities that are not specified in the FWM Design, or if the required depths and separation to existing utilities for the pipe routing are not as specified in the FWM Design, Kiewit shall be entitled to claim a Relief Event in accordance with the terms of the Comprehensive Agreement.

18. **Drawing D-3:** Drawing no. D-3 in the FWM Design Plan does not apply as there shall be no meter.

19. **Hazardous Materials:** General Note no. 44 in the FWM Design shall not apply. For the avoidance of doubt, Kiewit's rights and obligations with respect to hazardous materials will be as set out in the Comprehensive Agreement and the DB Contract.

20. **Shop Drawings:** The shop drawings required by General Note no. 24 in the FWM Design shall be limited to shop drawings for valves, piping, fittings, backfill and tracer wire.

21. **FDEP Permits:** Kiewit shall not be required to procure any FDEP permit required for the performance of the FWM Work.

22. **Excavated Material:** Notwithstanding anything to the contrary in the FWM Design, Kiewit may use excavated materials elsewhere in the performance of the DB Work for the Project or distribute excavated materials on the Site in the manner specified in the Comprehensive Agreement.

23. **Completion Timeline:** The completion of this feedstock water main scope of work is required no later than July of 2025 per our current CPM schedule. This Raw Water line provides the flushing water for some of the initial commissioning activities. The current quoted procurement durations for ductile iron pipe, valves, and fittings are up to 6 months from date of purchase order. To meet this July commissioning schedule, a fully approved and executed change order must be received no later than November 1st, 2024. The FWM Work, including procurement of materials is scheduled to be completed within 270 calendar days from execution of this Change Order, subject to the rights and remedies of the parties under the DB Contract to Changes, Relief Events, and extension of time, as may be applicable during performance. Kiewit shall provide written notice to the Project Company when Kiewit believes it has completed the FWM Work in accordance with this Scope Change Order ("**FWM Completion Notice**"). Within five Business Days following delivery of the FWM Completion Notice, the Project Company will inspect the FWM Work and (i) deliver to Kiewit the Project Company's written acknowledgment that the FWM Work has been completed, or (ii) notify Kiewit in writing that the FWM Work has not been completed, stating in detail the reasons therefor. In the case of (ii), Kiewit may withdraw the FWM Completion Notice and resubmit such notice at a later date; *provided, that* if Kiewit does not agree with such written notice provided by the Project Company, Kiewit may refer the disagreement for resolution in accordance with Article XIX (*Dispute Resolution*) of the DB Contract.

3. IN WHICH Q EQUAL THE ALLOWABLE LEAKAGE IN GALLONS PER HOUR: L = LENGTH OF LINES IN FEET: D = DIAMETER OF LINES IN INCHES: AND P IS THE AVERAGE TEST PRESSURE DURING THE LEAKAGE TEST, IN POUNDS PER SQUARE INCH. THE TEST SHALL BE MAINTAINED FOR A TWO (2) HOUR DURATION, BUT IT MAY BE CONTINUED FOR ONE (1) ADDITIONAL HOUR IF IT BECOMES APPARENT THAT THE LEAKAGE IS EQUAL TO OR GREATER THAN THE AMOUNT ALLOWABLE. WATER SUPPLIED TO THE MAIN DURING THE TEST TO MAINTAIN THE REQUIRED PRESSURE SHALL BE MEASURED BY A 5/8 INCH METER INSTALLED. ON THE DISCHARGE SIDE OF THE TEST PUMP, OR BY PUMPING FROM A CALIBRATED CONTAINER. A HOSE BIBB CONNECTION WILL BE PROVIDED TO ACCEPT THE TEST GAUGE SUPPLIED BY THE CITY OF FORT LAUDERDALE. THE SECTION OF THE MAIN BEING TESTED SHALL BE LIMITED TO A MAXIMUM LENGTH OF 2,000 F

4. SILT FENCES SHALL BE REPAIRED TO THEIR ORIGINAL CONDITIONS IF DAMAGED SEDIMENT SHALL BE REMOVED FROM THE FENCES WHEN IT REACHES ONE-HALF THE HEIGHT OF THE SILT FENCE.
5. THE CONSTRUCTION ENTRANCES SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOW OF MUD ONTO PUBLIC RIGHTS-OF-WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING OF THE CONSTRUCTION ENTRANCES AS CONDITIONS DEMAND.
6. THE TEMPORARY PARKING AND STORAGE AREA SHALL BE KEPT IN GOOD CONDITION (SUITABLE FOR PARKING AND STORAGE). THIS MAY REQUIRE PERIODIC TOP DRESSING ON THE TEMPORARY PARKING AS CONDITIONS DEMAND.
7. OUTLET STRUCTURES IN THE SEDIMENTATION BASINS SHALL BE MAINTAINED IN OPERATIONAL CONDITIONS AT ALL TIMES. SEDIMENT SHALL BE REMOVED FROM SEDIMENT BASINS OR TRAPS WHEN THE DESIGN CAPACITY HAS BEEN REDUCED BY 50%.
8. IF CONTAMINATED SOIL OR GROUNDWATER IS ENCOUNTERED DURING CONSTRUCTION, THE CONTRACTOR IS TO CEASE OPERATIONS IN THAT AREA. THE CONTRACTOR SHALL CONTACT THE ENGINEER WHO WILL NOTIFY THE BROWARD COUNTY ENVIRONMENTAL PROTECTION AND GROWTH MANAGEMENT DEPARTMENT.

SHEET FLOW APPLICATION: SILT FENCE

THIS SEDIMENT BARRIER USES STANDARD STRENGTH OR EXTRA STRENGTH SYNTHETIC FILTER FABRICS. IT IS DESIGNED FOR SITUATIONS IN WHICH ONLY SHEET OR OVERLAND FLOWS ARE EXPECTED.

1. THE HEIGHT OF A SILT FENCE SHALL NOT EXCEED 36 INCHES (90 cm). HIGHER FENCES MAY IMPOUND VOLUMES OF WATER SUFFICIENT TO CAUSE FAILURE OF THE STRUCTURE.
2. THE FILTER FABRIC SHALL BE PURCHASED IN A CONTINUOUS ROLL CUT TO THE LENGTH OF THE BARRIER TO AVOID THE USE OF JOINTS. WHEN JOINTS ARE NECESSARY, FILTER CLOTH SHALL BE SPLICED AS DESCRIBED IN ITEM NO. 8 BELOW.
3. POSTS SHALL BE SPACED A MAXIMUM OF 10 FEET (3 m) APART AT THE BARRIER LOCATION AND DRIVEN SECURELY INTO THE GROUND A MINIMUM OF 12 INCHES (30 cm). WHEN EXTRA STRENGTH FABRIC IS USED WITHOUT THE WIRE SUPPORT FENCE, POST SPACING SHALL NOT EXCEED 6 FEET (1.8 m).
4. A TRENCH SHALL BE EXCAVATED APPROXIMATELY 4 INCHES (10cm) WIDE AND 4 INCHES (10 cm) DEEP ALONG THE LINE OF POSTS AND UPSLOPE FROM THE BARRIER.
5. WHEN STANDARD STRENGTH FILTER FABRIC IS USED, A WIRE MESH SUPPORT FENCE SHALL BE FASTENED SECURELY TO THE UPSLOPE SIDE OF THE POSTS USING HEAVY DUTY WIRE STAPLES AT LEAST 1 INCH (25 mm) LONG, TIE WIRES, OR HOG RINGS. THE WIRE SHALL EXTEND INTO THE TRENCH A MINIMUM OF 2 INCHES (5 cm) AND SHALL NOT EXTEND MORE THAN 36 INCHES (90 cm) ABOVE THE ORIGINAL GROUND SURFACE.
6. THE STANDARD STRENGTH FILTER FABRIC SHALL BE STAPLED OR WIRED TO THE FENCE, AND 8 INCHES (20 cm) OF THE FABRIC SHALL BE EXTENDED INTO THE TRENCH. THE FABIRC SHALL NOT EXTEND MORE THAN 36 INCHES (90 cm) ABOVE THE ORIGINAL GROUND SURFACE.
7. WHEN EXTRA STRENGTH FILTER FABRIC AND CLOSER POST SPACING ARE USED, THE WIRE MESH SUPPORT FENCE MAY BE ELIMINATED. IN SUCH A CASE, THE FILTER FABRIC IS STAPLED OR WIRED DIRECTLY TO THE POSTS WITH ALL OTHER PROVISIONS OF ITEM NO. 6 APPLYING.
8. WHEN ATTACHING TWO SILT FENCES TOGETHER, PLACE THE END POST OF THE SECOND FENCE INSIDE THE END POST OF THE FIRST FENCE. ROTATE BOTH POSTS AT LEAST 180 DEGREES ON A CLOCKWISE DIRECTIONS TO CREATE A TIGHT SEAL WITH THE FILTER FABRIC. DRIVE BOTH POSTS INTO THE GROUND AND BURY THE FLAP.
9. THE TRENCH SHALL BE BACKFILLED AND THE SOIL COMPACTED OVER THE FILTER FABRIC.
10. THE MOST EFFECTIVE APPLICATION CONSISTS OF A DOUBLE ROW OF SILT FENCES SPACED A MINIMUM OF THREE FEET APART. THE THREE FOOT SEPARATION IS SO THAT IF THE FIRST ROW COLLAPSES IT WILL NOT FALL ON THE SECOND ROW. WIRE OR SYNTHETIC MESH MAY BE USED TO REINFORCE THE FIRST ROW.
11. WHEN USED TO CONTROL SEDIMENTS FROM A STEEP SLOPE, SILT FENCES SHOULD BE PLACED AWAY FROM THE TOE OF THE SLOPE FOR INCREASED HOLDING CAPACITY.
12. SILT FENCES SHALL BE REMOVED WHEN THEY HAVE SERVED THEIR USEFUL PURPOSE, BUT NOT BEFORE THE UPSLOPE AREA HAS BEEN PERMANENTLY STABILIZED.

Metallic Warning Tape Specification

[*Attached*]

3M EMS Path Marking Warning Tape – Water, Wastewater, Reclaim

1. Specifications

a. All underground pressure pipe shall have electronically detectable Path Marking Warning Tape installed above it.
b. The Path Marking Warning Tape shall be made of polyethylene (or approved equivalent) material, 6-inches wide and a minimum of 11 millimetres thick.
c. The Path Marking Warning Tape shall have detectable RFID Markers embedded in the tape every eight feet to provide a continuous path to allow for easy detection at any point along the pipe. The signal should be such that it will provide guidance on the direction of the tape.

    1. RFID Frequencies shall be as follows:
        1. Water: 73.5 kHZ
        2. Wastewater: 41.4 kHz
        3. Reclaim Water: 44.9 kHz

d. The Path Marking Warning Tape shall be able to function and be detected without the need for a direct connection to an external power source (e.g. no access points needed), which will allow for a quicker detection at any point along the path.
e. Each detectable RFID marker embedded in the Path Marking Warning Tape functions independently so that even if a section of tape is removed, the remaining marked sections will continue to function.
f. Path Marking Warning Tape must be able to provide a depth measurement using an underground cable/pipe locator.
g. The Path Marking Warning Tape will not require grounding.
h. Path Marking Warning Tape shall be Blue, Green or Purple in color and shall be printed on one side in black letters (Typical for all lettering) and shall be as follows: “CAUTION WATER (or Sewer or Reclaim) LINE BURIED BELOW” (or an approved equivalent wording). The wording shall be repetitive along the full length of the tape.
i. Path Marking Tape shall be detectable at a maximum of 48” below grade regardless of soil composition.
j. Approved Manufacture: 3M Electronic Marking System (EMS) Path Marking Warning Tape.

2. Installation

a. Path Marking Warning Tape shall be installed continuously and longitudinally above and along all water, wastewater and reclaim pressure mains and services for new construction and for any repair or retrofit construction using open trench methods, for identification and detection purposes.

b. For service connections, the Path Marking Warning Tape shall extend from the main line to the meter.

c. The Path Marking Warning Tape shall be installed directly above the center of the pipe and at least 16-inches deep from final grade to a maximum depth of 48-inches below final grade.

d. The contractor shall exercise care to prevent damage to the Path Marking Warning Tape when placing the remaining backfill.

3M™ EMS Warning Tape 7900 Series

Data Sheet

The 7900 Series EMS Warning Tape is engineered to provide visual verification of underground utilities and can include the following additional features:

7900 EMS Warning Tape – Includes an EMS marker laminated between two pieces of film.

The RF technology does not require an electrically continuous path to provide detection in places where the tape has been damaged or detection where it is prohibitive to have an electrical path.

Re: Report of Geotechnical Exploration
Event 50
12765 Prospect Lake WTP Enabling Works
New Raw Water Main to WTP
Fort Lauderdale, FL

Dear Mr. Davila:

Pan Geo Consultants, LLC (PGC) has performed a limited geotechnical exploration for the above proposed construction. The purpose of this exploration was to obtain information concerning the site and subsurface conditions at specific locations in order to provide site preparation and recommendations for support of the proposed construction. This report presents our findings and recommendations.

PROJECT INFORMATION

Based on our conversations with you and review of materials provided, we understand that plans for this project call for the design of a new 54-inch raw water supply line from the existing Prospect Wellfield to the connection point to the new Prospect Lake Clean Water Center (official name of the WTP).

PGC should be notified in writing by the client of any changes in the proposed replacement along with a request to amend our foundation analysis and/or recommendations within this report as appropriate.

GENERAL SUBSURFACE CONDITIONS

Subsurface Soil Exploration

The exploration of subsurface conditions included site observation and three (3) standard penetration test borings (SPT) in general accordance with ASTM D-1586 specifications to depths of fifteen feet. The approximate locations of the soil borings are shown on the attached Test Location plan, presented in the Appendix. The engineer may have adjusted the locations in the field due to site restrictions and/or utilities. As such, locations should be considered approximate.

Test Boring Results

The test borings performed for this project generally revealed a surficial layer of topsoil to a depth of approximately one foot, underlain by loose to medium dense sand and trace limestone fragments to depths of approximately eight to eleven feet. Below this layer, medium hard to very hard limestone was noted to approximately fifteen feet, the maximum depth explored. Additional information is shown on the boring logs, presented in the Appendix of this report.

Special Note: During excavation, zones of hard to very hard limestone may be encountered which may not have been shown in the test borings. If these zones are encountered, we should be notified in order to further evaluate subsurface conditions. Shoring procedures should conform to those presented in the Occupational Safety and Health Administration (OSHA) standards.

Representative samples collected from the SPT borings were visually reviewed in the laboratory by a geotechnical engineer to confirm the field classifications. A detailed description of the soil/rock profile is presented in the test boring records provided in the Appendix. The Standard Penetration Test N-values are used to evaluate the relative density of granular soils.

Groundwater Information

During the performance of the soil borings, the groundwater level was not encountered within the sampling depth.

The immediate depth to groundwater measurements presented in this report may not provide a reliable indication of stabilized or long-term depth to groundwater at this site. Water table elevations can vary dramatically with time through rainfall, droughts, storm events, flood control activities, nearby surface water bodies, tidal activity, pumping and many other factors. For these reasons, this immediate depth to water data **should not** be relied upon alone for project design considerations.

Further information regarding stabilized groundwater elevations at the site could be developed upon specific request. Additional evaluation might include monitoring of piezometers, survey of the project area for evidence of current groundwater elevation influences such as well fields, obvious construction dewatering, tidal activity, flood control canals and other surface water bodies.

ANALYSIS AND RECOMENDATIONS

The test borings performed for this project revealed a soil profile consisting principally of sand and limestone formation. The proposed pipe may be supported on the existing soils utilizing typical construction methods.

In the case peat or silt materials are encountered within the pipe bedding area, the bedding should be over-excavated to at least 6 inches or two pipe diameters below the proposed pipe, whichever is greater. Backfill should be performed in accordance with the recommendations presented herein or as specified by the civil engineer. Sand and/or limestone fragments encountered above the unsuitable material layer may be stockpiled for later use.

The following table may be used for design. We note that the values in the table are based on visual classification and if more exact values are needed, specific laboratory testing should be performed. We note that the sand, limestone fragments, and sand/limestone mixtures should be considered to be cohesionless. Appropriate factors of safety should be applied by the design engineer depending on the application. We are available to assist in the design process if needed.

TABLE OF SOIL PARAMETERS

SOIL DESCRIPTION	SOIL UNIT WEIGHT (PCF)		ANGLE OF INTERNAL FRICTION (DEGREES)	SHEAR MODULUS (KSI)	EARTH PRESSURE COEFFICIENT		
	SATURATED	SUB-MERGED			AT REST (Ko)	ACTIVE (Ka)	PASSIVE (Kp)
SAND	105-110	43-48	28-33	0.25-0.30	0.5	0.33	3.0
LIMESTONE	120-125	58-63	40-45	0.3-1.0	0.36	0.22	4.6

Backfill Recommendations

Fill needed to bring the site back to grade may be placed in lifts not exceeding twelve inches in loose thickness. Each lift should be thoroughly compacted until densities equivalent to at least 98 percent of the modified Proctor maximum dry density (ASTM D-1557/AASHTO T-180) are uniformly obtained. Fill should consist of granular soil, with less than ten percent passing the No. 200 sieve, free of rubble, organics (five percent or less) clay, debris and other unsuitable material. Backfill above the pipe invert elevation should be performed as per the civil engineer.

The fill should have ASTM designation (D-2487) of GP, GW, SP, or SW, with a maximum particle size of no more than three inches or as otherwise approved by the geotechnical engineer.

Pavements

The following would apply within pavement areas which require repair. A stabilized subgrade having a minimum LBR of 40 shall be placed to a depth of at least twelve inches below the base course. The stabilized subgrade should be compacted to an equivalent density of 98 percent of the modified Proctor maximum dry density. The base course should be placed to at least twelve inches below the asphalt and should have a minimum LBR of 100. The base material should be compacted to 98 percent of

the modified Proctor maximum dry density. The pavement material and thickness should be based on design requirements.

The contents of this report are for the exclusive use of the client, the client's design & construction team and governmental authorities for this specific project exclusively. Information conveyed in this report shall not be used or relied upon by other parties or for other projects without the expressed written consent of PGC.

This report discusses geotechnical considerations for this site based upon observed conditions and our understanding of proposed construction for foundation support. Environmental issues including (but not limited to), soil and/or groundwater contamination are beyond our scope of service for this project. As such, this report shall not be used or relied upon for evaluation of environmental issues.

Prior to initiating compaction operations, we recommend that representative samples of the structural fill material to be used and acceptable in-place soils be collected and tested to determine their compaction and classification characteristics. The maximum dry density, optimum moisture content, gradation and plasticity characteristics should be determined. These tests are needed for compaction quality control of the structural fill and existing soils, and to determine if the fill material is acceptable.

If conditions are encountered which are not consistent with the findings presented in this report, or if proposed construction is moved from the location investigated, this office shall be notified in writing immediately so that the condition or change can be evaluated and appropriate action taken.

PGC shall bear no liability for the implementation of recommended inspection and testing services as described in this report if implemented by others. PGC has no ability to verify the completeness, accuracy or proper technique of such procedures if performed by others.

Excavations of five feet or more in depth should be sloped or shored in accordance with OSHA and State of Florida requirements.

The Geotechnical Engineer warrants that the findings, recommendations, specifications, or professional advice contained herein, have been presented after being prepared in accordance with general accepted professional practice in the field of foundation engineering, soil mechanics and engineering geology. No other warranties are implied or expressed.

We appreciate the opportunity to provide these services for you and look forward to completing this and other projects with you. If we can be of any further assistance with the design or construction services, or if you need additional information, please feel free to contact us at your convenience.

Sincerely,
