City of Fort Lauderdale

NET ZERO PLAN

March 4, 2025

City Commission Conference Meeting

Prepared by:

In partnership with the City of Fort Lauderdale

Net Zero, Simply Stated:

When the amount of greenhouse gases (GHG) produced equals the amount removed from the atmosphere.

Achieving it requires cutting carbon emissions through various means to the extent practical, with the remainder managed so they can be absorbed and retained by nature, and other removal measures, leaving zero emissions in the atmosphere.

This is Fort Lauderdale's TIME TO LEAD

HOW NET ZERO WILL BENEFIT FORT LAUDERDALE

- Reducing greenhouse gas (GHG) emissions reduces other emissions that are harmful to public health.
- Lowering energy needs lowers costs to the City and its residents.

WATER AND WASTEWATER

- Boosting energy efficiency by using renewable energy at the City's water and wastewater facilities lowers operational costs, reduces energy consumption, and decreases GHG emissions, saving money for the City and its residents.
- Collecting rainwater can reduce water supply costs for landscaping.

TRANSPORTATION AND MOBILITY

- Creating mixed-use communities creates vibrant areas for residents and businesses, attracting both.
- Increasing bicycle and pedestrian options helps reduce traffic, enhance safety, and improve public health.

SOLID WASTE

- Reducing the amount of material going into the waste stream limits demands on waste-to-energy facilities and landfills.
- Reducing single-use plastics reduces their prevalence in city beaches and waterways.

TOTAL 55 ACTIONS TO ACHIEVE NET ZERO

REDUCTION BY 2030

REDUCTION BY 2040

2050

PROJECTED GHG EMISSIONS REDUCTIONS

REDUCTION BY 2030

REDUCTION BY 2040

REDUCTION BY 2050

FUTURE EMISSIONS PROJECTIONS WERE MODELED UNDER TWO SCENARIOS

Business as Usual → DO NOTHING

Assumes constant energy practices but accounts for increased demand due to factors including growth in the citywide population, workforce, vehicle usage, and projected airport activity.

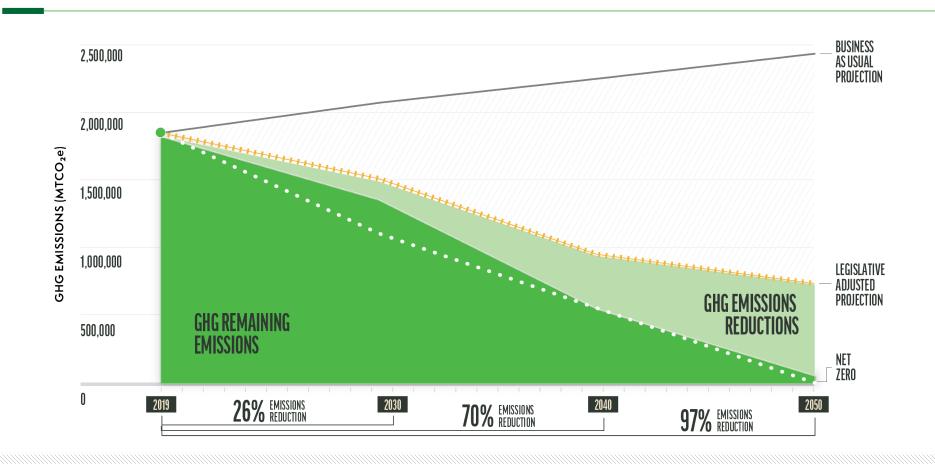

HOW
FORT LAUDERDALE
MODELS FUTURE
EMISSIONS

Legislative-Adjusted > LEVERAGE THE ACTIONS OF OTHERS

Assumes emission reductions relative to the business as usual scenario based on impacts from existing third-party commitments to decarbonize the grid and improve operational efficiency.

Includes projected impacts of Florida Power & Light's (FPL) Real Zero plan that commits to phasing out fossil fuels by 2045; the National Highway Fuel Efficiency Standards; and updates to the State of Florida Building Code regarding energy conservation.

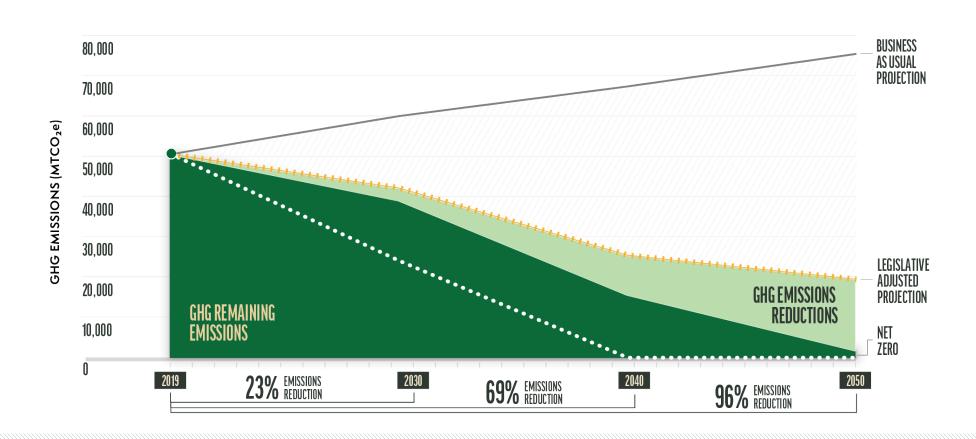

Municipal Pathway to Net Zero Achieves

96% GHG REDUCTION

PRIORITIZATION OF ACTIONS IMPLEMENTATION CONSIDERS SEVERAL

FACTORS

Advocate for increased energy efficiency, water conservation, and other performance standards in the Florida Building Code in partnership with Broward County and other stakeholders.

Priority Level: 1

Timeframe: Ongoing

GHG Impact: High

Timeframe

GHG impact

Life cycle cost to the City

Qualitative estimate for additional costs borne by the community

Social equity impacts for the community

Initial cost to the City

Return on investment (ROI) for the City

Alignment with existing strategic priorities

Co-Benefits

Level of effort (LOE) for the City

Funding: Federal and state grants, utility rebates

City Partners: City of Fort Lauderdale Public Works Department, City of Fort Lauderdale Development Services, Broward County, Transportation and Mobility Department (TAM)

Initial Cost: Low Life-Cycle Cost: Low ROI: Low

Additional Community Cost: Medium Social Impact: Medium

LOE: Low

Strategic Priority Alignment: Housing, infrastructure, and resilience **Co-Benefits:** Improved climate resilience

Performance Metrics: Kilowatt-hours (kWh) per square foot of building space, number of applications submitted to the Conservation Pays Toilet Rebate Program, number of faucet commended showerheads requested

Reaching net zero will require a continued collaborative effort that relies on community-wide and municipal strategies.

accooluers to understand conservation, and other performance of and advocate for increase

Fort Lauderdale's vulnerability to climate change is evident in the increasing frequency and severity of extreme weather events

- In April 2023, a 26-inch rainstorm in just 8 hours caused catastrophic flash flooding, inundating over 1,000 homes, rendering critical roadways impassable for up to 48 hours, and leaving some residential streets under 4-5 feet of water for nearly a week.
- Record-breaking high tides in recent years have resulted in chronic flooding in low-lying areas, with 180 tide events exceeding the City's flood threshold in 2023 and 119 such tides recorded in 2024.

While climate resilience has long been a City priority, this Plan is focused on proactive, targeted strategies and actions to effectively manage natural resources that will reduce GHG emissions.

To avoid the worst impacts of climate change, the City must be part of and demonstrate a commitment to regional, state, national, and global efforts to reduce GHG emissions.

This is Fort Lauderdale's

TIME TO LEAD
