

PROJECT OBJECTIVE:

iCare is looking to Capture market share with an advanced SaaS EHR system that offers unique IronCloud Network backup infrastructure that alleviates the need for on-premise human capital management and resources at the customer facility; while simultaneously eliminating the anxiety of traditional cloud software. Such as data location, access and security.

To develop an advanced EHR system that is unique in the space and offers technology architecture and a graphical user interface. Which will enable our customers to easily build and deploy applications delivered as a service to the customers' extended ecosystem.

iCare will make this software available for commercial use by building a SaaS application on a Platform as a Service (PaaS) framework that is scalable, easy to implement at a fraction of the cost of traditional software models without compromising features and functions.

PROJECT PARAMETERS:

The project parameters for this retention and expansion project includes the creation of 30 jobs with an average wage of \$63,509 (150% of the private sector average wage in Broward County), and the retention of 13 employees. If the expansion takes place in Fort Lauderdale, iCare's current location at 401 E. Las Olas has additional square footage available. The cumulative capital investment will be approximately \$4.3M and includes the purchase of additional servers, which are the key component that will absorb the increase in market share that is expected.
