**ROYAL UTILITY WATER TREATMENT
PLANT HAS LEVELS OF TOTAL
TRIHALOMETHANES
ABOVE DRINKING WATER STANDARDS**

Our water system recently violated a
drinking water standard. Although this
incident was not an emergency, as our
customers, you have a right to know
what happened and what we did (are do-
ing) to correct this situation.

We routinely monitor for the presence
of drinking water contaminants. Testing
results from October 2014 to September
2015 show that our system exceeds the
standard or maximum contaminant level
(MCL), for Total Trihalomethanes (TTHMs).
The standard or MCL for TTHMs is 80
parts per billion (ppb). It is determined
by averaging all the samples collected at
each sampling location for the past 12
months. The level of TTHMs averaged at
one of our system's locations from Oc-
tober 2014 to September 2015 was 83.9
ppb. Please note that the third quarter
results for this particular location was
74.3 ppb (below the MCL).

What should I do?

- There is nothing you need to do. You do
not need to boil your water or take other
corrective actions. If a situation arises
where the water is no longer safe to
drink, you will be notified within 24 hours.
- If you have a severely compromised
immune system, have an infant, are
pregnant, or are elderly, you may be at in-
creased risk and should seek advice from
your health care providers about drinking
this water.

What does this mean?

This is not an emergency. If it had been
an emergency, you would have been noti-
fied within 24 hours.
TTHMs are four volatile organic chemicals
which form when disinfectants react with
natural organic matter in the water.
*People who drink water containing tri-
halomethanes in excess of the MCL over
many years may experience problems
with their liver, kidneys, or central ner-
vous system, and may have an increased
risk of getting cancer.

What is being done?

Four months ago Royal Utility changed
disinfection method from chlorine to
chloramines which is a combination of
chlorine and ammonia in order to reduce
the level of trihalomethanes in the water.
The MCL exceedance reported in this
notice is obtained by averaging the quar-
terly sample results from October 2014 to
September 2015, which reflect the MCL
exceedances of previous quarters. TTHM
sample results of the second and third
quarters of 2015 were below the maxi-
mum contaminant level (58.9ppb and
74.3ppb respectively).

Royal Utility Water Treatment Plant will
continue to monitor and report the
TTHMs results to you on a quarterly basis
as long as any LRAA (local annual running
average) exceeds the MCL, as re-
quired. If you should have any questions
concerning this situation, please do not
hesitate to contact Royal Utility at (954)
344-9106. 8900 Northwest 44th Court,
Coral Springs, FL 33065

*Please share this information with all
the other people who drink this water,
especially those who may not have re-
ceived this notice directly (for example,
people in apartments, nursing homes,
schools, and businesses). You can do this
by posting this notice in a public place or
distributing copies by hand or mail.*
