Notes

Pursuant previous written correspondence this Authorization Request is associated with the time and financial impact associated with Hurricane Irma. Skanska was impacted due to the occurrence of Hurricane Irma, and is requesting additional time and costs due to the force majeure event.

Hurricane Irma Impacted the project schedule as the project was preparing to relocate the Marina facility into the temporary marina building. The move was unable to be completed as the City and Franchise Utilities were in hurricane preparation mode. After the storm passed, the project was without power for substantial amount of time, and unable to get AT&T and FPL onsite to disconnect service from the existing marina building, which delayed the demolition of the marina building, realignment of Las Olas Circle, and installation of underground utilities. The project team is still working to overcome the impacts of the storm

Cost included are Skanska's General Conditions, General Requirements and General Trades costs. Subcontractor costs resulting from the storm are included for Bright View, which included resetting trees that were blown over by the storm.

As agreed the additional costs associated with the AR will be funded from Construction Contingency until money is available in the Owner Contingency through sales tax sayings.

Architect's Project No:

Contract Date:

Contract Number: 2315602-CON-0000

Fort Lauderdale, FL 33312

The Contract is hereby revised by the following items:

Underground Utility Concealed Site Conditions

AR CE Description Amount
019 CE - 039 Time Impact Analysis - Differing Site Conditions / Underground Utility Conflicts \$ 0.00

Time Impact Analysis for additional time and compensation due to underground utility conflicts and differing site conditions. Please refer to the narrative included with this package.

As per discussion between Skanska and The City of Fort Lauderdale, Skanska requested general conditions compensation for 35 calendar days, and requested a schedule time extension of 52 calendar days on the construction schedule. This request is approved and the AR will include a budget transfer of \$160,405 from Owner Contingency into Skanska's General Conditions and a schedule extension of 52 calendar days. The new date for Substantial completion is August 23, 2019.

The City of Fort Lauderdale is requesting potential acceleration of the garage occupancy through the achievement of a Temporary Certificate of Occupancy (TCO). The City and Skanska will work to develop a plan to complete the garage hardscapes concurrently with commencing work at the North Intracoastal Lot. The City will seek to assist Skanska with gaining time in the construction schedule to achieve substantial completion once the parking garage facade is completed, to allow for parking of cars within the garage while the exterior hardscape and landscape is finalized.

The City is requesting that time savings on the schedule through achievement of the parking garage TCO will result in a 50/50 split between Skanska and the City for GC costs on the days saved. Skanska and the City will participate in scheduling sessions closer to time for the completion of the facade installation to develop a mutually agreeable schedule to achieve Substantial Completion and Garage

The City will receive a credit of \$2,292 per day (50% of Skanska's daily general conditions cost) for every day that is recovered through the acceleration of the Project.

Re: City of Fort Lauderdale – Las Olas Corridor Improvements Project Authorization Request (AR) 019

Dear Mr. Green,

On August 15, 2017, Skanska provided notice of differing site conditions discovered on site creating an impact to the Project beyond its reasonable control. Skanska is entitled to a Change Order equitably adjusting the Guaranteed Maximum Price and the Contract Time for completion of the Project pursuant to Section 25.1 of the General Conditions.

The differing condition involved existing electrical utilities that were originally to be demolished during site work by Skanska and its subcontractors. However, after review by Florida Power and Light (FPL) Skanska was informed that the existing utilities were active and in use to provide power to the local area and that the utilities would need to be relocated. The following sets forth the information required for an extension of time as provided in Section 25.2 of the General Conditions.

a. Nature of the delay or change in the Work

Skanska was delayed while FPL proposed rerouting of electrical utilities that were improperly marked on the Contract Documents for demolition.

330 SW 2nd Street
Suite 207
Fort Lauderdale, FL 33312
Phone 954,920.5167
Web www.skanska.com

b. Dates of commencement/cessation of the delay or change in the Work

The critical path of the Project was delayed 38 working day (52 calendar days). The critical path delay started on October 10, 2017 and ended on January 19, 2018 when FPL completed its work and Skanska was allowed to re-commence with the site preparation work required prior to the installation of auger cast piles.

c. Activities on the progress schedule current as of the time of the delay or change in the work affected by the delay or change in the Work

The auger cast pile installation could not commence prior to the relocation of the unforeseen active electrical utilities. This impacted all subsequent work on Phase One. The auger cast pile subcontractor, HJ Foundation, mobilized December 11, 2017 with the understanding that the FPL utility was to be removed and relocated prior to commencement. HJ Foundation provided notice to Skanska relating to the safety concern associated with the utility and the schedule impact for the installation breakup required by the specifications. HJ Foundation committed to developing a work sequence to avoid the utilities and minimize downtime. Due to the pending resolution of the relocation of the FPL utility, HJ Foundation couldn't feasibly wait any longer and demobilized from the project on December 20, 2017. They were unable to remobilize until January 19, 2018 as the relocation was not confirmed until earlier the same week. Since remobilizing HJ Foundation has completed the installation of the piles and the pile cap installation is ongoing.

d. Identification and demonstration that the delay or change in work impacts on the CRITICAL PATH (submittal of an updated CPM schedule)

Skanska submitted the updated construction schedule (DD 1.25.18) which identified the impact of the relocation of underground utilities on the critical path. Included with this AR is the Time Impact Analysis (TIA) which shows the effect of the underground utilities on the critical path.

e. Identification of the source of delay or change in the Work

The impact was caused by underground utilities that were improperly marked for demolition when in fact the utilities were still active and needed to bring electrical power to surrounding areas. Electrical Drawing Sheet (E-1.02) identifies existing electrical utilities to be demolished at the North Intracoastal Lot. Skanska held site coordination meeting with Florida Power and Light (FPL) on July 28, 2017 to review the site conditions and to coordinate the demolition of the utilities per the contract documents. At the conclusion of the meeting FPL advised Skanska they

Skanska USA Building Inc. Fort Lauderdale Office

www.skanska.com

330 SW 2nd Street Suite 207 Fort Lauderdale, FL 33312

would check the record documents to confirm what the utilities were feeding. More than a week after the meeting (August 8, 2017) FPL notified Skanska that the lines identified for demolition would need to be relocated, due to being a primary utility line providing electrical service to the Las Olas Marina docks. Due to the nature of the scope to be performed, relocation of primary utility, the work would need to be performed by FPL or an approved FPL contractor. FPL was to begin reviewing the potential for relocation of the utilities and provide proposed route outside of the building pad. Below is a timeline associated with the resolution and impacts associated with the utility relocation and demolition.

Skanska provided formal notification of concealed and unforeseen site conditions to the City of Fort Lauderdale on August 15, 2017, for the existing FPL utilities. Due to the fact that the utilities were high voltage lines, the scope associated with the relocation of the lines was required to be performed by FPL or an approved contractor. This work was not included in the Skanska GMP and is additional scope. In the notification to the city Skanska requested for the Design Team to investigate the condition and provide recommendation for resolution to this item.

f. Anticipated impact extent of the delay or change in the Work

At this point the actual impact is known and the Project was impacted thirty-eight (38) working days or fifty-two (52) calendar days.

g. Recommended action to minimize the delay

After submitting the formal notification to the City of Fort Lauderdale, Skanska and the City's Project staff continued coordination with FPL to attempt to find resolution to the utility. These efforts were hampered by Hurricane Irma, but once FPL was able to restore power in the local area and allocate resources back to this Project Skanska assisted in the coordination of relocation.

The City issued a Purchase Order (PO) and provided a dedicated easement to FPL for the performance of the relocation and demolition of the work; the PO was issued on October 26, 2017. Upon receipt of the PO FPL was able to schedule the start of the work which was targeted to commence on December 11, 2017 which would have allowed for the completion of the relocation prior to the commencement of the auger cast pile installation.

From the time the electrical conflict was identified, receipt of RFI responses, through coordination, and performance of work the project schedule was directly impacted thirty-eight

(38) working days or fifty-two (52) calendar days. Skanska has conducted an analysis of the project schedule and incorporated activity resequencing to minimize the overall construction impact. This AR includes the request for additional time directly related to the underground utilities and additional compensation for the time extension. Please review the attached documents and provide any questions, concerns, or comments related to the information included.

Regards

Vincent Collins, III Senior Project Manager
