SECTION 1 – INTRODUCTION

1.1. General Overview

The purpose of the Design Criteria Package (DCP) is to furnish sufficient information to permit a Design Build Firm (DBF) to prepare a bid or a response to the City of Fort Lauderdale's D/B Request for Proposal (RFP), or to permit the City to enter into a negotiated Design Build contract. The DCP, at a minimum, specifies performance-based criteria for the public construction project, including survey information concerning the site, material quality standards, conceptual layouts and design criteria for the project, site development requirements, provisions for utilities, storm water retention and disposal applicable to the Federal Courthouse Garage (Project). It is the City's intent to contract with a DBF for the design, permitting, construction administration and construction of a new parking facility and related infrastructure for the Project.

1.2. Project Description

The Federal Courthouse is currently located at 299 E Broward Boulevard and will be relocating to a site due south at the NE Corner SE 3rd Avenue and SE 11th Street. The City will design and build the project to serve the courthouse on Federally-owned land. The parking garage will serve as the primary public parking facility servicing the courthouse during business hours. This will be a paid parking facility, using the City's established payment methods and will include provisions for future EV charging stations.

The Parking Garage design is to be a conventional parking garage structure wrapped with an aesthetically pleasing architectural element. The parking structure is to include landscape and irrigation, storm drainage, signage and site lighting. There will be pedestrian connection access ways to the courthouse on the north and south ends of the garage. The Project construction is to be completed to open prior to or at the opening time of the courthouse.

All associated remediation will be the responsibility of the DBF. Remediation includes remediation of contaminants on the site, as well as, associated with demolition/removal of existing structures and utilities if necessary.

Goals for the project shall include the following elements:

- The project shall be designed and constructed to have an expected service life of not less than sixty (60) years.
- A parking capacity of not less than 284 spaces is required.
- Architectural screening is to be utilized on the north, south & west facade of the garage to obstruct visibility and prevent light spillover.
- The project will provide motorcycle and bicycle parking.
- Project will be planned by setting the grade level finished floor at a minimum of Base Flood Elevation +6.00' NAVD with a finished floor elevation at BFE +1.00' if rooms/ enclosed spaces are proposed on the ground floor. If the ground floor is

strictly parking then there is no minimum FFE requirement over BFE . The BFE for this project has been established at 6.00' NAVD.

- All critical equipment required for the continuous operation of the project shall be located above BFE +6.00' NAVD.
- An AT&T easement width of 10'-0" at the East property line and along the north end of the garage shall be respected as well as a pump lift station located in the southeast corner of the property. The Design Builder will be responsible for adequately screen the Lift Station with architectural screening.
- The project design shall provide the most functional and efficient parking layouts and geometry to achieve minimum car counts.
- A minimum of two (2) passenger elevators shall be included, (1) at the northwest corner to connect pedestrian traffic to the courthouse and (1) at the southwest corner of the garage to connect pedestrian traffic to the public realm as well as the courthouse. The egress plan shall be ADA compliant and elevators sized to meet the peak demand anticipated for the Project.
- Minimum floor-to-floor heights shall be 12'-0" ground to second and 11'-0" above.
- Ramp slopes shall be held to a minimum throughout the project with industry standard transitions at both ends. Ramps without parking shall not have slopes greater than 12% and ramps with parking shall not have slopes no greater than 5.0%.
- Design of the facility shall be fully compliant with ADA accessibility requirements.
- Project shall comply with the City of Fort Lauderdale's Crime Prevention Through Environmental Design (CPTED) Ordinances and/or initiatives. CPTED is based on the principle that proper design and effective use of buildings and public spaces in neighborhoods can lead to a reduction in the fear and incidence of crime, and an improvement in the quality of life for the citizens and visitors to the City of Fort Lauderdale.
- Landscaping of the site will be a continuation of the Federal Courthouse making use of the same planting species and design and provide a pedestrian pathway connection from SE 11th Street and the Tarpon River waterway as requested by the City of Fort Lauderdale.
- Add improvements along the Tarpon River waterway consistent with the Federal Courthouse landscape design with GSA & Design builder coordination.

SECTION 2 – SITE OVERVIEW

2.1. Site Design Intent

The Federal Courthouse is currently located at 299 E Broward Boulevard and will be relocating to a site due south at the NE Corner SE 3rd Avenue and SE 11th Street in the City of Fort Lauderdale. The City will design and build the project to serve the courthouse on Federally-owned land. The approximately 1.67-acre property can be further identified by Broward County parcel ID number 5042 10 76 0020 and the United States Federal Government is listed as the current property owner. The parking garage will serve as the primary public parking facility servicing the U.S. Courthouse Building which is currently under construction. This will be a paid parking facility, using the City's established payment methods.

This project is located at Northeast section of SE 3rd Avenue and SE 11th Street, in the City of Fort Lauderdale. The work to be accomplished under this contract includes, but is not limited to, preparation of a design criteria package for the design of a 284-parking space multi-level garage to the east of the property. The parking structure will utilize an architectural screening element to obscure line of sight from the garage to the Federal courthouse as well as provide a pedestrian connection on the north side of the site to proposed pedestrian walking path adjacent to the Tarpon River connecting at the northwest and southwest corners of the garage to the Federal courthouse main entrance. The design will provide an elevator, to the north and south for pedestrian access to SE 11th Street and to the courthouse walking path along the Tarpon River. The allocated construction build site (Lot Lease Line) from GSA is approximately 112.00' x 255.80' or roughly 0.62 acres.

2.2. Existing Conditions

The existing site is a cleared, undeveloped lot adjacent to the Federal courthouse project to the west, bound by the Tarpon River to the north, SE 11th Street to the south and Lorenzo Nissan to the east. At the east property line is an AT&T easement of 10'-0" that also runs along the north edge of the garage. There is a pump lift station easement approximately 30.00' x 51.17' located at the southeast property line both to be respected. Vehicular access to this lot is from SE 11th Street west of the lift station.

The topographic survey titled ALTA/NSPS Land Title Survey U.S. Federal Courthouse Parking Garage – Fort Lauderdale portion of Parcel A "Reamended Plat of Block 3 - Lauderdale, dated 03 November 2024 (see appendix A) prepared by McLaughlin Engineering Company, reflects elevations within the project site in the range of 2.34' NAVD to 3.76' NAVD.

- **Utilities**

There are numerous existing utilities that run within the project site, per atlases and as-builts received from the City of Fort Lauderdale. These include but are not limited to:

- 6" DIP water main traversing the southern property line along SE 11th St, transitioning to PVC near the center of the property line.
- 6" DIP and PVC water main traversing the western property line along SE 4th Ave.
- 6" PVC water main along SE 10th Ct.
- 10" VCP gravity sewer main traversing the western property line.
- 10" VCP gravity sewer main along SE 10th Ct.
- An abandoned 10" CIP gravity sewer main running from the northern end of SE 4th Ave and ending at the manhole at the intersection between SE 4th Ave and SE 10th Ct.
- 10" VCP gravity sewer main running from the manhole at the intersection of SE 4th Ave and SE 10th Ct to the pump station near the southwest corner of the subject property.
- 14" CIP gravity sewer main running from the manhole at the intersection of SE 11th St and SE 4th Ave to the pump station at the southwest corner of the subject property.
- 10" VCP gravity sewer main traversing the southern property line east-west along SE 11th St.
- A Public Lift Station (owned by City of Fort Lauderdale) located at the SE corner of the site. This is permitted under the wastewater construction license WW-63129 through Broward County.

- **Environmental**

There is a sanitary sewer lift station located at the southeast corner of the subject site. The DCP professional also observed a mobile generator on the southeast corner, which is diesel fueled and will be used to temporarily power the office trailer until the subject site is connected to FPL. The generator was not active at the time of the professional's site reconnaissance, and no evidence of leaks or releases were observed. Additionally, a pole-mounted transformer is located on the southern boundary. It was not labeled as "non-PCB containing" and appeared to be in good condition with no evidence of leaks or discharges.

The DCP professional observed two roll-off waste containers on the eastern portion of the subject site. The containers are reportedly used to disposed of waste from the west adjoining construction activities. The containers were observed to be in good condition without obvious indications of a release or material threat of a future release. Solid waste is picked up by Coastal Waste & Recycling on an as-needed basis.

Additionally, the DCP professional observed soil stockpiles on the northern portion of the subject site consisting of topsoil and excess graded soil from portions of site and will be used for onsite development. The soil did not originate from sources other than the subject site.

One site of potential environmental concern was identified as Star Motors/Lorenzo Nissan Fort Lauderdale/Marlin Imports, Inc. located at 1051 S. Federal Highway and approximately 229 feet east of the subject site. According to the information obtained from the regulatory files reviewed, this facility has operated as an automotive sales and maintenance facility for over 60 years. The facility consists of a showroom and maintenance area that contains a north lift line with 10 hydraulic lift areas and a south lift line with 14 hydraulic lift areas.

Previous assessments were completed for a property transaction and identified concentrations of polynuclear aromatic hydrocarbon (PAH) exceeding the Chapter 62-777 Florida Administrative Code (F.A.C.) Soil Cleanup Target Level (SCTLs) in the soil. The soil impacts were identified in the swale area on the western portion of the property and attributed to street surface runoff from Southeast 11th Street. Excavation activities were completed in October 2014 by CRB Geological & Environmental Services, Inc. (CRB). Approximately 147.52 tons of impacted soil was excavated and transported offsite for disposal. Following excavation activities, CRB collected confirmation soil samples for laboratory analysis of PAHs by EPA Method 8270 and installed one temporary monitoring well in the center of the former excavation before collecting a confirmation groundwater sample for laboratory analysis of PAHs by EPA Method 8270. The analytical results for the confirmation samples collected confirmed no detection of PAHs above their respective cleanup target levels. Based on the results, CRB recommended approving a No Further Action (NFA), and the Broward County Pollution Prevention Division (Division) subsequently issued a correspondence noting that they concurred that the requirements of NFA had been met.

Additionally, a Discharge Report Form (DRF) was filed on 11 February 2019, for evidence of a discharge from the hydraulic fluid associated with the in-ground automotive lifts based on groundwater data collected during a Phase II Environmental Site Assessment (ESA) identifying concentrations of total petroleum hydrocarbons (TPH) exceeding the GCTL. Subsequent soil and groundwater assessments were performed, which identified groundwater flow to be towards the northeast and confirmed the delineation soil and/or groundwater contaminants of concern were not exceeding their respective cleanup target levels. Based on the soil and groundwater analytical results NFA was recommended, and the Division issued a Site Rehabilitation Completion Order (SRCO) on 12 June 2020.

This facility currently maintains a Hazardous Material License (#03656) for generating waste including petroleum products, coolant, batteries, absorbents, solvents, and fluorescent lightbulbs. The license is valid until 28 February 2025, and no violations have been reported. Based on the current regulatory closure status for the reported discharge, the cross-gradient location of the facility, and lack of violations, this site is not considered to represent an environmental concern for the subject site.

**SECTION 3 - CIVIL ENGINEERING NARRATIVE****3.1. Base Flood Elevation Requirements**

The FEMA Flood Insurance Rate Map (FIRM) numbers 12011C0557H & 12011C0557H indicates that the Project is located in zones AH and AE with a base flood elevation (BFE) of 6.00-ft NAVD (7.58-ft NGVD). Based on the FEMA FIRM map, the minimum finished floor elevation of the Project shall be 6.00 -ft NAVD plus one (1) foot, totaling 7.00-ft NAVD. Based on conversation with Broward County, the minimum FFE for the parking garage will need to be met if any rooms/enclosed spaces are proposed on the ground level/first floor. If the ground level is strictly a parking area, there is no minimum FFE needed to be met.

3.2. Drainage and Surface Water Management

The on-site stormwater management system shall be designed for the 25-year 24-hour storm event (per South Florida Water Management District, SFWMD) for a total of 8.50-inches of rainfall to be retained on-site. The system will be required to meet SFWMD water quality requirements.

The on-site stormwater management system currently permitted for the courthouse building adjacent to the proposed parking garage has a system of catch basins interconnected with drainage pipes and exfiltration trench that ultimately discharge into drainage wells. The current system is assuming 390 GPM for the discharge rates for the wells which matches what other wells are producing in the immediate nearby area, this discharge rate will be confirmed once the wells are constructed and tested. Using the 390 GPM discharge rate for each drainage well, we are expecting a total of 3 drainage wells will be suffice for the parking garage drainage system. We will be connecting in the existing drainage system for the courthouse and will need to apply for a modification to the current SWM License through Broward County.

3.3. Sanitary Sewer Service

The following are the nearest existing sanitary sewer lines and equipment to the Project site:

- 10" VCP gravity sewer main traversing the western property line.
- 10" VCP gravity sewer main along SE 10th Ct.
- An abandoned 10" CIP gravity sewer main running from the northern end of SE 4th Ave and ending at the manhole at the intersection between SE 4th Ave and SE 10th Ct.
- 10" VCP gravity sewer main running from the manhole at the intersection of SE 4th Ave and SE 10th Ct to the pump station near the southwest corner of the subject property.
- 14" CIP gravity sewer main running from the manhole at the intersection of SE 11th St and SE 4th Ave to the pump station at the southwest corner of the subject property.
- 10" VCP gravity sewer main traversing the southern property line east-west along SE 11th St.
- A Public Lift Station (owned by City of Fort Lauderdale) located at the SE corner of the site. This is permitted under the wastewater construction license WW-63129 through Broward County.

No improvements or sewer extensions are proposed for this project scope as none are required for the parking garage.

3.4. Water Service

The following are the existing water mains abutting the Project site:

- 6" DIP water main traversing the southern property line along SE 11th St, transitioning to PVC near the center of the property line.
- 6" DIP and PVC water main traversing the western property line along SE 4th Ave.
- 6" PVC water main along SE 10th Ct.

No improvements or water extensions are proposed for this project scope as none are required for the parking garage.

Fire hydrants shall be located no more than 300-ft from each other. There are existing fire hydrants at the following locations near the Project site:

- North of the intersection of SE 11th Street and SE 4th Avenue, north of the sidewalk.
- Along SE 3rd Avenue, north of the proposed steps into the courthouse.

- Along SE 11th Street, between SE 4th Ave and S Federal Highway, along the southern sidewalk.

Based on a preliminary review of the site, it is anticipated that new fire hydrants will not be required on-site for the proposed development at this time and will be confirmed during the pre-application meeting.

Please note, existing water main information referenced above is based on utility atlas and as-built drawings received from the City of Fort Lauderdale.

3.5. Paving & Grading Improvements

- Driveway Connections: The primary project driveway shall be located along SE 11th Street. The existing curb will be used for the new driveway location.
- Right-of-Way Improvements: No Right-of-Way improvements are proposed for this project. All construction to be done within the property.

3.6. Utility Relocations

Two existing light poles will need to be removed from the site as they are in conflict with the location of the proposed garage.

- Stormwater Utility Relocations: No stormwater relocations necessary for this project.

Please note, existing water main information referenced above is based on utility atlas and as-built drawings received from the City of Fort Lauderdale, information found in boundary and topographic survey and aerial maps. It is the responsibility of the DBF to verify existing water mains serving the site.

- Sanitary Sewer Utility Relocations: No sanitary sewer relocations necessary for this project.

Please note, existing water main information referenced above is based on utility atlas and as-built drawings received from the City of Fort Lauderdale, information found in boundary and topographic survey and aerial maps. It is the responsibility of the DBF to verify existing water mains serving the site.

- Water Main Relocations: No water main relocations necessary for this project.

Please note, existing water main information referenced above is based on utility atlas and as-built drawings received from the City of Fort Lauderdale, information found in boundary and topographic survey and aerial maps. It is the responsibility of the DBF to verify existing water mains serving the site.

SECTION 4 – ARCHITECTURAL NARRATIVE

1.1. General Requirements

- Screening elements should allow for natural ventilation and prevent light spillover, specially from the north and south.
- Screening should provide architectural interest.
- Screening finishes shall be durable and use high-quality materials that can withstand South Florida's extreme coastal saltwater environment.
- Screening element may have an offset from the building to allow for undulating planes.
- Metal, preferably stainless steel, steel, or aluminum, should be utilized and not fabric.
- Metal screen/skin can be prefabricated and attached to the outside of the structure.
- See diagram below for screening/skin element design intent.
- The façade facing SE 11th Street to articulated with interesting architectural elements or features such as an angled cap sky connection at the stairwell or a creative pedestrian entrance awning.
- The City of Fort Lauderdale requests a pedestrian form SE 11th Street and the Tarpon River waterway.

1.2. Upper Façade Screening of the Parking Structure

The primary exterior design intent of the garage's upper levels is to provide a creative architectural screening element that blocks the exterior views of parked vehicles and light spillover, that veils the building's exterior structural precast components, as well as one that provides an aesthetically pleasing experience and safety when leaving and coming to vehicles. Like the ground floor areas, the upper floors architectural design intent should stress energy efficiency and low future operating and maintenance expenses. Integration of features to enhance daylighting of parking areas should also be stressed. The following provides general design intent for upper floor level areas. The screening should incorporate an exterior façade that will complement in color and design the Federal Courthouse Building. Federal Courthouse design render shown in Architecture section 1.4.

1.3. Basis of Design

- Durable Architectural Mesh/ panels that limit light spillover
- Spandrel glass to be utilized instead of clear glass as requested by the City of Fort Lauderdale.

Exhibit 1C

Page 363 of 498

Design 1:

This option proposes a vertical expression of triangular planes wrapping the garage's exterior facades. Each sectional wedge consists of vertical and angled projecting members with the mesh fabric being stretched outward and inward.

Design 2:

This option proposes vertical precast members framing rectangular meshed sections wrapping the garage's exterior facades. Each individual alternating section angles the stretched mesh inward towards the bottom or the top.

Design 3:

This option proposes soft horizontal undulating planes wrapping the garage's exterior facades, framed by projecting precast members along the top and bottom of the building. Each section bulges either outward or inward to create metal waves rippling across the elevation.

SECTION 5 – STRUCTURAL NARRATIVE

5.1. General Requirements

The structure shall be designed and constructed to be durable and minimize maintenance problems. Unless specifically noted otherwise, the parking structure shall conform to ACI 362.1R (“Guide for the Design of Durable Parking Structure”) recommendations. Where a conflict exists between ACI 362.1R and other items in this Design Criteria Package, the most stringent shall apply.

5.2. Structural Design: At a minimum, the structural design shall include the following:

- The concrete mix for columns, supported slabs and beams shall be proportioned to meet ACI requirements including limitations on water soluble chloride in the concrete and maximum water-to-cementitious ratios. A water-to-cementitious ratio of 0.38 or less shall be used except for foundations which may have up to a 0.45 water/cement ratio.
- Shrinkage cracks shall be minimized by recommended practices for placing, finishing, and curing concrete.
- Provide the following durability enhancements to the concrete floors and their support beams:
 - Maintain epoxy coating of reinforcement and provide the addition of calcium nitrite concrete admixture at a dosage rate of 3 gals/cu. yd. for all above grade horizontal concrete structure.
 - Reinforcing steel and tie wires, support bars and chairs used in top 3" of slabs shall be epoxy coated. Provide a minimum cover of 1-1/2" (stirrups and slab top steel) and 2-1/2" (column main steel) except only 1" of cover shall be required on the undersides of slabs. Minimum cover of 3" shall be provided for concrete in contact with the earth.
 - Structural connections to the superstructure shall be made with hot-dip galvanized steel components (zinc corrosion protection).
 - Heavy duty traffic bearing membrane shall be used on parking deck surfaces over all occupied space. All other horizontally poured concrete (and 2 feet up on adjacent horizontal surfaces) shall have silane concrete sealers applied to slow moisture and chloride penetration. Decks shall be designed with positive drainage slopes to minimize long-term maintenance requirements.

5.3. Design Methodology

- Substructure
 - In response to the subsurface conditions of the project site and per the recommendations of the Geotechnical Engineer, the building superstructure shall be supported on a deep foundation system or a ground improvement program to allow for

shallow foundations are deemed the most suitable approaches to support the parking structure.

- Based on the current conceptual plans, the ground level floor will likely be a slab-on-grades. The slab-on-grade can be supported by the current subsurface conditions if proper site preparation is performed or if engineered fill is used. The ground floor slab, supported on grade, can be designed using a modulus of subgrade reaction of between 150 lbs/in³ after proper site preparation is completed. Site preparation, including removal of any topsoil, as well as any remnant subsurface elements, followed by proof-rolling and engineered fill placement, should be performed.
- Superstructure
 - There are two prevalent structural systems in use today, post-tensioned concrete (CIP/PT) and precast concrete (PCC); both systems provide long span, column-free bays. There are several factors involved in system selection that will need to be evaluated in order to select the best structural system for this project:
 - 1) Perception of Space: Both PCC and CIP/PT systems adapt very well to parking uses however CIP/PT parking structures usually provide better visibility of signage, ceiling height perception, and distribution of illumination from internal lighting; The reason for this is that PCC structures have many more components that segregate space than CIP/PT structures do. For example, PCC generally uses the 12-foot wide double-tee for the parking decks; each double-tee has two stems (integral beams). Due to the close spacing of tee stems (6-feet apart) in PCC versus the 18 to 27-foot spacing of beams for CIP/PT, there are often 3 to 4 times as many supports in a PCC system. In addition, PCC double tees require continuous end support whereas CIP/PT beams are located at columns only; the continuous end support reduces the amount of openness from that of a typical CIP/PT system.
 - 2) System Limitations: Parking structure design requires most all deck areas to slope. Parking decks often need to have variable slopes to accommodate both vehicular ramp access and sloping to drain. When a deck has variable slopes in more than one direction, this is commonly referred to as 'warping'. PCC components have limits to how much twist they can withstand and irregular conditions may present design limitations. CIP can be used effectively when excessive warping and/or irregular conditions of the parking decks are not conducive to PCC. We do not foresee the need for excessive deck warping at this point (PCC & CIP/PT both remain viable).
 - 3) Concrete Structure Design: The basic component of either a CIP/PT or PCC system is concrete. The top 2 inches of concrete on a PCC deck is typically a non-structural wearing surface which can be placed at the manufacturing plant or in the field. The design of a long-lasting (durable) structure shall consider the following:
 - a. Concrete Qualities:
 1. Use low water/cement ratio .40 or less.
 2. If possible, use chert-free aggregate.
 - b. Concrete Additives:

3. Use calcium nitrite to densify the concrete and as a corrosion inhibitor at a dosage rate of 3 gals/cu. yd. of concrete.
4. Use of a plant or site-added superplasticizer for workability.
- c. Concrete Protection:
 1. Use a concrete sealer over all parking decks such as a 40 percent saline at a rate of 125 sf/gal. Testing should be done on repellency and penetration.
 2. Use a heavy duty traffic bearing membrane over all occupied space.
- d. Reinforcing/Connections:
 1. Reinforcing in the top 3" of concrete slabs should be epoxy-coated.
 2. In the case of a post-tensioning system use totally encapsulated tendons/anchors.
 3. In case of a precast system, use hot-dipped galvanized connections (stainless steel for flange-to-flange connections).
- e. Mandatory Joints:
 1. To control cracking of concrete, all PCC systems require visible joints with sealant at each component-to-component connection.
 2. Sealant is required at all joints where water and/or weather-tightness are required. In a field-topped PCC system, always use a tooled control joint with sealant at all precast-to-precast joints (do not saw-cut).
- Design Criteria Specific to CIP/PT
 - 1) The primary reinforcing for the slabs and beams shall be high-strength steel cables (strands) which shall be protected from corrosion by a plastic sheathing and a corrosion inhibitor (totally encapsulated). The concrete shall be designed using a low water to cement ratio, air entrainment, fly ash and/or ground granulated blast furnace slag (GGBFS) to provide a durable concrete surface (high density, low permeability). In order to provide additional resistance to water and corrosive elements (chlorides, etc.), epoxy coated reinforcing and tie-wires shall be used in the top 3" of all elevated concrete slabs with a minimum 1 1/2" cover from the top of all reinforcing to the top of concrete. The roof slab, also utilized for parking, shall be constructed the same as described for floor slabs.
 - 2) The span of the floor framing shall be one-way in nature. Insofar as practicable, all cladding loads for the superstructure shall be distributed to columns and or beams only if not taken directly to the foundation system – no slab edges shall be used support cladding without immediate beam proximity.

- Tower Elements:
 - 1) In order to compensate for anticipated building expansion/contraction, the elevator tower(s) shall be separated from the main superstructure by means of an expansion joint. A waterproof traffic bearing expansion joint seal shall be used. For the main structure, gravity loads and lateral loads shall be resisted by frame action (columns, beams and slabs) with shear wall augmentation in the longitudinal direction, between the ramps. For the elevator tower structure, gravity loads and lateral loads may be resisted by solid wall components.

5.4. Design Criteria

- The following minimum design live load criteria shall be used for the frame of the parking structure:
 - Latest Edition of all Codes, Standards, and Regulations Applicable to the Parking Structure.
 - 1) 2023 Florida Building Code.
 - 2) Reference Building Code – ACI 318.
 - 3) Reference Code – ASCE-7.
 - 4) Any other codes as applicable.
 - General Live Loads.
 - 1) Parking Areas 40 psf.
 - 2) Stair and Elevator Lobby 100 psf.
 - 3) Storage Areas 125 psf.
 - General Dead Loads.
 - 1) Post-tensioned Concrete Slab on Beams (Actual weight based on 145 pcf).
 - Loads Excluded (Including but not limited to):
 - 1) No construction loading (Cranes, etc.).

- **Lighting Controls**

Due to new code requirements in the 8th Edition of the FBC, which were adopted on December 31, 2023, we have to provide more controls for parking garages. To meet those requirements, below is a list of what we will be providing on the Federal Garage project:

- C405.2.8. All lighting must be turned off by a time switch or occupancy sensor. If we wired all the lighting only through occupancy sensors, the garage would go completely dark after being unoccupied for 20 minutes. So, to avoid this, we will be wiring all lighting through a relay panel with time controls. This relay panel will have 0-10v dimming capabilities.
- C405.2.8. All lighting must automatically reduce by at least 30% when an area is unoccupied for 20 minutes. The lighting is to be controlled in zones not to exceed 3,600 sq. ft., so we will be zoning the interior lighting in the garage into these control zones and adding occupancy sensors connected to the relay panel for each zone. This will give us options on when the lighting is turned off and when it is only reduced due to occupancy based on time.
- C405.2.8.2. Lighting at drive in entry points will be zoned separate from the general lighting. These lights must reduce levels by 50% during nighttime hours for eye adaptation.
- C405.2.8.3. Lighting within 20' of perimeter walls must reduce by 50% in response to daylight. So, we will be zoning the perimeter fixtures separate and providing daylight sensors to meet this code requirement.

Functional and Beautiful

We reimagined two-thousand-year-old chain mail armour into a unique architectural mesh made using our own patented, award-winning technology.

RE/8 bio-circular architectural mesh reduces solar heat gain by up to 70% while still providing compliant airflow and visual transparency. We can make our screens to any height or width without joins, giving you exceptional design freedom for your next exterior project.

Making Waves

PROJECT

Lawson Lane Campus

DESIGN ARCHITECTS

Arc Tec

LOCATION

Santa Clara, CA, USA

This stunning facade for the Lawson Lane Campus in Silicon Valley features Kaynemaile's range of three-dimensional, kinetic screens across the parking garage.

We worked with design architects Arc Tec and installers B.T. Mancini to complete this stunning facade for the Sobrato Organisation as part of a major office development in Santa Clara CA.

Each Kaynemaile screen on this project has a self-supporting, lightweight internal frame connected to vertical stainless steel cables. A ribbon of our bronze coloured polycarbonate mesh runs over each frame, creating a kite-like structure.

The different locations of each projecting section give contrasting light and shadow effects, enhancing the wave across the face. The nature of the stainless steel internal support system combined with Kaynemaile's mesh allows it to move with the wind along the San Tomas Expressway, creating a kinetic, expressive building for passers-by.

Kaynemaile's RE/8 bio-circular architectural mesh is manufactured to withstand the demands of high temperature and UV exposure zones, plus it's durable and easy to maintain.

With up to 70% solar reduction and compliant airflow all within a self-supporting package, this Kaynemaile system is a beautiful addition to the architecture of Silicon Valley.

very well received in the city”.*

—STEPHEN A. MUNGER, SCHOOLEY CALDWELL

The successful collaboration between Ned Kahn, Kaynemaile and the team at Schooley Caldwell was the key to the development of this stunning kinetic facade for the Greater Columbus Convention Centre.

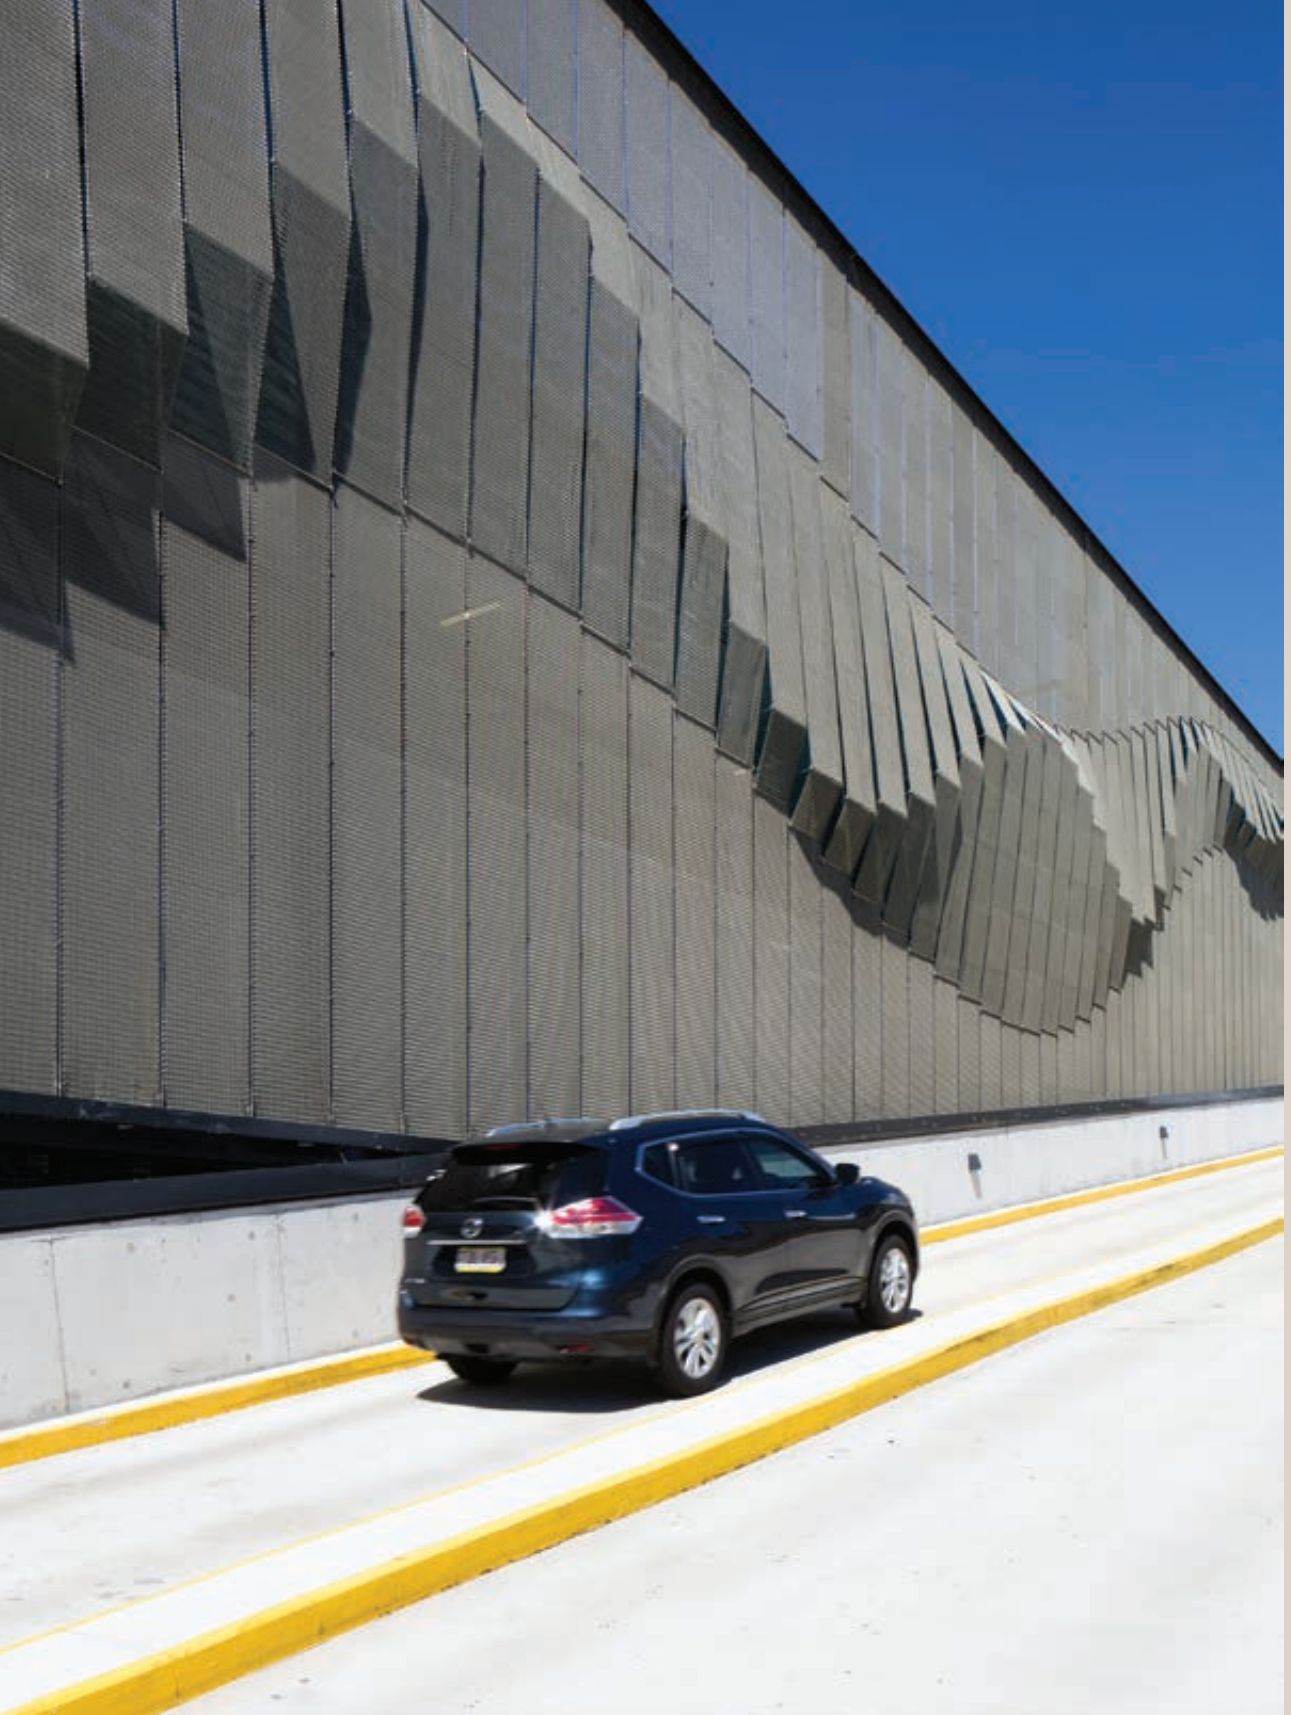

The design and fluid movement is made possible through Kaynemaile's unique manufacturing process as well as the material's light weight. Each of the three screens are single pieces of mesh 60 metres long x 4 metres high.

With our mesh already in use as a ceiling feature on site at the Union Ballroom, the architects and the convention centre board were highly supportive of the material selection.

PROJECT

Pacific Fair Shopping Centre Parking Garage

DESIGN

Scentre Group

LOCATION

Gold Coast, Australia

“Using Kaynemaile really invigorated this project for us. It turned a parking garage into a compelling architectural statement”.

—STEPHEN SIMPSON, SCENTRE GROUP

When Scentre Group's design team approached Kaynemaile with the concept for Pacific Fair it seemed like a perfect match. Initially designed with a rigid metal panel in mind it soon became apparent that the traditional material lacked the fluidity the designers needed. Additionally, the need for a substantial sub-frame for a metal panel system had increased the project costs significantly.

Kaynemaile's architectural mesh can be made to any size in a seamless piece, this meant it worked with the pre-engineered structural frame heights and gave the project designers more flexibility.

With Scentre Group encouraged by the material's possibilities, our fabrication team quickly turned out new screen concepts at scale for review—a fast track prototyping process that gave the client confidence to progress further with the design.

Kaynemaile's collaborative approach extended into the detailing phase as a unique self-supporting fixing system was developed, providing the ability to be adjusted on site during install and allowing for future maintenance.

Along with the three-dimensional screens, a flat Obsidian Black coloured Kaynemaile screen was also produced for the parking garage exterior—a seamless single-piece screen measuring 50 metres wide by 9 metres high, which was lifted and fixed off in a day by hand without the need for costly site cranes.

During the day the sun sparkles off the ten million or so individual Kaynemaile rings. At night the second layer of mesh becomes a rippling wave moving with the breeze from the nearby Pacific Ocean, transforming a utilitarian parking garage into a stunning landmark.

"We were really impressed by the speed with which Kaynemaile expedited the project. The timeframe for this facade was six months and Kaynemaile succeeded in delivering within four."

The WonderCool Effect

PROJECT

The Arrivals Canopy at Expo 2020 Dubai

DESIGN

Woods Bagot Dubai

LOCATION

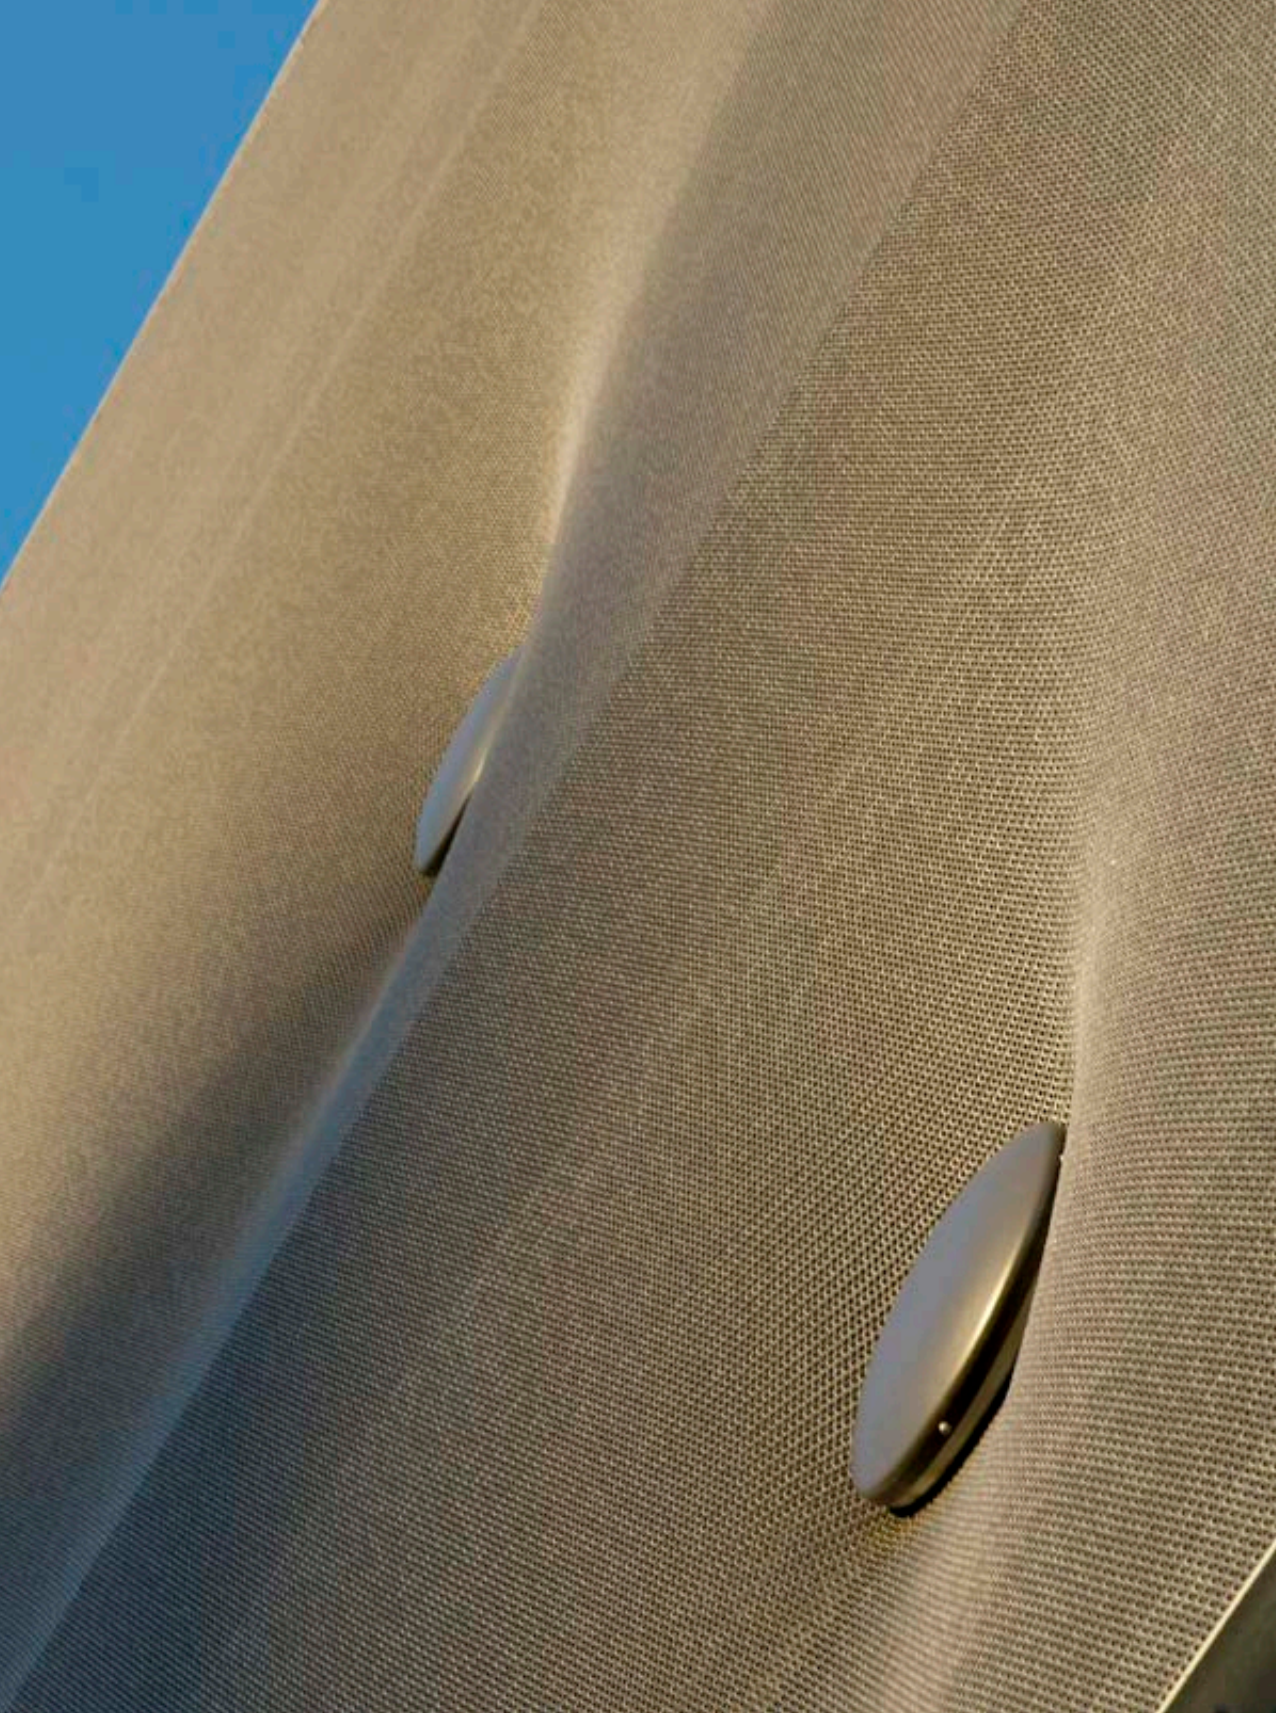

Dubai, UAE

This soaring kinetic canopy acts as both outdoor air-conditioning and massive urban artwork. The fluid movement of the single-piece Kaynemaile screens generate a calming sensory experience and trigger air movement. By night, the canopy comes to life as a backdrop to dynamic light shows.

We call this unique combination of attributes the ‘WonderCool’ effect, bringing life and movement to urban spaces.

Seamless at Scale

PROJECT

Angas Street Parking Garage

DESIGN

Tectvs

LOCATION

Adelaide, Australia

This multi-storey parking garage was clad using only eight individual screens—the biggest being a seamless piece 58 metres wide x 16 metres high.

Inspired by an old leather couch the unique concept called for button-like steel discs to be tensioned back into the mesh. To achieve this design we prototyped the concept at scale, making sure it could be successfully realised and installed within the fast installation schedule.

The steel buttons create significant depth in the Kaynemaile screens, giving dynamic colour and shadow changes as the light moves from day to night across the facade.

With install speed in mind we designed our fixing system to allow these large screens to be lifted and fixed off in a day, significantly reducing road closures and disruptions to the surrounding neighbourhood.

The unique three-dimensional properties of Kaynemaile's RE/8 mesh provides up to 70% reduction in solar gain and code compliant airflow, reducing heat transfer into the building significantly.

Atlanta Intersection

PROJECT

The Interlock Parking Garage

DESIGN

Wakefield Beasley & Associates

LOCATION

Atlanta, GA, USA

The Interlock development in Atlanta features Kaynemaile's range of modular screens. Designed to work with standard floor heights they are a cost-efficient way to transform a utilitarian parking garage structure.

Described by the property developer SJC Ventures as ‘transformative mixed use’, the Interlock features apartments, retail, office space and a myriad of hospitality and community focused options and has a focus on urban living and connecting with Atlanta’s booming West Midtown.

Kaynemaile reduces up to 70% of visible and infrared light waves from impacting on the building surface, providing an alternative route to solar gain protection for parking garages such as the Interlock.

This 800 space parking garage features almost 1000 square metres of our mesh screens across the facade.

Our flat screens give a seamless aesthetic to the facade design and require less sub-frame than traditional panel-sized products. The light weight of the mesh combined with the simple fixing system makes a fast installation schedule possible.

Kaynemaile helps with natural ventilation in the garage allowing code-compliant free-air movement through the almost 75% open area. This is thanks to the three-dimensional structure of the mesh with its low restricted cross-sectional area.

PROJECT

Carousel Shopping Centre Parking Garage

DESIGN

Scentre Group

LOCATION

Perth, Australia

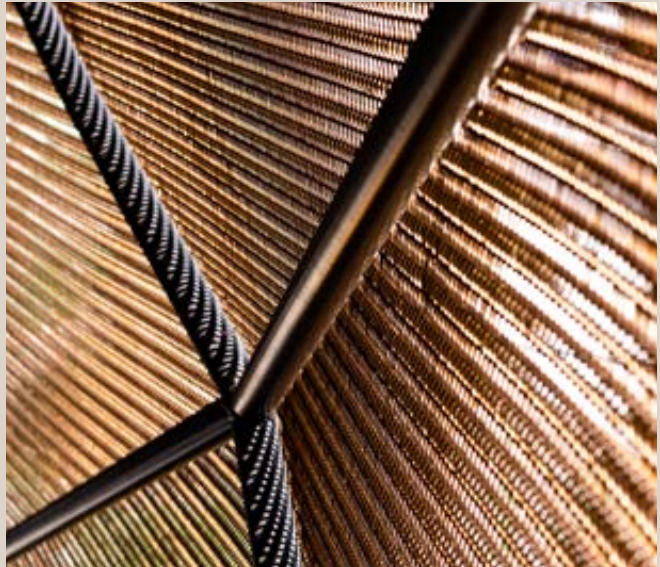

Kaynemaile worked with Scentre Group to develop the screening for the Westfield Carousel multi-level parking garage in Perth, Australia.

The facade is made up of a series of projecting pyramids with Kaynemaile mesh tensioned over top. The design covers all four sides of the large parking garage building with a total surface area of 650sqm.

The bronze coloured mesh was an ideal choice for this project creating a dynamic, shimmering effect with contrasting light areas over the pyramid forms. Installation was fast given the scale of the job thanks to our simple fixing systems.

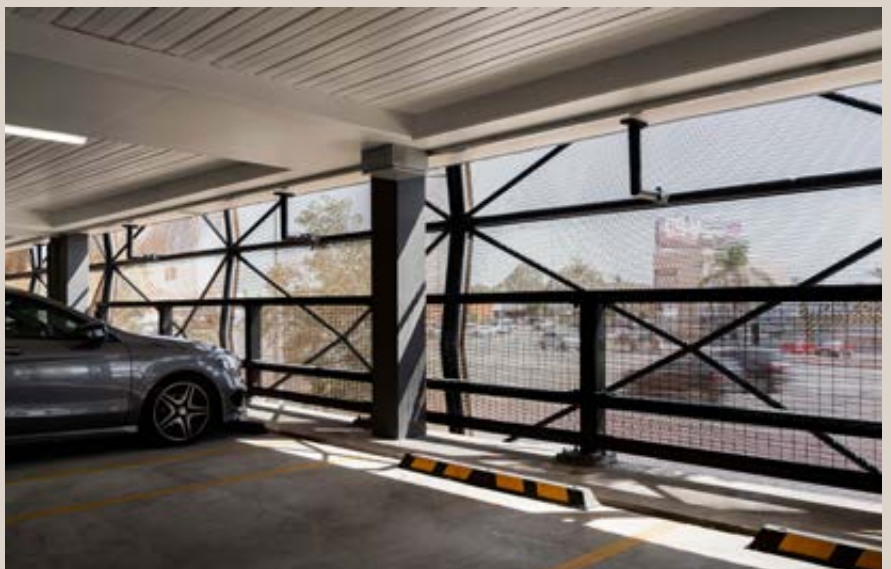

As Western Australia has a sub-tropical climate, using a material that cuts heat to the interior but maintains compliant air flow was crucial for the project. Kaynemaile's RE/8 mesh significantly reduces both radiant heat through direct sunlight and thermal conductive heat from entering the interior of a building by up to 70%. This gives you the ability to let daylight in and manage the passive solar gain—all while maintaining visual transparency.

RE/8 Bio-circular Architectural Mesh by Kaynemaile

Kaynemaile's Class A compliant polycarbonate mesh is a patented, world-leading innovation. With over 60 years of polycarbonate material science and research to call on, we know our mesh inside out. We think the benefits of our product are extraordinary.

RE/8 Bio-circular Architectural Mesh

RE/8 architectural mesh is comprised of an industry first cradle-to-gate carbon neutral polycarbonate by Covestro, a leading global producer of advanced polymers.

RE/8 is LEED enabled and supported by ISCC Plus certification.

Super Fast Installation

Our mesh goes up fast, cutting down the install time dramatically and saving costs. Our fixing systems are simple and we don't need the same level of sub-frame as metal products. This means our installed rate is more cost effective than metal or glass panel products.

Sun Shading

RE/8 architectural mesh significantly reduces radiant heat through direct sunlight (EMR) by up to 70%. This gives you the ability to let daylight in and manage the passive solar gain—all while maintaining visual transparency.

Lightweight and Unlimited Size

RE/8 architectural mesh is lightweight (3kgs per square metre) and is not limited by panel size. We can make our screens to any height or width without joins or distracting gaps. Making screens to the size you need gives you design freedom and cost efficiency.

Trusted Durability

Metal based materials corrode and oxidise in coastal conditions. RE/8 mesh does not. We use colour-fast pigments that will not stain your building when it rains.

Unbeatable Strength

Our mesh is made from the highest performing Makrolon® RE Polycarbonate. It is extremely robust and impact resistant. Thermally stable from -40°F to 248°F (-40°C to 120°C). Our mesh holds true to its tensile strength.

Simple Attachment Systems

Our attachment methods for both exterior and interior systems are simple and we provide these as part of our system. We can help you with detailing and specification information. Contact us at sales@kaynemaile.com

Kaynemaile's RE/8 bio-circular architectural mesh can be made to any height or width without the limitation of a panel size.

It is lightweight and goes up fast, dramatically reducing project schedules. RE/8 mesh is LEED enabled, tough and impact resistant, giving you unmatched design freedom for your next project.

RE/8 bio-circular architectural mesh by Kaynemaile is lightweight and doesn't need the same level of fixings or substructure as metal products. Our screens go up fast cutting down install time dramatically and saving costs.

Features

Weight: 0.6lbs/ft² (3kg/m²)

Sizes: Unlimited in size.

Colour range: Our mesh comes in a range of solid and translucent colours. For colour range see page 57 of this booklet.

Supplied hardware: Kaynemaile screens are supplied with our RE/8 bio-circular architectural mesh and fixing system to suit your sub-frame.

Hanging system

Our Kaynemaile screens utilise our 0.5in (12.7mm) stainless steel tube at the top and bottom and our 0.9in wide x 0.39in high (23mm x 10mm) low profile anodised aluminium track at the sides.

Frame requirements

Our screens are under tension vertically and need a frame around the full perimeter. The size of the screen will determine the sub-frame requirements.

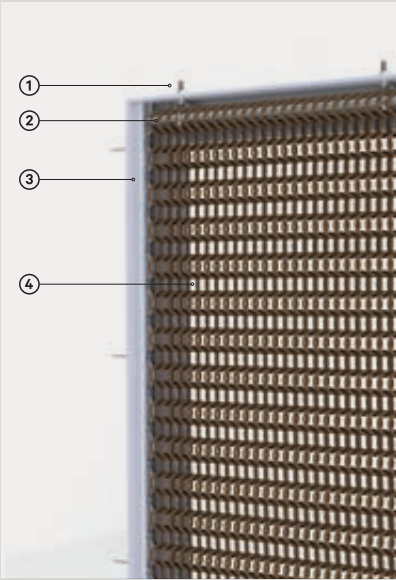

We can provide you with wind loading details so you can accurately determine your sub-frame requirements. Our ideal sub-frame for large screens is made from steel equal angle.

Screen tension

Our RE/8 mesh screens are tensioned vertically.

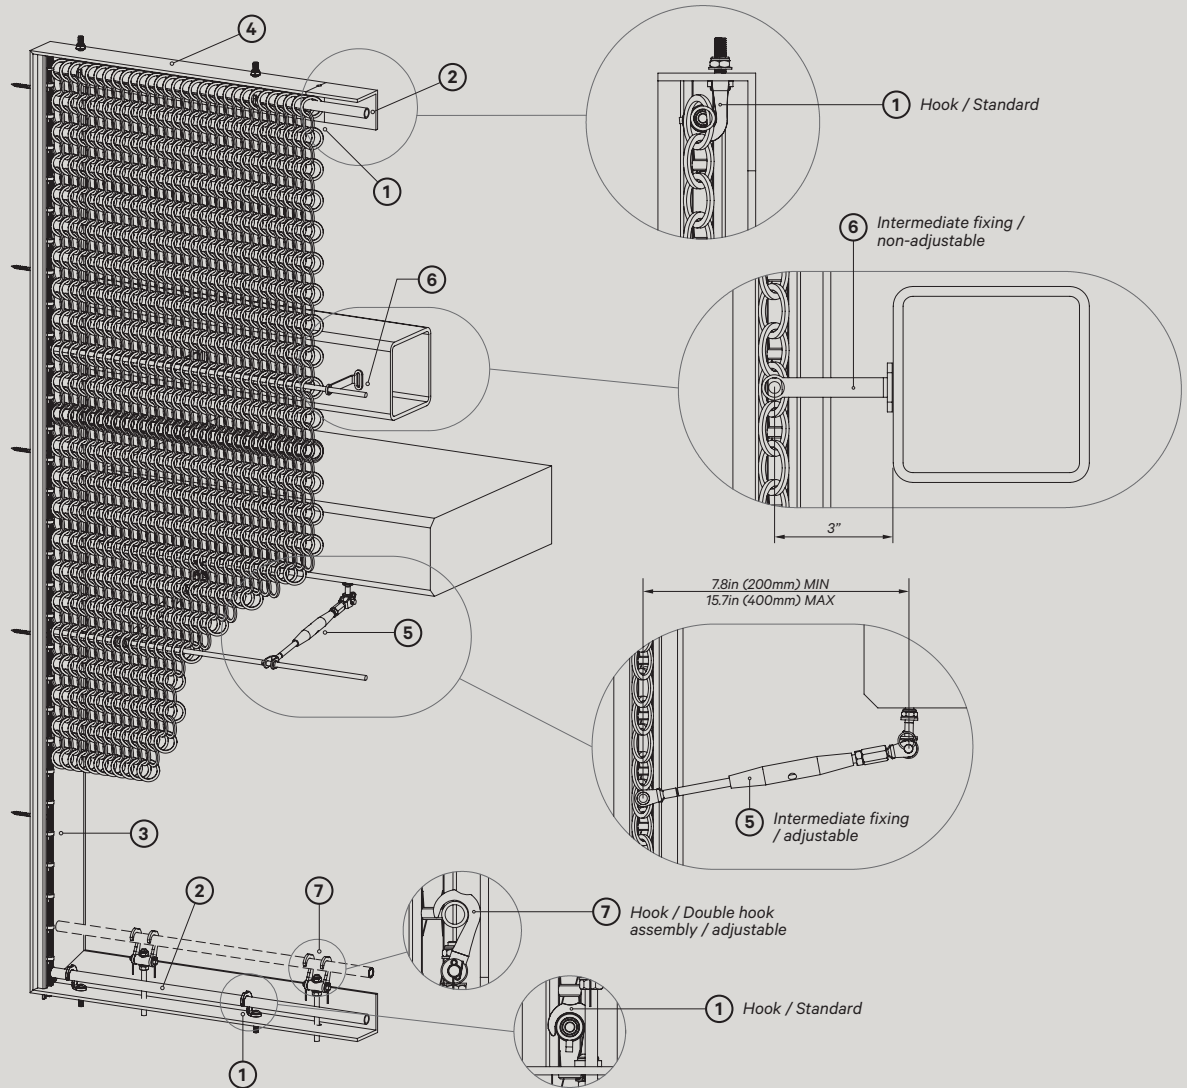

How to specify your screens

To specify your Kaynemaile Exterior Flat Screen just let us know the approximate width and height and we will advise on fixing details. If your screen is over 13ft (4m) in height it may require intermediate fixings.

Typical Kaynemaile Fixing Details

① Standard 0.12in (3mm) thick stainless steel hook. Typical hook spacing is 12in (300mm) however spacing varies based on the screen size and the project requirements. Hook fixings are M6 metric (0.25in).

② Standard 0.5in (12.7mm) stainless steel tube through top and bottom mesh rows.

③ Standard aluminium low profile track. Finish is silver anodised. Uses 0.1574in fixings (M4 metric) at 7.87in (200mm) spacing.

④ Typical steel equal angle full perimeter sub-frame. Recommended minimum size is 2.95" x 2.95" (75mm x 75mm). Note: Sub-frame is not supplied.

⑤ Adjustable intermediate fixing. Screens over 13ft high (4m) may require intermediate fixings. An adjustable fixing is used where a backspacing exceeds 2.5in (70mm) or when the intermediate fixing is required to attach to the underside of a concrete slab or sub-frame.

⑥ Non-adjustable fixing. Screens over 13ft high (4m) may require intermediate fixings.

⑦ Adjustable double hook arrangement. Typically used for large screens that may require spot-applied tension adjustments or screens with non-parallel bottom edges. Uses M6 metric fixing (0.25in).
