EXECUTIVE SUMMARY

Langan Engineering and Environmental Services, LLC (Langan, f/k/a Langan Engineering and Environmental Services, Inc.) completed a Phase I Environmental Site Assessment (ESA) of the Federal Courthouse Garage property located at Southeast 4th Avenue and Southeast 11th Street in Fort Lauderdale, Broward County, Florida (the "subject property") under the written authorization of Desman Design Management Group (DESMAN, "Client"). The city of Fort Lauderdale ('the User") has contracted DESMAN to prepare a design criteria package on their behalf for the construction of the future federal courthouse parking garage on the subject property.

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with the design criteria documentation for a proposed parking garage.

Subject Property Layout

The subject property is located on the northeast corner of the intersection of Southeast 11th Street and Southeast 4th Avenue and associated with the future federal courthouse on Southeast 3rd Avenue. It is an approximately 1.67-acre vacant parcel identified by the Broward County Property Appraiser as Parcel ID Number 5042 10 76 0020. The subject property is enclosed by temporary barriers/chain-link fence on the east, south, and west boundaries, and a silt fence on the north. It is accessed via a gate along Southeast 11th Street to the south. A temporary office trailer is located on the eastern portion of the subject property. Langan observed parked cars, and heavy equipment and machinery, reportedly associated with the construction activities on the west adjoining property. A lift station and generator were also observed on the southeast corner of the subject property. The generator was reportedly used to power the office trailer on the subject property.

Subject Property Current Use

The subject property is currently being utilized by Brasfield & Gorrie for a temporary construction office and associated parking and storage of heavy construction equipment and machinery for the construction of the new federal courthouse on the west adjoining property.

Subject Property History

The subject property was undeveloped land from as early as 1940. By the late 1950s, the eastern portion of the subject property was a paved parking lot. The western portions remained relatively unchanged until the early 1970s when land clearing activities were apparent. No significant changes were observed through 2023.

Adjoining Properties and Surrounding Area

The adjoining and surrounding areas were developed with roadways and sparse residential structures from as early as 1928, and the Tarpon River adjacent to the north. Residential development increased from the late 1940s through the 1960s as the area became more urbanized. The east adjoining property was developed with a church by the late 1940s and paved parking lot followed by a car dealership by the early 1950s. By the 1990s, some of the residences

DRAFT

were converted into use as offices. The surrounding has remained relatively unchanged from the late 1990s to present-day.

Conclusions

Langan completed a Phase I ESA of the subject property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

Table ES-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Langan did not identify RECs.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs.
De Minimis Conditions
Langan did not identify de minimis conditions.
Significant Data Gaps
Langan did not identify significant data gaps.

DRAFT

1. INTRODUCTION

Langan Engineering and Environmental Services, LLC (Langan, f/k/a Langan Engineering and Environmental Services, Inc.) completed a Phase I Environmental Site Assessment (ESA) of the Federal Courthouse Garage property located at Southeast 4th Avenue and Southeast 11th Street in Fort Lauderdale, Broward County, Florida (the "subject property") under the written authorization of Desman Design Management Group (DESMAN, "Client"). The city of Fort Lauderdale ('the User") has contracted DESMAN to prepare a design criteria package on their behalf for the construction of the future federal courthouse parking garage on the subject property. A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with the design criteria documentation for a proposed parking garage.

1.1. Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (REC) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

1.2. Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

1.2.1. Records Review and Local Government Interviews

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Based on information in the environmental database report, Langan did not consider submitting FOIA requests to supplement the database listings for adjoining or surrounding area properties necessary.

Langan reviewed online records including the Florida Department of Environmental Protection (FDEP) Information Portal and Oculus databases and the Broward County ENVIROS database. Langan supplemented the third party-provided historical records with review of online historical record sources including Google Earth Pro.

1.2.2. Site Reconnaissance and Owner/Operator/Occupant Interviews

On 23 January 2024, Maria DeBianchi, Staff Engineer of Langan, under supervision of Candace E. Chin Fatt, Senior Project Manager and an Environmental Professional, completed the site reconnaissance. Langan was accompanied by Gary Burk, Senior Superintendent of Brasfield & Gorrie and key site manager of the subject property, during the site reconnaissance. The site

DRAFT

reconnaissance consisted of traversing the exterior of the subject property to conduct visual observations and progressed to property boundaries to observe the adjoining and surrounding properties. The adjoining properties were observed from the subject property or from public rights-of-way. The weather at the time of the site reconnaissance was approximately 76°F and sunny. Limiting conditions encountered during the site reconnaissance, if any, are discussed in Section 8.3.

Mr. Burk conveyed to Langan that he was not aware of any storage tanks or monitoring wells on the subject property. Mr. Burk also stated that the subject property is not connected to public utilities and indicated he is not aware of any past or present environmental concerns in connection with the subject property.

1.2.3. Evaluation, Report and Parts Used in Concert

Langan evaluated the information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 1.4.

1.2.4. Non-ASTM Scope Services

The scope of services for the Phase I ESA did not include non-scope ASTM considerations, including per- and polyfluoroalkyl substances (PFAS).

1.3. User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AULs) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the user regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the user state the reason the Phase I ESA was requested. A summary of the user's responses is provided in Appendix B and relevant information provided by the user is discussed in applicable sections of this report.

Unless specifically included in the scope of services, Langan did not complete a title search or a search for environmental liens or AULs, as that is the responsibility of the user. If the user requested that Langan complete such searches on the user's behalf, the information was supplied to Langan by a vendor, and to the vendor by government sources; therefore, neither Langan nor the vendor can verify the completeness or accuracy of the title search, or AUL searches.

1.4. Limiting Conditions/Deviations

Langan was unable to observe the ground surface throughout approximately 5% of the subject property due to parked cars, machinery, and soil stockpiles. This limiting condition did not impact Langan's conclusions based on review of aerial photographs and other historical resources.

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

DRAFT

1.5. Data Gaps

Data gaps, if encountered, are discussed throughout the report. Significant data gaps, if any, are summarized in Section 5.0.

DRAFT

2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

The following sections describe the subject property location, ownership, physical setting, and current layout and operations.

2.1. Location, Legal Description, and Ownership

The subject property is located on the northeast corner of the intersection of Southeast 11th Street and Southeast 4th Avenue. It is an approximately 1.67-acre vacant parcel identified by the Broward County Property Appraiser as Parcel ID Number 5042 10 76 0020, and currently owned by the United States of America. A legal description of the subject property is provided on the Property Appraiser website. A copy of the subject property summary is provided in Appendix E.

2.2. Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area are discussed below.

2.2.1. Topography

The 2017 United States Geological Survey (USGS) 7.5-minute quadrangle topographic map for Fort Lauderdale South, Florida depicts the subject property at an elevation of approximately 3 feet above mean sea level (amsl). The regional topography slopes downward toward the southeast and the Atlantic Ocean, which is located approximately 2 miles east of the subject property.

2.2.2. Geology

According to the U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) Soil Survey Geographic (SSURGO) data for Broward County, soils at the subject property are comprised of *Immokalee, Dade, and urban land.* According to the EDR Physical Setting Source Information, the dominant soil types at the property are *fine sand* with varying infiltration rates.

According to the United States Geological Survey (USGS), "Biscayne Aquifer of Dade and Broward Counties, Report of Investigations No. 17", Southeastern Florida is underlain by alternating sequences of cemented and uncemented sedimentary deposits consisting of quartz and calcareous sands, limestone, and sandstone, which overlie the Mesozoic Age igneous basement rocks. These sediments were deposited from the Miocene to the Pleistocene Epochs (25 Ma to 0.01 Ma ago).

The primary geologic formations that are located within Broward Country are the Pamlico Sand Formation, the Miami Oolite Formation, the Fort Thompson Formation, the Anastasia Formation, the Key Largo Formation, the Tamiami Formation, and the Hawthorn Formation. The first formation encountered is the Pamlico Sand, which consists of a pale-orange to brown quartz sand that ranges from coarse to fine-grained in particle size. Within the Pamlico Sand Formation, localized zones of organic and fine-grained soils may be encountered. The next formation encountered is the Miami Oolite. The Miami Oolite is typically a white to yellowish massive cross-bedded oolitic limestone containing varying amounts of sand, usually in solution cavities. The next formations encountered are the Anastasia, the Fort Thompson, and the Key Largo. The Fort Thompson consists of pale-orange to yellow-brown, mottled, well-cemented limestone and is interbedded with lenses of shelly sandy micrite. The Anastasia is comprised of highly porous coralline limestone. These formations are probably interfingered near the Property. The Tamiami

DRAFT

and Hawthorn Formations underlie the above. The Tamiami consists of a partially cemented, gray sandy shelly limestone at the top and a fine to very fine-grained shelly quartz sand, with increasing silt and clay content toward the bottom. The Hawthorn Formation is primarily comprised of clay.

2.2.3. Hydrogeology

The Pamlico Sand, Miami Oolite Formation, the Anastasia Formation, the Key Largo limestone, and the Fort Thompson Formation compose the Biscayne Aquifer, which is the primary source of drinking water in southeastern Florida. According to the USGS, the Biscayne Aquifer is unconfined and recharged by local rainfall, and the regional hydraulic gradient is toward the southeast, but can be influenced seasonal variations and by canals, surface water bodies and pumping wells.

Surface water bodies are not present within the boundary of the subject property. The nearest surface water body is the Tarpon River adjoining the subject property to the north. Information regarding subject property-specific groundwater flow direction was unavailable, however, according to a 2019 site assessment conducted on the east adjoining property, groundwater flow was reported to be towards the northeast. Groundwater flow direction is expected to be towards the north and the Tarpon River.

2.3. Subject Property Description

Subject Property Layout

The subject property is located on the northeast corner of the intersection of Southeast 11th Street and Southeast 4th Avenue and associated with the future federal courthouse on Southeast 3rd Avenue. It is an approximately 1.67-acre vacant parcel identified by the Broward County Property Appraiser as Parcel ID Number 5042 10 76 0020. The subject property is enclosed by temporary barriers/chain-link fence on the east, south, and west boundaries, and a silt fence on the north. The Tarpon River is immediately north of the subject property. It is accessed via a gate along Southeast 11th Street to the south. A temporary office trailer is located on the eastern portion of the subject property. Langan observed parked cars and heavy equipment and machinery, reportedly associated with the construction activities on the west adjoining property. A lift station and generator were also observed on the southeast corner of the subject property. The generator was reportedly used to power the office trailer on the subject property.

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix D.

2.4. Current Subject Property Use

The subject property is currently being utilized by Brassfield & Gorrie as a temporary office and associated parking and a construction staging area for the federal courthouse building construction on the west adjoining property. According to the key site manager, the subject property is not connected to any of the public utilities. However, the utility providers in the area of the subject property are listed in the table below.

Table 2-1 Utility Providers

Utility	Providers
Electricity	Florida Power & Light (FPL)

DRAFT

Utility	Providers
Water and Sewer	City of Fort Lauderdale

2.5. Hazardous Substances and Petroleum Products

Langan did not observe hazardous substances, petroleum products or evidence of leaks, spills, pools of liquid or releases such as staining, or sheens associated with hazardous substances or petroleum products.

2.5.1. Underground Storage Tanks (USTs)

Langan did not observe evidence of USTs on the subject property.

2.5.2. Aboveground Storage Tanks (ASTs)

Langan did not observe evidence of ASTs on the subject property.

2.5.3. Drums, Totes, and Intermediate Bulk Containers

Langan did not observe or identify evidence of drums, totes, and/or intermediate bulk containers containing hazardous substances and/or petroleum products at the subject property.

2.5.4. Other Chemical Storage, Containers, or Equipment

Langan did not observe other chemical storage, containers, or equipment associated with hazardous substances and petroleum products on the subject property.

Langan observed a pole-mounted transformer on the southern boundary of the subject property. The transformer was not labeled as "non-PCB containing" and appeared to be in good condition with no evidence of leaks or discharges.

Langan observed a mobile generator on the southeast corner of the subject property. According to the key site manager, Mr. Burk, the generator is diesel fueled, and will be used to temporarily power the office trailer until the subject property is connected to FPL. Mr. Burk reported that the generator was not active at the time of Langan's site reconnaissance. No evidence of leaks or releases were observed.

2.6. Air Emissions

When in use, the mobile generator would be a source of air emissions, however, it was not yet in operation at the time of Langan's site reconnaissance and therefore was not considered to be a concern. No other sources of air emissions were observed at the subject property during the site reconnaissance.

2.7. Waste Management

The following sections describe current hazardous and non-hazardous waste streams, and observations of fill areas or other solid waste throughout the subject property.

2.7.1. Hazardous Waste

Langan did not observe or identify evidence of hazardous waste at the subject property.

2.7.2. Non-Hazardous Waste

Langan did not observe or identify evidence of non-hazardous waste at the subject property.

DRAFT

2.7.3. Fill Areas or Solid Waste

Langan did not observe areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) that suggest the presence of garbage, construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting solid waste disposal.

Langan observed two roll-off waste containers on the eastern portion of the subject property. The containers are reportedly used to disposed of waste from the west adjoining construction activities. The containers were observed to be in good condition without obvious indications of a release or material threat of a future release. Solid waste is picked up by Coastal Waste & Recycling on an as-needed basis.

Additionally, Langan observed soil stockpiles on the northern portion of the subject property. According to Mr. Burk, the soil consists of topsoil and excess graded soil from portions of the subject property and will be used for onsite development. The soil did not originate from sources other than the subject property.

2.8. Wastewater

Langan did not observe or identify evidence of wastewater, septic systems or cesspools at the subject property.

2.9. Storm Water

Storm water at the subject property percolates through pervious areas. Langan did not observe evidence of impact (e.g., sheens, staining) to storm water pathways.

DRAFT

3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

The following sections provide summaries of the historical uses of the subject property, and available information regarding documented environmental conditions associated with the historical uses.

3.1. Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix F.

Table 3-1 Subject Property History

Time Period	Historical Discussion
1940s	The subject property appears to be undeveloped land from as early as 1940.
1950s –1960s	By 1958, the eastern portion of the subject property appears developed as a paved parking lot and the remaining portions appear to be vacant, grass covered. An unpaved road traversing from west to the east toward the paved parking area is apparent.
1970s – Present	By 1971, the western portion of the subject property appears to be cleared with evidence of soil piles and earth work activities. The western portions appear to be vacant, grass-covered land by 1973. The subject property remained relatively unchanged through 2024.

3.2. Regulatory Database Review

The subject property was not identified in the regulatory databases searched. The environmental database report is attached in Appendix C.

3.3. Prior Report Review

Langan was not provided with prior reports related to the subject property.

DRAFT

4. ADJOINING PROPERTIES AND SURROUNDING AREA

The following sections describe current and historical uses of and database listings for adjoining properties and the surrounding area.

4.1. Current Use of Adjoining Properties and Surrounding Area

The current use of adjoining and surrounding properties is summarized in Table 4-1.

Table 4-1 Current Use of Adjoining Properties and Surrounding Area

Direction	Adjoining Properties	Surrounding Area
North	Tarpon River	Residential
East	Parking Lot (1005 S. Federal Highway)	Commercial and US 1
South	Parking Lot (500 SE 11th Street) for the Lorenzo Nissan Fort Lauderdale Dealership and Townhouses (402–408 SE 11th Street)	Commercial and Residential
Southwest	Celebrity Mortgage (320 SE 11th Street)	Commercial and Residential
West	Under construction (315 SE 11th Street and 320-321 SE 10th Court)	Commercial and Residential

Langan did not observe obvious conditions likely to represent environmental concerns for the subject property from current uses of adjoining or surrounding properties.

4.2. Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix F.

Table 4-2 Historical Use of Adjoining Properties

Direction	Adjoining Properties
North	The north adjoining property is depicted as the Tarpon River between the 1940s and the present day. Residential development is visible beyond the Tarpon River between 1949 and the present day. By 1958, more residences appear constructed, and by 1968, the original residences are no longer visible, as a new configuration of residential structures are evident. The properties appear to have remained in similar configuration from the 1970s through the present day. Langan does not consider the historical use of the north adjoining property an environmental concern for the subject property.
East	The east adjoining property appears undeveloped in 1940. By 1949, a paved road (Southeast 5th Avenue) is visible. By 1958, a paved parking lot connected to the subject property and associated with a church, and an automotive dealership is evident, and parked vehicles are present. The east adjoining configuration has remained relatively unchanged from 1958 to the present day. Langan does not consider the historical use of the east adjoining property an environmental concern for the subject property given the information reviewed in the files (See Section 4.3.2).
South	The south adjoining property appears undeveloped in 1940. Southeast 11th Street appears developed by 1949. By 1950, the south adjoining property (400-410 SE 11th Street) appears

DRAFT

Direction	Adjoining Properties
	developed with two structures, and by 1973, the eastern portion of the south adjoining property appears developed with an apartment building. The south adjoining property appears relatively unchanged until 1999, when the apartment building appears to have been razed and redeveloped as a paved parking lot. By 2007, the western portion of the south adjoining property appears to have been redeveloped with the current townhouses. The south adjoining property has remained relatively unchanged to the present day. Langan does not consider the historical use of the south adjoining property an environmental concern for the subject property.
West	The west adjoining property appears undeveloped from as early as 1928. Southeast 4th Avenue is depicted as formerly Perkins Avenue. By 1949, the west adjoining property appears developed with single-family residences (1001-1021 SE 4th Avenue). The properties at 315 SE 11th Street and 320 SE 10th Court were listed occupied by residents between 1948 and 1980, and then by law offices from 1986 until 2005. The west adjoining property appears relatively unchanged until 2023 when the property appears cleared. The west adjoining property is currently in the initial stages of construction. Langan does not consider the historical use of the west adjoining property an environmental concern for the subject property.

The adjoining and surrounding areas were developed roadways and sparse residential structures from as early as 1928. Residential development increased from the late 1940s through the 1960s as the area became more urbanized. By the 1990s, some of the residences were converted into offices. The surrounding has remained relatively unchanged from the late 1990s to present-day.

Langan does not consider the historical uses of the surrounding area properties an environmental concern for the subject property.

4.3. Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property (see Section 8.2). Langan did not consider review of regulatory agency files necessary to evaluate potential RECs for the subject property unless discussed in Section 4.3.1 or 4.3.2 below.

4.3.1. Adjoining Properties

Database listings for adjoining properties are summarized as follows.

Sheridan & I95 Citgo – 500 SE 11th Court (south adjoining, inferred down-gradient)

This facility is mapped on the south adjoining property and listed on the EDR Historical Auto database. According to the database report, it operated as a gasoline service station, not elsewhere classified (NEC), from 2011 through 2014. However, based on a review of other historical sources (i.e., aerial photographs, city directories) this address was developed as a residence with a salon from as early as 1962, and converted to an office in at least 2005. This address was also identified located >350 feet south of the subject property. Furthermore, based on the name of the listing it appears this is in another city and was incorrectly mapped. Based on the actual distance from the subject property and historical resource information, this listing is not considered to represent an environmental concern for the subject property.

DRAFT

4.3.2. Surrounding Area

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). Those warranting further discussion in the context of potential to represent an environmental concern for the subject property are discussed below.

Star Motors/Lorenzo Nissan Fort Lauderdale/Marlin Imports, Inc. – 1051 S. Federal Highway (approximately 229 feet east, inferred down-gradient)

This facility was identified on the Leaking UST (LUST), UST, Division of Waste Management Contaminated Site (DWM CONTAM), Financial Assurance, Broward County Hazardous Material (HM), AST, Hazardous Waste (Haz Waste), Resource Conservation and Recovery Act (RCRA) NonGenerator/No Longer Regulated (NLR), Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), and UST Finder databases.

According to the information obtained from the regulatory files reviewed, this facility has operated as an automotive sales and maintenance facility for over 60 years. The facility consists of a showroom and maintenance area that contains a north lift line with 10 hydraulic lift areas and a south lift line with 14 hydraulic lift areas. According to an FDEP Stationary Tank Inventory System Information Report dated 9 May 1992, the facility maintained seven storage tanks listed in the table below:

Tank Number	Size (gallons)	Contents	Type
1	275	Waste Oil	AST
2	275	New/Lube Oil	AST
3	1,000	Leaded Gasoline	UST
4	1,000	Waste Oil	UST
5	550	New/Lube Oil	AST
6	550	Miscellaneous Petroleum-Based Products	AST
7	275	Waste Oil	AST

According to a Storage Tank Registration Form dated 11 June 1998, the tanks were non-regulated and stored in the building.

On 17 November 2014, a Source Removal Report and No Further Action Proposal (SRR/NFAP) was prepared by CRB Geological & Environmental Services, Inc. (CRB). According to the SRR/NFAP, previous assessments were completed for a property transaction, and identified concentrations of polynuclear aromatic hydrocarbon (PAH) exceeding the Chapter 62-777 Florida Administrative Code (F.A.C.) Soil Cleanup Target Level (SCTLs) in the soil. The soil impacts were identified in the swale area on the western portion of the property and attributed to street surface runoff from Southeast 11th Street. Excavation activities were completed in October 2014 by CRB. Approximately 147.52 tons of impacted soil was excavated and transported offsite for disposal. Following excavation activities, CRB collected confirmation soil samples from the excavation sidewalls for laboratory analysis of PAHs by EPA Method 8270. Following backfilling activities, CRB installed one temporary monitoring well in the center of the former excavation and collected a confirmation groundwater sample for laboratory analysis of PAHs by EPA Method 8270. The

DRAFT

analytical results for the confirmation samples collected confirmed no detection of PAHs above their respective cleanup target levels. Based on the results, CRB recommended approving a No Further Action (NFA). On 8 December 2014, the Broward County Pollution Prevention Division (Division) issued a correspondence noting that they concurred that the requirements of NFA had been met. The Division issued further correspondence on 17 March 2015 in response to a Monitoring Well Abandonment Report dated 5 March 2015 by CRB, noting that the status of the case was reclassified to inactive.

A Discharge Report Form (DRF) was filed on 11 February 2019, for evidence of a discharge from the hydraulic fluid associated with the in-ground automotive lifts based on groundwater data collected during a Phase II ESA. Subsequently, a Site Assessment Report (SAR) dated 27 September 2019 was prepared by Grove Scientific & Engineering (GSE). According to the SAR, a Phase II ESA was completed by EE&G Environmental Services, LLC (EE&G) in September 2018 as part of due diligence for a property transaction. The Phase II ESA identified concentrations of total petroleum hydrocarbons (TPH) exceeding the GCTL in two of the groundwater samples collected in the vicinity of the inground hydraulic lifts. As such, the DRF was filed.

GSE's SAR included the advancement of eight soil borings and installation of five shallow monitoring wells and one deep monitoring well within the maintenance area. A total of eight soil samples were collected from each boring location at the 3-5' interval for laboratory analysis of volatile organic aromatics (VOAs) by EPA Method 8260, PAHs by EPA Method 8270, and TPHs by FL-PRO Method. A concentration of benzo(a)pyrene was detected exceeding the residential SCTL at SB-3. The remaining soil samples did not exceed either laboratory method detection limits (MDLs) or the SCTLs. A total of six groundwater samples were also collected for laboratory analysis of the same parameters as the soil samples. Analytical results did not detect any of the contaminants exceeding the MDLs or GCTLs. Groundwater flow was reported to be towards the northeast. Based on the soil and groundwater analytical results, GSE recommended NFA status for the subject site.

On 7 October 2019, the Environmental Engineering and Permitting Division (Division, previously the Pollution Prevention Division) issued correspondence in response to the SAR submitted by GSE, requesting delineation of the soil and groundwater contamination plumes.

Additional soil and groundwater assessments were completed in October 2019 and March 2020, and presented in a SAR Addenda (SARA) dated 5 December 2019 and Site Rehabilitation Completion Report and NFA Proposal (SRCR/NFAP) dated 31 March 2020. The delineation sampling completed confirmed that soil and/or groundwater contaminants of concern were not exceeding their respective cleanup target levels. As such, GSE recommended NFA.

The Division issued a Site Rehabilitation Completion Order (SRCO) on 12 June 2020.

This facility currently maintains a Hazardous Material License (#03656) for generating waste including petroleum products, coolant, batteries, absorbents, solvents, and fluorescent lightbulbs. The license is valid until 28 February 2025, and no violations have been reported.

Based on the current regulatory closure status for the reported discharge, the cross-gradient location of the facility, and lack of violations, this listing is not considered to represent an environmental concern for the subject property.

DRAFT

5. CONCLUSIONS, FINDINGS, AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the subject property at Southeast 4th Avenue and Southeast 11th Street in Fort Lauderdale, Broward County, Florida. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report.

This assessment has revealed the following RECs, CRECs, HRECs, de minimis conditions, and significant data gaps in connection with the subject property as presented in Table 5-1.

Table 5-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Langan did not identify RECs.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs.
De Minimis Conditions
Langan did not identify de minimis conditions.
Significant Data Gaps
Langan did not identify significant data gaps.

DRAFT

6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

DRAFT

Candace E. Chin Fatt
Senior Project Manager (Environmental Professional)

Resumes outlining the qualifications of the project team and the Environmental Professional are included in Appendix G.

8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

8.1. ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

DRAFT

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).A historical recognized environmental condition is not a recognized environmental condition.

DRAFT

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

DRAFT

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

8.2. Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix C contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

DRAFT

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

LAST: The file for Leaking Aboveground Storage Tanks. Please remember STCM does not track the source of the discharge so the agency provides a list of facilities with an aboveground tank and an open discharge split by facilities with aboveground tanks only and facilities with aboveground and underground tanks.

A review of the LAST list, as provided by EDR, and dated 10/23/2023 has revealed that there is 1 LAST site within approximately 0.5 miles of the target property.

DRAFT

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 13 UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

ENG CONTROLS: The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass avariety of engineered remedies to contain and/or reduce , contamination , and/or physical barriers intended to limit access to property ECs include fences, signs, guards, landfill caps, provision of potable water , slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

A review of the ENG CONTROLS list, as provided by EDR, and dated 08/11/2023 has revealed that there are 2 ENG CONTROLS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

HAZ WASTE: The records in this data set are generated by county SQG Assessment, Notification and Verification Programs on-site surveys (see 403.7225 FS). The waste records are wastes observed during county inspections. Even though this state program targets SQGs and VSQGs for outreach, some counties choose to additionally look at their LQGs.

A review of the HAZ WASTE list, as provided by EDR, and dated 08/14/2023 has revealed that there are 6 HAZ WASTE sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 11 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 21 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SHERIDAN & I95 CITGO	500 SE 11TH CT	SSE 0 - 1/8 (0.022 mi.)	A1	8

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical

Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DRAFT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/19/2023
Date Data Arrived at EDR: 10/03/2023
Date Made Active in Reports: 10/19/2023
Number of Days to Update: 16

Source: EPA
Telephone: N/A
Last EDR Contact: 01/02/2024
Next Scheduled EDR Contact: 04/08/2024
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

DRAFT

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

DRAFT

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

DRAFT

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

DADE CO LW: Liquid Waste Transporter List
The Liquid Waste Transporter permit regulates the transportation of various types of liquid and solid waste, including hazardous waste, waste oil and oily waste waters, septic and grease trap waste, biomedical waste, spent radiator fluid, photo chemical waste, dry sewage sludge, and other types of non-hazardous industrial waste. The Liquid Waste Transporter permits needed to protect the environment and the public from improperly handled and transported waste.

Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

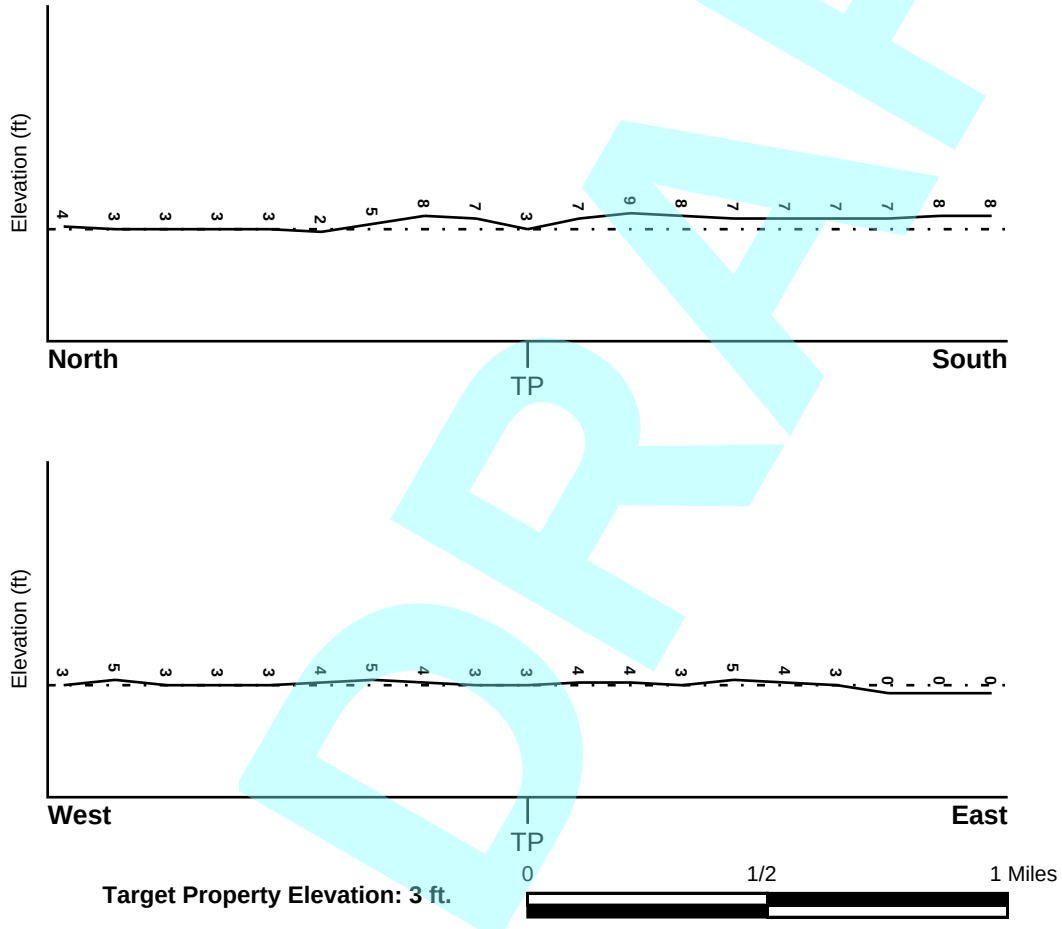
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 3 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
12011C0557H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
12011C0576H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FORT LAUDERDALE SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	5 inches	48 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	48 inches	57 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
4	57 inches	57 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 2

Soil Component Name: Dade

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

DRAFT

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 168 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	27 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	27 inches	35 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	35 inches	35 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: Department of Environmental Protection
Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Public Water System (PWS) Wells (Non-Federal)
Department of Environmental Protection

1.0 INTRODUCTION

1.1 SUMMARY

CRB Geological & Environmental Services, Inc. (CRB) has completed this Source Removal Report (SRR) for the Nissan facility, located at 1051 South Federal Highway, in Fort Lauderdale, Broward County, Florida (the "Site"). This SRR was prepared in accordance with the interim source removal provisions of Rule 62-780.500 of the Florida Administrative Code (F.A.C.) for the non-petroleum discharge. CRB prepared this SRR on behalf of AutoNation.

As part of assessment activities conducted during a property transaction, soil impacts in excess of the Chapter 62-777, Florida Administrative Code (F.A.C.) Soil Cleanup Target Levels (SCTLs) for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and the benzo(a)pyrene equivalents were reported in a swale area on the western portion of the Site. To address impacted soils and to prevent potential leaching and migration to the groundwater, soil source removal activities were initiated by excavating impacted soils and disposing of the soil at a landfill licensed to accept said material. In accordance with Rule 62-780 Florida Administrative Code (F.A.C.), notification of the source removal activities was submitted to the Florida Department of Environmental Protection (FDEP). At the conclusion of the excavation activities, confirmation soil samples were collected from the north, south, and west walls of the excavation. Bottom samples were not collected because the groundwater was encountered, and eastern confirmation samples could not be collected due to the excavation abutting the building and building footers. The results of the final confirmation samples indicated that all identified impacted soils had been removed from this area of the Site, and no groundwater impacts were identified. CRB recommends the approval of a No Further Action (NFA) for the Site.

A Site Location Map and Site Map with Excavation & Sampling Locations are included as Figures 1 and 2, respectively.

DRAFT

1.2 SITE DESCRIPTION & CURRENT SITE OPERATIONS

The Site consisted of an automotive dealership with new and used car sales and a maintenance shop located in Township 50 South, Range 42 East, Section 10.

1.3 PREVIOUS SITE ASSESSMENT ACTIVITIES

During a property transaction, soil samples were collected and analyzed from the Site, including two (2) samples in the swale area. These samples were collected by another environmental consultant and also split with CRB. Results of the analyses by both CRB and the other consultant identified benzo(a)pyrene and benzo(a)pyrene equivalents exceedances in soil samples SB-3W[1] and benzo(a)anthracene, benzo(a)pyrene, and benzo(a)pyrene equivalents exceedances in soil sample SB-4. Contamination was not detected in any other areas of the Site during this property transaction.

To further delineate the soil impacts, CRB mobilized to the Site on September 17, 2014 to collect an additional twelve (12) soil samples from the swale area. Results of this additional sampling identified polycyclic aromatic hydrocarbon (PAH) impacts throughout the swale area. The PAH soil impacts were determined to be the results of street surface runoff from SE 11th Street, channeled into the swale area through a natural ditch-like feature.

The CRB laboratory analytical reports and chain of custody records are included in Appendix II, and a summary of the soil analytical results is included in Table 1. The locations of the soil samples are shown on Figure 2.

DRAFT

[1] Soil sample SB-TW-3E was field analyzed with an OVA by consultant other than CRB but not laboratory analyzed. The filtered OVA reading for this sample was reported as 2.2 ppm.

2.0 SOIL SOURCE REMOVAL & CONFIRMATION SOIL SAMPLING

2.1 DESCRIPTION

As discussed above, PAH impacts were identified during a property transaction in the surficial soils in a swale area west of the structure at the Site. To address and remove these soils, CRB undertook the excavation of impacted soils using a rubber tire backhoe and the collection of confirmation soil samples to ensure completeness of the removal activities. In accordance with Chapter 62-780, notification was submitted to the Florida Department of Environmental Protection (FDEP) on October 20, 2014. A copy of this notification is included in Appendix I. The location of the excavation is shown on Figure 2.

2.2 EXCAVATION & CONFIRMATION SAMPLING ACTIVITIES

From October 20 – 22, 2014, CRB personnel were on-site to excavate impacted soils from the swale area as shown on Figure 2 using the methodology discussed above. Impacted soils were excavated to a depth of approximately three (3) feet below land surface (BLS), which extended six (6) inches to one (1) foot into the groundwater. The excavated material was placed on plastic on an impervious surface and covered or loaded directly into trucks for offsite disposal.

The excavation encompassed all of the soil samples previously identified as exceeding the SCTLs and extended up to the western edge of the building and the building footers. Several trees were located on the western side of the excavation as shown on Figure 2. The excavation extended as close to the trees as possible without significantly damaging the tree root systems or potentially compromising the ability of the trees to remain standing.

On October 22, 2014, CRB personnel collected confirmation samples CS-1 through CS-6. All soil samples were collected using a stainless steel sampling device from the zero (0) to two (2) feet below land surface interval from the walls of the excavation. CS-1 and CS-6 were collected from the north and south walls, respectively (each less than twenty [20] feet long), and CS-2 through CS-5 were collected from the west wall in twenty (20) feet intervals. As discussed above, no bottom samples were collected because the excavation extended into the groundwater.

DRAFT

In addition, the excavation extended eastward toward the building and building footers, so no confirmation samples were necessary or collected from this side of the excavation. The locations of the confirmation samples are shown on Figure 2.

The soil samples were preserved on wet ice and transported to Pace Analytical Services, Inc. (Pace) using proper chain of custody protocols to control the transfer of samples. Pace analyzed the samples for PAH compounds by EPA Method 8270.

Benzo(a)pyrene and the benzo(a)pyrene equivalents were reported as 0.24 and 0.4 mg/kg, respectively, in confirmation sample CS-1 0-2, above the SCTLs of 0.1 mg/kg and 0.1 mg/kg, and benzo(a)pyrene and the benzo(a)pyrene equivalents were reported as 0.57 mg/kg and 0.9 mg/kg, respectively, in confirmation sample CS-6 0-2, above the SCTLs.

All other confirmation samples collected on October 22, 2014 were reported as below the SCTLs, indicating that the western extent of the contamination had been reached and the excavation was completed in this direction.

As impacted soils remained, CRB re-mobilized to the Site on October 27, 2014, to excavate additional soil from the areas around CS-1 0-2 and CS-6 0-2. The excavation activities were completed using the same methodology discussed above, and at the conclusion of the excavation activities, confirmation samples CS-1R 0-2 and CS-6R 0-2 were collected.

These confirmation samples were preserved on wet ice and transported to Pace using proper chain of custody protocols to control the transfer of samples for analysis of PAH compounds.

Benzo(a)pyrene and the benzo(a)pyrene equivalents were reported as 0.36 mg/kg and 0.5 mg/kg, respectively, in confirmation sample CS-1R 0-2 and as 0.3 mg/kg and 0.5 mg/kg in confirmation sample CS-6R 0-2, above the SCTLs.

To further remove the impacted soils, CRB re-mobilized to the Site on October 29, 2014, to further excavate soils from the areas around CS-1R 0-2 and CS-6R 0-2 using the same

DRAFT

methodology discussed above. At the conclusion of the excavation activities, confirmation samples CS-1 R2 0-2 and CS-6 R2 0-2 were collected.

These confirmation samples were preserved on wet ice and transported to Pace using proper chain of custody protocols to control the transfer of samples for analysis of PAH compounds.

All compounds analyzed in these confirmation samples were reported as below the SCTLs, indicating the completeness of the excavation activities.

The extents of the excavation and the confirmation sample locations are shown on Figure 2. A summary of the confirmation sample analytical results is included in Table 2, and the confirmation sample laboratory analytical reports and chain of custody records are included in Appendix III.

DRAFT

3.0 SOIL DISPOSAL

All excavated contaminated soil was placed on plastic on an impervious surface and covered or directly loaded into trucks for off-site disposal. Waste Management approved the disposal profile, and the impacted material was transported to the Pompano Beach Landfill using proper manifest procedures. A total of 147.52 tons of impacted material was excavated from the Site and properly disposed. In addition, one (1) drum of impacted soils was generated during the subsequent excavation activities on October 27, 2014, and October 29, 2014, and was disposed of by Waste Management. The Waste Management Disposal Summary is included in Appendix IV, and the final Waste Management disposal tickets will be forwarded to EPGMD under separate cover, when available.

DRAFT

4.0 GROUNDWATER ASSESSMENT

At the completion of the soil source removal activities, the excavation was backfilled with clean fill, and temporary monitoring well MW-1 was installed on October 29, 2014, in the center of the former excavation, as shown on Figure 2. The monitoring well was installed with a track mounted drill rig, equipped with hollow stem augers to a total depth of approximately twelve (12) feet below grade. The monitoring well was constructed of ten (10) feet of 0.01-inch slotted screen, followed by a solid riser extending one (1) foot above land surface, and finished with a locking, watertight cap. The monitoring well installation log is included in Appendix V.

On October 30, 2014, CRB personnel were onsite to sample the newly installed monitoring well. Prior to sampling, five (5) well volumes were purged using a peristaltic pump. The groundwater sampling was conducted in accordance with DEP SOP-001/01, and the groundwater sampling worksheet is included in Appendix VI.

The groundwater sample was preserved on wet ice and transported to Pace using proper chain of custody protocols to control the transfer of samples. Pace analyzed the groundwater sample for PAH compounds.

All compounds analyzed were reported as below detectable limits (BDL). The laboratory analytical report and chain of custody record are included in Appendix VII.

DRAFT

5.0 CONCLUSIONS AND RECOMMENDATIONS

CRB completed this SRR addressing the soil excavation activities and confirmation soil sampling conducted by CRB in connection with the Site. This SRR was completed in accordance with Chapter 62-780, F.A.C. for the Nissan facility, located at 1051 South Federal Highway, Fort Lauderdale, Broward County, Florida.

During a property transaction, assessment activities documented PAH compounds in excess of the Chapter 62-777, F.A.C. SCTLs in the swale area at the Site. To address impacted soils, soil source removal activities were completed in October 2014, by excavating the impacted soils and disposing of the soil at a landfill licensed to accept this material. The results of the final soil confirmation samples were reported as below the SCTLs for all compounds analyzed, indicating the completeness of the soil source removal activities.

At the conclusion of the soil removal activities, the excavation was backfilled, and a monitoring well was installed and sampled. Results of this sampling did not reveal any groundwater impacts.

Based on these results, neither soil nor groundwater impacts remain at the Site, and CRB recommends approving a No Further Action.

Notes:

All compounds reported in mg/kg unless otherwise noted.

Residential and Commercial Soil Cleanup Target Levels (SCTLs) and Leachability Standards as provided in Chapter 62-777, Florida Administrative Code (F.A.C.).

* - Consultant other than CRB was sampling and CRB split samples with the other consultant. SB-3 (0-2) was from the location of SB-3W.

** - Sample collected and analyzed by consultant other than CRB.

*** - Leachability standards provided for individual carcinogenic PAH compounds.

- Site concentrations for carcinogenic polycyclic aromatic hydrocarbons must be converted to Benzo(a)pyrene equivalents before comparison with the appropriate direct exposure SCTL for Benzo(a)pyrene using the approach described in the February 2005 'Final Technical Report: Development of Cleanup Target Levels (CTLs) for Chapter 62-777, F.A.C.'

I - The compound was reported between the laboratory method detection limit (MDL) and the laboratory practical quantitation limit (PQL).

U - Indicates the compound was analyzed for but not detected.

SB-TW-3E (shown on Figure 2) was field analyzed by another consultant with an OVA but not laboratory analyzed. The filtered OVA result was reported as 2.2 ppm.

RE: Source Removal Report and No Further Action Proposal
Nissan Facility, 1051 S Federal Hwy., Fort Lauderdale
FDEP Facility ID No. 068732166 (Non-petroleum)

Dear Mr. Edmunds:

The Broward County Pollution Prevention Division (Division) has reviewed the Source Removal Report (Report) and No Further Action (NFA) Proposal, dated November 17, 2014 (received November 24, 2014), inclusive of supplemental information (disposal manifests) received through December 8, 2014, and submitted by your consultant, CRB Geological & Environmental Services, Inc. The Report documents the removal of soils impacted with non-point source polynuclear aromatic hydrocarbons, as allowable under Section 62-780.500, Florida Administrative Code (F.A.C.).

The Division concurs that the requirements for NFA without restrictions, pursuant to Rule 62-780.680(1), F.A.C., have been fulfilled at the referenced site. Please be advised that you are required to properly abandon all monitoring wells, except any monitoring wells required for compliance monitoring in accordance with Chapter 62-761, F.A.C., or any other required licenses. The monitoring wells must be abandoned in accordance with the requirements of Rule 62-532.500(5), F.A.C., which states that casings are to be filled from bottom to top with neat cement grout.

Please detail these activities in a Well Abandonment Report, to be submitted to the Division no later than **February 6, 2015.** Upon receipt and approval of the Well Abandonment Report, this case will be inactivated by the Division. If you have any questions or concerns, please contact David Vanlandingham, P.E., at (954) 519-1478 or dvanlandingham@broward.org.

Sincerely,
POLLUTION PREVENTION DIVISION

David Vanlandingham, P.E., Engineer IV
Environmental Assessment and Remediation Section

DRAFT

Discharge Reporting Form

PLEASE PRINT OR TYPE

DEP Form # 62-761.900(1)
Form Title Discharge Reporting Form
Effective Date

Instructions are on the reverse side. Please complete all applicable blanks

1. Facility ID Number (if registered): N/A **2. Date of form completion:** 02/11/2019

3. General information
Facility name: Nissan Dealership - Ft Lauderdale
Facility Owner or Operator: Power Nissan LLC
Facility Contact Person Lorenzo Lierena Telephone number: (954) 527-3400 County: BROWARD
Facility Mailing address: 1051 S FEDERAL HIGHWAY, FORT LAUDERDALE, FLORIDA 33316
Location of discharge (facility street address): 1051 S FEDERAL HIGHWAY, FORT LAUDERDALE, FLORIDA 33316
Latitude and Longitude of discharge (If known.)

4. Date of receipt of test results or discovery of confirmed discharge: 2/10/2019 month/day/year

5. Estimated number of gallons discharged: UNKNOWN

6. Discharge affected: [ ] Air [ ] Soil [X] Ground water [ ] Drinking water well(s) [ ] Shoreline [ ] Surface water (water body name)

7. Method of discovery (check all that apply)

[ ] Liquid detector (automatic or manual)	[ ] Internal inspection	[ ] Closure/Closure Assessment
[ ] Vapor detector (automatic or manual)	[ ] Inventory control	[ ] Groundwater analytical samples
[ ] Tightness test	[ ] Monitoring wells	[ ] Soil analytical tests or samples
[ ] Pressure test	[ ] Automatic tank gauging	[ ] Visual observation
[ ] Statistical Inventory Reconciliation	[ ] Manual tank gauging	[X] Other DURING DUE DILIGENCE PHASE II ESA

8. Type of regulated substance discharged: (check one)

[ ] Unknown	[ ] Used/waste oil	[ ] Jet fuel	[ ] Heating oil	[ ] New/lube oil
[ ] Gasoline	[ ] Aviation gas	[ ] Diesel	[ ] Kerosine	[ ] Mineral acid

[ ] Hazardous substance - includes CERCLA substances from USTs above reportable quantities, pesticides, ammonia, chlorine, and derivatives (write in name or Chemical Abstract Service (CAS) number)
[X] Other HYDRAULIC FLUID FROM IN-GROUND AUTOMOTIVE LIFTS

9. Discharge originated from a: (check all that apply)

[ ] Dispensing system	[ ] Pipe	[ ] Barge	[ ] Pipeline	[ ] Vehicle
[ ] Tank	[ ] Fitting	[ ] Tanker ship	[ ] Railroad tankcar	[ ] Airplane
[ ] Unknown	[ ] Valve failure	[ ] Other Vessel	[ ] Tank truck	[ ] Drum

[X] Other HYDRAULIC FLUID FROM IN-GROUND AUTOMOTIVE LIFTS

10. Cause of the discharge: (check all that apply)

[ ] Loose connection	[ ] Puncture	[ ] Spill	[ ] Collision	[ ] Corrosion
[ ] Fire/explosion	[ ] Overfill	[ ] Human error	[ ] Vehicle Accident	[ ] Installation failure

[X] Other UNKNOWN

11. Actions taken in response to the discharge:

12. Comments: Groundwater data was acquired by a third party potential purchaser and subsequently acquired by Power Nissan at a later date.

13. Agencies notified (as applicable):

[ ] State Warning Point *1-800-320-0519*	[ ] National Response Center *1-800-424-8802*	[ ] Fire Department.	[ ] County Tanks Program	[ ] DEP (district/person)

14. To the best of my knowledge and belief all information submitted on this form is true, accurate, and complete.

GSE #291480
EAR #1339
DEP #06/8732166

Dear Ms. Jairman:

On behalf of Lorenzo Enterprises FL Corp. (LEFC), Grove Scientific & Engineering (GSE) has completed a Site Assessment Report (SAR) in accordance with FAC 62.780 for the above-referenced site located in Ft. Lauderdale, Broward County, Florida.

The purpose of the SAR was to evaluate the soil and groundwater impacts identified at the hydraulic lift area in the maintenance area on the site. The SAR also relied upon the data from the Phase II ESA performed in September 2018 conducted by EE&G Environmental Services.

Our scope of field services for the Site Assessment Report at the referenced site included:

1) conducting 8 soil borings to an 8 foot depth adjacent to the north and south hydraulic lift lines inside the maintenance area;

2) obtaining 24 soil samples at the 1 to 3 foot, 3 to 5 foot and 5 to 8 foot depth intervals from 8 soil borings for field testing with an Organic Vapor Analyzer (OVA);

3) obtaining 8 soil samples at the 3 to 5 foot depth interval from 8 soil borings for laboratory testing for EPA Method 8260, EPA Method 8270 and FL Method PRO;

4) installing 5 permanent, 1.25-inch diameter, pre-packed shallow monitor wells to 13 feet in depth around the maintenance area to evaluate groundwater quality and flow direction;

5) installing one permanent, 1.25-inch diameter, pre-packed monitor well to 25 feet in depth inside the maintenance area to evaluate groundwater quality at depth;

6) obtaining 6 groundwater samples from 6 permanent monitor wells for laboratory testing for EPA Method 8260, EPA Method 8270 and FL Method PRO;

7) conducting a groundwater gradient survey from all 6 permanent monitor well locations to evaluate the groundwater flow direction on the site and

DRAFT

8) conducting a potable well survey within a half-mile radius of the site.

Based on the September 2018 EE&G Phase II ESA groundwater laboratory results at two of eight direct push sample points (DP) locations, evidence existed for groundwater contamination on the subject site. The groundwater samples from GW-4 and GW-5 tested at 24.3 mg/L and 5.2 mg/L, respectively, for FL Method PRO compounds exceeding the groundwater cleanup target level (CTL) set at 5 mg/L for FL Method PRO according to FAC 62-777.

Based on the SAR field screening results from 16 soil samples obtained above the water table at 2-foot depth intervals from 8 soil borings, we found no evidence for potential soil contamination at the site. All 16 vadose zone soil samples at the SB-1 through SB-8 locations registered OVA readings at less than 10 parts per million (ppm). However, 3 of 7 soil samples obtained below the water table at a 3-foot depth interval from 8 soil borings exceeded 10 ppm.

Based on the SAR soil laboratory results from 8 soil samples obtained at the 3 to 5 foot depth interval from the 8 soil boring locations, evidence exists for low level soil impacts at the site. One soil sample at the SB-3 soil boring location tested above the residential soil CTL, yet below the commercial soil CTL, for one EPA Method 8270 compound (benzo(a)pyrene) according to FAC 62-777. The remaining 7 soil samples tested either below method detection limits or below residential soil CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds according to FAC 62-777. Therefore, the elevated OVA readings did not correlate well with the laboratory results.

Based on the SAR groundwater laboratory results from 6 permanent monitor well (MW) locations, we found no evidence for groundwater contamination on the subject site. All 6 groundwater samples tested either below method detection limits or below groundwater CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds according to FAC 62-777.

Based on soil laboratory results from the Phase II ESA investigation and the SAR, in addition to site use history, we believe the subject site has isolated low level PAH soil impacts, below SCLTs, at the north hydraulic lift line. Note that these soils are situated below a 6-inch concrete slab and clean soil overburden as an engineering control and subsequently are not a direct exposure risk.

Based on the groundwater laboratory results from the Phase II ESA investigation and the SAR, in addition to site use history, we believe the subject site has isolated low level TPH (i.e. below CTLs) groundwater impacts at the center of the north and south hydraulic lift lines. No off-site impacts were detected.

Based on the groundwater and soil laboratory results, we recommend a no further investigation on the groundwater on the subject site at this time. Overall, we recommend No Further Action status without conditions for the subject site.

The Senior Project Manager for *Grove Scientific & Engineering*, James Golden, P.G. #945 certifies that he currently holds an active license in the state of Florida and is competent through experience to provide the geological services contained in this document and certifies that in his professional judgment that this document meets the requirements of section 62-780.600 for Site Assessment and was prepared under his supervision.

DRAFT

We trust that this SAR is approvable. Please contact us if you have any questions regarding this matter

Sincerely,

Grove Scientific & Engineering Co.

James Golden, P.G. #945
Senior Project Manager

INTRODUCTION

SITE LOCATION AND DESCRIPTION

The subject site is located in Township 50 South, Range 42 East, Section 10 at the northwest corner of S. Federal Highway and SE 11 Street within the city limits of Ft. Lauderdale, Broward County, Florida. The subject site is one contiguous parcel measuring approximately 300 feet east/west, 140 feet north/south, with an area of approximately 1.0 acres. Refer to Figure 1 for a Site Location Map.

The site has been used as an automotive sales and maintenance facility for over 60 years. Improvements on the subject site include a 1-story commercial building with an overlying multi-story parking area. The east side of the property is the new vehicle showroom and west side is the maintenance area containing two hydraulic lifts lines running east-west. The north lift line has 10 hydraulic lift areas along the north building wall and the south lift line has 14 hydraulic lifts along the central maintenance area. Vegetation strips are located along the property lines. Refer to Figure 2 for a site plan.

The subject property is located in a mixed commercial/residential area of Ft. Lauderdale. The area west of the subject site is residential and the areas north, south and east of the subject site are commercial buildings and parking lots.

SUMMARY OF PREVIOUS INVESTIGATIONS

During September 2018, Phase II ESA activities were conducted on the site by EE&G to evaluate potential soil and groundwater impacts from the historic use as a maintenance facility (including multiple hydraulic lifts operating on the site). Nine soil borings (SB-1 through SB-9) were conducted to various depths and eight direct push technology (DPT) sample points (GW-1 through GW-9) were advanced to a depths ranging between 0.5 to 8 feet below land surface.

EE&G collected two soil samples from the 3 to 4-feet BLS interval, which were located adjacent to underground hydraulic lifts (SB-5 & SB-7). The samples were analyzed for EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds. EE&G also collected one soil sample from the 0 to 1-feet BLS depth interval at the southwestern portion of the Property adjacent to the oil water separator (SB-2). The soil sample was analyzed for EPA Method 8260 compounds, EPA Method 8270 compounds, FL Method PRO compounds and 4 metals (arsenic, cadmium, chromium and lead). EE&G also noted that the soil samples collected above the water table did not exhibit elevated net OVA/FID readings above the 10-ppm action level and deeper soils collected below the water table in SB-5 and SB-7 (located within the service area near in-ground hydraulic lifts) exhibited elevated net OVA/FID readings. EE&G noted petroleum odors within the soils collected below the water table in SB-4, SB-5 and SB-7 from 6 to 8-feet BLS. All three soil samples tested either below method detection limits or below residential soil cleanup target levels for all parameters analyzed.

DRAFT

EE&G collected eight shallow-interval DPT groundwater samples on the site, which were designated GW-1 through GW-5 and GW7 through GW-9. The samples were located at the northwestern portion (GW-1) of the site, adjacent to the oil water separator (GW-2), in the vicinity of the former USTs (GW-3), adjacent to underground hydraulic lifts (GW-4, GW-5 & GW-7), southeast corner of the dealership (GW-8), and at the southeastern portion of the site (GW-9), south of SE 11 St. The shallow-interval DPT sampling technique utilized a 4-foot long, stainless-steel screened interval which was set at approximately 0.5 to 4.5-feet BLS to 4 to 8-feet BLS, depending on the depth to the groundwater. These intervals were designed to intersect the groundwater table interface. Groundwater samples were analyzed for EPA Method 8260 compounds, EPA Method 8270 compounds, FL Method PRO compounds and 4 metals (arsenic, cadmium, chromium and lead). Two of the eight groundwater samples (GW-4 and GW-5), adjacent to two hydraulic lifts, tested at 24.3 mg/L and 5.2 mg/L, respectively, for FL Method PRO compounds exceeding the groundwater cleanup target level (CTL) set at 5 mg/L for FL Method PRO according to FAC 62-777.

Refer to the EE&G Phase II ESA dated September 24, 2018, Tables 2 and 4 for a summary of the soil and groundwater laboratory results. Refer to EE&G Phase II ESA Figures 3 and 4 for the soil and groundwater sampling locations. Refer to EE&G Phase II ESA Appendix A for the soil and groundwater laboratory results.

Based on the groundwater results and field observations, EE&G concluded that a petroleum discharge had occurred within the service area from the in-ground hydraulic lifts. LEFC then filed a DNF with the Department.

DRAFT

SITE ASSESSMENT REPORT

SOIL ASSESSMENT

On July 21, 2019, a Global Environmental Services (GES) field technician, under the direction of Grove Scientific & Engineering Co. (GSE) and a Wombat Environmental drilling crew were on-site to evaluate the soil quality at the subject site. Eight soil borings were conducted up to an eight foot depth along both the north and south hydraulic lift lines situated within the maintenance area on the site. Twenty-three soil samples were obtained at the 1 to 3 foot, 3 to 5 and 5 to 8 foot depth intervals from 8 soil borings for field testing with an Organic Vapor Analyzer (OVA). Sixteen soil samples were obtained in the vadose zone at the 1 to 3 foot and 3 to 5 depth intervals. Seven soil samples were obtained below the water table at the 5 to 8 depth interval (at one boring location, concrete was encountered at 5 feet in depth). Note from surface grade to one foot in depth we encountered thick concrete and crushed limerock fill. Also, 8 soil samples were obtained at the 3 to 5 foot depth interval from 8 soil borings for laboratory testing EPA Method 8260, EPA Method 8270 and FL Method PRO.

A Geoprobe direct push rig advanced 8 soil borings to a depth of 8 feet below grade. The 23 soil samples were obtained at 2 foot and 3 foot depth intervals up to 8 feet in depth by advancing a stainless steel direct push sampler with 4-foot plastic sleeves. The groundwater table is approximately 5 feet below grade.

For the OVA screening, each soil sample was placed in a clean glass jar, sealed and allowed to set for a few minutes to allow any volatile gases to accumulate in the head space of the jar. Each soil sample was then screened with the OVA (Photovac Model Micro FID) and each OVA response (unfiltered and filtered) was recorded. Florida Administrative Code (FAC) 62-780 defines the potential for contaminated soil based on any soil sample that has an OVA reading that exceeds 10 ppm.

Refer to Table 1 for a summary the OVA readings on the screened soil samples obtained from the 8 soil borings on the subject site. Refer to Figure 3 for the soil sample locations. Refer to Appendix B for a copy of the soil boring logs.

Field observations indicated no staining or odors in the soil at all 8 soil boring locations to approximately 5 feet in depth. However, at 5 to 8 feet in depth, below the water table, petroleum odors were detected at 3 soil boring locations (SB-1, SB-3 and SB-7). At all soil boring locations, subsurface soils consisted of brown medium grain sand (under concrete and crushed limerock) from surface grade to 8 feet in depth.

Based on the SAR field screening results from 16 soil samples obtained above the water table at 2-foot depth intervals from 8 soil borings, we found no evidence for potential soil contamination at the site. All 16 vadose zone soil samples at the SB-1 through SB-8 locations registered OVA readings at less than 10 parts per million

DRAFT

(ppm). However, 3 of 7 soil samples obtained below the water table at a 3-foot depth interval from 8 soil borings exceeded 10 ppm.

For the laboratory testing, the 8 soil samples were sealed, packed in ice and delivered to Xenco Laboratories in Tampa, Florida. Xenco Laboratories conducted the analytical testing of the soil samples taken on the subject site. Xenco Laboratories has been certified by the Department of Health (NELAP No. E87429) to conduct analytical testing of soil samples.

Xenco Labs was instructed to analyze 8 soil samples from SB-1, SB-2, SB-3, SB-4, SB-5, SB-6, SB-7 and SB-8 for EPA Method 8260 (VOAs), EPA Method 8270 (PAHs) and FL Method PRO. Refer to Table 2 for a summary of the soil laboratory results from the 8 soil boring locations. Refer to Figure 3 for a site plan of the soil boring locations and benzo(a)pyrene concentrations at the 3 to 5 foot depth interval. Refer to Appendix B for a copy of the soil laboratory results and the soil boring logs.

FAC 62-777 defines contaminated soil based on clean soil criteria using a cleanup target level (CTL) for each parameter tested. The specific CTL for each compound or metal is set to two exposure levels: Level I for residential property and Level II for industrial/commercial property. Any soil cleanup is measured against exposure Level I unless industrial properties choose to put institutional controls in place. Also, FAC 62-777 defines a limit for contaminated soil to have the potential to contaminate groundwater using a leachability level (LL) for each parameter tested.

At the SB-3 location, the soil sample tested at 0.531 mg/kg for benzo(a)pyrene, below the commercial soil CTL set for benzo(a)pyrene at 0.7 mg/kg according to FAC 62-777.

Based on the SAR soil laboratory results from 8 soil samples obtained at the 3 to 5 foot depth interval from the 8 soil boring locations, evidence exists for low level soil contamination at the site. One soil sample at the SB-3 soil boring location tested above the residential soil CTL, yet below the commercial soil CTL, for one EPA Method 8270 compounds (benzo(a)pyrene) according to FAC 62-777. The remaining 7 soil samples tested either below method detection limits or below residential soil CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds according to FAC 62-777.

GROUNDWATER ASSESSMENT

GEOPROBE PERMANENT MONITOR WELL INSTALLATION

On July 21, 2019, a GES project manager and Wombat Environmental drilling crew were on-site for the installation of six monitor wells (MWs) to evaluate the groundwater quality and to evaluate the direction of groundwater flow on the site. The five shallow and one deep permanent monitor wells (MW-1, MW-2, MW-3, MW-4, MW-5 and MW-6D) were located at source and perimeter locations around

DRAFT

the maintenance area. The source monitor well locations (MW-1 and MW-6D) were located immediately adjacent to the EE&G GW-4 where FL PRO compounds were detected above the groundwater CTL. Perimeter monitor wells were located on the north property line (MW-2), northeast property area (MW-3), the east side of the maintenance area (MW-4) and the south property line (MW-5) on the site.

The five shallow pre-packed MWs (MW-1, MW-2, MW-3, MW-4 and MW-5) were installed to a depth of approximately 13 feet by advancing a 2.75-inch inside diameter (ID) steel tube beneath the ground surface using direct push technology. The MWs were installed by lowering 10 feet of Schedule 40 PVC, 1.25-inch ID threaded flush joint, 0.01-inch slotted screen with a silica sand pre-pack and three feet of Schedule 40 PVC, 1.25-inch ID riser into the steel tubing. The steel tubing was then lifted from the borehole. The remaining annular space was filled with silica sand with a bentonite seal above the screen interval. The MWs were finished at surface grade with manhole set in a concrete pad, see Appendix D for well completion reports.

The deep pre-packed MW-6D was installed to a depth of approximately 25 feet by advancing a 2.75-inch inside diameter (ID) steel tube beneath the ground surface using direct push technology. The MW was installed by lowering 5 feet of Schedule 40 PVC, 1.25-inch ID threaded flush joint, 0.01-inch slotted screen with a silica sand pre-pack and twenty feet of Schedule 40 PVC, 1.25-inch ID riser into the steel tubing. The steel tubing was then lifted from the borehole. The remaining annular space was filled with silica sand with a bentonite seal above the screen interval. The MW was finished at surface grade with manhole set in a concrete pad.

All pre-packed monitor well installation and purging procedures were conducted by Wombat Environmental Drilling, a state licensed firm (#11193), and are in accordance with FDEP guidelines for monitor well installation. Refer to Figure 4 for the MW locations. Refer to Appendix D for the well completion reports and permanent monitor well construction diagrams.

GROUNDWATER SAMPLING AND ANALYSIS

On July 25, 2019, GES project manager and field technician were on-site to conduct groundwater sampling for laboratory testing to evaluate the groundwater quality on the site. The GES project manager and field technician obtained the 6 groundwater samples from the 6 permanent MWs around the maintenance area on the site. Refer to Figure 4 for groundwater sampling locations.

The groundwater sampling at the site was conducted according to FDEP Standard Operating Procedures SOP-001/01. Prior to sampling, each MW was purged of approximately 2 gallons with a peristaltic pump until the field parameters of pH, temperature, conductivity, dissolved oxygen and turbidity had stabilized. After each MW was purged, the groundwater samples were collected from the peristaltic pump.

The 6 groundwater samples were sealed, packed in ice and delivered to Xenco Laboratories in Tampa, Florida. Xenco Laboratories conducted the analytical testing of the soil samples taken on the subject site. Xenco Laboratories has been certified by the Department of Health (NELAP No. E87429) to conduct analytical testing of groundwater samples taken on the subject site.

Xenco Labs was instructed to analyze the 6 groundwater samples from (MW-1, MW-2, MW-3, MW-4, MW-5 and MW-6D) for laboratory testing for EPA Method 8260 (VOAs), EPA Method 8270 (PAHs) and FL Method PRO. Refer to Table 3 for a summary of the groundwater laboratory results. Refer to Table 3 for a summary of the groundwater laboratory results. Refer to Refer to Figure 4 for the groundwater sampling locations and a TPH concentration map. Refer to Appendix C for a copy of the groundwater laboratory results and sampling logs.

FAC 62-777 defines contaminated groundwater based on clean groundwater criteria using a cleanup target level (CTL) for each parameter tested. Also, FAC 62-550 outlines primary and secondary drinking water standards for each parameter tested. Several of these parameters are also applied to groundwater criteria in FAC 62-777.

At all 6 permanent MW locations, the 6 groundwater samples tested either below method detection limits or below groundwater cleanup target levels (CTLs) for all EPA Method 8260 compounds (VOAs), EPA Method 8270 compounds (PAHs) and FL Method PRO compounds according to FAC 62-777.

Based on the SAR groundwater laboratory results from 6 permanent monitor well (MW) locations, we found no evidence for groundwater contamination on the subject site. All 6 groundwater samples tested either below method detection limits or below groundwater CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds according to FAC 62-777.

GROUNDWATER GRADIENT

On July 25, 2019, GES project manager and field technician were present on-site to evaluate the local groundwater gradient across the site. The purpose of data collection was to assess the slope and direction of groundwater flow across the site. We obtained top-of-casing elevations surveyed to an assumed benchmark elevation of 10.00 feet on a concrete sidewalk along Federal Highway. The tops of all 6 MW casings were surveyed to the nearest hundredth of a foot. An electric water level meter was lowered into the MWs. The depth of groundwater from the top of each casing was recorded. Refer to Figure 5 for groundwater gradient map for July 2019. Refer to Table 4 that summarizes the water table survey data for July 2019.

Based on the calculated groundwater contours, the shallow groundwater gradient was estimated at 0.0005 feet per foot in a northeast direction across the site

DRAFT

during July 2019. This direction supports that the MWs were located to determine the horizontal extent of any contaminant plume from the source area.

POTABLE WELL SURVEY

Based on the Broward County Wellfield Protection Map, we found no evidence for a public supply potable wellfield within a one-half mile radius of the site. Zone 1 of the nearest public supply wellfield, Ft. Lauderdale-Dixie, is located approximately four miles west of the subject site. Based on our field survey, we found no evidence for a private potable well within a quarter-mile radius of the site. We believe that the low concentrations of PAH soil contamination detected at the subject site do not impose an impact to the public/private water supply wells.

DRAFT

CONCLUSIONS AND RECOMMENDATIONS

CONCLUSIONS

Based on the results of the Phase II ESA and SAR for the Lorenzo Nissan Dealership Facility, we conclude the following:

1. Based on the Phase II ESA groundwater laboratory results from two of eight DPT sample points, evidence existed for groundwater contamination on the subject site. The groundwater samples from GW-4 and GW-5 tested at 24.3 mg/L and 5.2 mg/L, respectively, for FL Method PRO compounds exceeding the groundwater cleanup target level (CTL) set at 5 mg/L for FL Method PRO according to FAC 62-777. However, these DPT sample points are a small discrete sample, and tend to not represent ambient aquifer water quality.

2. Based on the SAR field screening results from 16 soil samples obtained above the water table at 2-foot depth intervals from 8 soil borings, we found no evidence for potential soil contamination at the site. All 16 vadose zone soil samples at the SB-1 through SB-8 locations registered OVA readings at less than 10 parts per million (ppm). However, 3 of 7 soil samples obtained below the water table at a 3-foot depth interval from 8 soil borings exceeded 10 ppm.

3. Based on the SAR soil laboratory results from 8 soil samples obtained at the 3 to 5 foot depth interval from the 8 soil boring locations, evidence exists for low level soil contamination at the site. One soil sample at the SB-3 soil boring location tested below the commercial soil CTL, for one EPA Method 8270 compound (benzo(a)pyrene) according to FAC 62-777. The remaining 7 soil samples tested either below method detection limits or below residential soil CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds according to FAC 62-777.

4. Based on the SAR groundwater laboratory results from 6 permanent monitor well (MW) locations, we found no evidence for groundwater contamination on the subject site. All 6 groundwater samples tested either below method detection limits or below groundwater CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds according to FAC 62-777.

5. Based on the calculated groundwater contours, the shallow groundwater gradient was estimated at 0.0005 feet per foot in a northeast direction across the site during July 2019.

6. Based on the Broward County Wellfield Protection Map, we found no evidence for a public supply potable wellfield within a one-half mile radius of the site. Zone 1 of the nearest public supply wellfield, Ft. Lauderdale-Dixie, is located approximately four miles west of the subject site. Based on our field survey, we found no evidence for a private potable well within a quarter- mile radius of the site. We believe that the low concentrations of PAH soil contamination detected at the subject site do not impose any risk to the public/private water supply wells.

DRAFT

7. Based on soil laboratory results from the Phase II ESA investigation and the SAR, in addition to site use history, we believe the subject site is the source for low level PAH soil contamination along the north hydraulic lift line. Note that these soils are situated below a 6-inch concrete slab and clean soil overburden as an engineering control and subsequently are not a direct exposure risk.

8. Based on the groundwater laboratory results from the Phase II ESA investigation and the SAR, in addition to site use history, we believe the subject site is a potential source for low level TPH (i.e. below CTLs) groundwater contamination along both the north and south hydraulic lift lines.

RECOMMENDATIONS

Based on the soil laboratory results, we recommend no further investigation on the soil on the subject site at this time.

Based on the groundwater laboratory results, we recommend no further investigation on the groundwater on the subject site at this time.

Overall, we recommend No Further Action status without conditions for the subject site.

RE: Site Assessment Report
Lorenzo Nissan Dealership, 1051 S Federal Highway, Fort Lauderdale, Florida 33316
Contamination Discovery Date: February 10, 2019
EAR License #1339; FDEP Facility ID #068732166

Dear Mr. Llerena:

The Environmental Engineering and Permitting Division (Division) has reviewed the report titled "Site Assessment Report" (SAR) dated September 27, 2019 (received September 27, 2019), for the referenced site, submitted by your consultant, Grove Scientific & Engineering.

- Delineation of groundwater contamination plume (Plume) is required west of the location of contaminated source well GW-5. The Plume extends north to MW-2, east to MW-4, and south to MW-5. A confirmatory well is required immediately adjacent (i.e. within 10 feet) to GW-5.

- Delineation of the soil contamination plume is also required north of soil boring B-3 (Figure 3 of SAR) at two feet depth. The concentration of polycyclic aromatic hydrocarbons (CPAH) in soil sample B-3 (Benzo(a)pyrene Equivalents = 0.8 mg/kg) exceeds the Industrial Soil Cleanup Target Level (SCTL) (0.7 mg/kg).
  (Note. No further soil assessment is required if the property owner provide written agreement to pursue No Further Action with Controls for the site (Chapter 62-780, F.A.C. Risk Management Options – Level III) by adopting the Alternative SCTL of 1 mg/kg for CPAH. For this option, the site will remain listed as a contaminated site in the FDEP Institutional Registry)

Please submit an Addendum to the SAR to the Division no later than **February 7, 2020**. Please be advised that Section 27-356(d)(4)b of Broward County Code requires that written extension requests (facsimile or email is adequate) be submitted to the Division at least 20 days prior to the established due dates. Also, please note that Section 27-356(d)(4)c of Broward County Code requires that written notifications (facsimile or email is adequate) be provided to the Division at least three working days prior to performing field activities at the site. If you have any questions or require additional information, please contact me at (954) 519-1467 or sjairam@broward.org .

Sincerely,

Seree Jairam, P.E.

ec: James Golden, P.G.

DRAFT

December 5, 2019

Mr. Seree Jairam, P.E.
Broward County Environmental Protection and Growth Management Department

Plantation, Florida 33324

Reference: Site Assessment Report Addendum
Lorenzo Nissan Dealership
1051 S. Federal Highway
Ft. Lauderdale, FL 33316
EAR No. 1339; DEP No. 06/8732166
Project No. 291480

Dear Mr. Jairman:

On behalf of Lorenzo Enterprises FL Corp., Grove Scientific & Engineering (GSE) has completed the enclosed Site Assessment Report Addendum (SARA) in accordance with FAC 62.780 for the above-referenced site located in Ft. Lauderdale, Broward County, Florida.

The purpose of the SARA was to address the comments from Broward County dated October 7, 2019.

Our scope of field services for the Site Assessment Addendum at the referenced site included:

1. To further assess the groundwater quality and levels, GSE retained a Florida-licensed well drilling contractor to install one (1) permanent groundwater monitoring well (MW-7) using direct-push drilling technology (DPT). The well was installed via auguring and extended to a total depth of 13-feet BLS, see Appendix A.

2. GSE collected groundwater samples from the aforementioned monitoring well. The groundwater samples were analyzed for Volatile Organic Aromatics (VOAs) by EPA Method 8260, Polynuclear Aromatic Hydrocarbons (PAHs) by EPA Method 8270, and Total Petroleum Hydrocarbons (TPHs) by Method FL-PRO, see Appendix B.

3. To further assess soil quality, GSE advanced soil borings (SB-3 and SB-9) at the site to a depth of 3-5 feet BLS to assess the extent north of B-3, and to confirm impacts at B-3, see Appendix A. Soil sample SB-9 was analyzed for petroleum vapors in the field using an organic vapor analyzer (OVA) and soil samples were analyzed for TPHs by Method FL-PRO, PAHs, and VOCs, and SB-3 for PAHs only, see Appendix B.

DRAFT

Based on the clean soil and groundwater laboratory results, the SARA recommends a no further action status, without controls for the subject site.

The Senior Project Manager for *Grove Scientific & Engineering*, James Golden, P.G. #945 certifies that he currently holds an active license in the state of Florida and is competent through experience to provide the geological services contained in this document and certifies that in his professional judgment that this document meets the requirements of section 62-780.600 for Site Assessment and was prepared under his supervision.

If you have any questions, please contact our office.

Respectfully submitted,
GROVE SCIENTIFIC & ENGINEERING

James Golden, P.G. #945
Senior Project Manager

SECTION I. INTRODUCTION

SITE LOCATION AND DESCRIPTION

The subject site is located in Township 50 South, Range 42 East, Section 10 at the northwest corner of S. Federal Highway and SE 11 Street Road within the city limits of Ft. Lauderdale, Broward County, Florida. The subject site is one contiguous parcel measuring approximately 300 feet east/west, 140 feet north/south, with an area of approximately 1.0 acres.

The site has been used as an automotive sales and maintenance facility for over 60 years. Improvements on the subject site include a 1-story commercial building with an overlying multi-story parking area. The east side of the property is the new vehicle showroom and west side is the maintenance area containing two hydraulic lifts lines running east-west. The north lift line has 10 hydraulic lift areas along the north building wall and the south lift line has 24 hydraulic lifts along the central maintenance area. Vegetation strips are located along the property lines.

The subject property is located in a mixed commercial/residential area of Ft. Lauderdale. The area west of the subject site is residential and the areas north, south and east of the subject site are commercial buildings and parking lots.

SUMMARY OF PREVIOUS INVESTIGATIONS

The Environmental Engineering and Permitting Division (Division) reviewed the report titled "Site Assessment Report" (SAR) dated September 27, 2019 (received September 27, 2019), for the referenced site. The following comments were received on October 7, 2019 in reference to the aforementioned SAR.

1. Delineation of groundwater contamination plume (Plume) is required west of the location of contaminated source well GW-5. The Plume extends north to MW-2, east to MW-4, and south to MW-5. A confirmatory well is required immediately adjacent (i.e. within 10 feet) to GW-5.

2. Delineation of the soil contamination plume is also required north of soil boring B-3 (Figure 3 of SAR) at two feet depth. The concentration of polycyclic aromatic hydrocarbons (CPAH) in soil sample B-3 (Benzo(a)pyrene Equivalents = 0.8 mg/kg) exceeds the Industrial Soil Cleanup Target Level (SCTL) (0.7 mg/kg).

The following sections document the additional fieldwork and laboratory analysis that was performed in order to address these comments from the Division.

DRAFT

SECTION II. SITE ASSESSMENT REPORT ADDENDUM

SOIL ASSESSMENT

On October 27, 2019, a GES field technician and a Wombat Environmental drilling crew were on-site to evaluate the soil quality at the subject site. Two soil borings were conducted up to an eight-foot depth one just north of boring B-3, approximately 5 feet south of the building wall and the other a sample at location of B-3. A sample was obtained at the 1 to 3 foot, 3 to 5 and 5 to 8-foot depth intervals from each soil boring for field testing with an Organic Vapor Analyzer (OVA). Note from surface grade to one foot in depth we encountered thick concrete and crushed limerock fill. Also, 2 soil samples (SB-3-SB-9) were obtained at the 3 to 5-foot depth interval from the soil borings for laboratory testing EPA Method 8260, EPA Method 8270 and FL Method PRO, SB-3 was analyzed for PAHs only.

A Geoprobe direct push rig advanced 2 soil borings to a depth of 8 feet below grade. Soil samples were obtained at 2 foot and 3-foot depth intervals up to 8 feet in depth by advancing a stainless-steel direct push sampler with 4-foot plastic sleeves. The groundwater table is approximately 5 feet below grade.

For the OVA screening, each soil sample was placed in a clean glass jar, sealed and allowed to set for a few minutes to allow any volatile gases to accumulate in the head space of the jar. Each soil sample was then screened with the OVA (Photovac Model Micro FID) and each OVA response (unfiltered and filtered) was recorded. Florida Administrative Code (FAC) 62-780 defines the potential for contaminated soil based on any soil sample that has an OVA reading that exceeds 10 ppm.

Refer to Table 1 for a summary the OVA readings on the screened soil samples obtained from the soil borings on the subject site. Refer to Figure 1 for the soil sample locations. Refer to Appendix A for a copy of the soil boring logs.

Field observations indicated no staining or odors in the soil at the soil boring locations to approximately 5 feet in depth. At both soil boring locations, subsurface soils consisted of brown medium grain sand (under concrete and crushed limerock) from surface grade to 8 feet in depth.

Based on the SARA field screening results from the soil samples obtained above the water table at 2-foot depth intervals, we found no evidence for potential soil contamination at the site. All vadose zone soil samples registered OVA readings at less than 10 parts per million (ppm). However, soil samples obtained below the water table at a 3-foot depth interval from one soil boring exceeded 10 ppm.

For the laboratory testing, the soil samples were sealed, packed in ice and delivered to Xenco Laboratories in Tampa, Florida. Xenco Laboratories conducted the analytical testing of the soil samples taken on the subject site. Xenco

DRAFT

Laboratories has been certified by the Department of Health (NELAP No. E87429) to conduct analytical testing of soil samples.

Xenco Labs was instructed to analyze the soil samples for EPA Method 8260 (VOAs), EPA Method 8270 (PAHs) and FL Method PRO. Refer to Table 2 for a summary of the soil laboratory results from the soil boring locations. Refer to Figure 1 for a site plan of the soil boring locations and benzo(a)pyrene concentrations at the 3 to 5-foot depth interval. Refer to Appendix B for a copy of the soil laboratory results and Appendix A for the soil boring logs.

FAC 62-777 defines contaminated soil based on clean soil criteria using a cleanup target level (CTL) for each parameter tested. The specific CTL for each compound or metal is set to two exposure levels: Level I for residential property and Level II for industrial/commercial property. Any soil cleanup is measured against exposure Level I unless industrial properties choose to put institutional controls in place. Also, FAC 62-777 defines a limit for contaminated soil to have the potential to contaminate groundwater using a leachability level (LL) for each parameter tested.

At the SB-3 (B-3 confirmation) location and SB-9, the soil samples tested below the detection limits for benzo(a)pyrene, and all other PAHs.

At SB-9 the sample tested either below method detection limits or below residential soil CTLs for all EPA Method 8260 compounds, and FL Method PRO compounds according to FAC 62-777.

GROUNDWATER ASSESSMENT

GEOPROBE PERMANENT MONITOR WELL INSTALLATION

On October 27, 2019, a GES field technician and Wombat Environmental drilling crew were on-site for the installation of a monitor well (MW-7) to evaluate the groundwater quality on the site. The permanent monitor well was located adjacent to EE&G's well point GW-5, where no compounds were detected above the groundwater CTL. The Monitoring well was finished at surface grade with manhole set in a concrete pad.

All pre-packed monitor well installation and purging procedures were conducted by Wombat Environmental Drilling, a state licensed firm (#11193), and are in accordance with FDEP guidelines for monitor well installation. Refer to Figure 2 for the MW locations. Refer to Appendix A for the well completion reports. Figure 3 depicts the permanent monitor well construction design.

GROUNDWATER SAMPLING AND TESTING

On October 29, 2019, a GES field technician was on-site to conduct groundwater sampling for laboratory testing to evaluate the groundwater quality on the site. The

DRAFT

GES field technician obtained the groundwater sample from the permanent monitoring well MW-7. Refer to Figure 2 for groundwater sampling locations.

The groundwater sampling at the site was conducted according to FDEP Standard Operating Procedures SOP-001/01. Prior to sampling, MW-7 was purged of approximately 2 gallons with a peristaltic pump until the field parameters of pH, temperature, conductivity, dissolved oxygen and turbidity had stabilized. After the monitoring well was purged, the groundwater samples were collected from the peristaltic pump.

The groundwater sample was sealed, packed in ice and delivered to Xenco Laboratories in Tampa, Florida. Xenco Laboratories conducted the analytical testing of the soil samples taken on the subject site. Xenco Laboratories has been certified by the Department of Health (NELAP No. E87429) to conduct analytical testing of groundwater samples taken on the subject site.

Xenco Labs was instructed to analyze the groundwater sample from MW-7 for laboratory testing for EPA Method 8260 (VOAs), EPA Method 8270 (PAHs) and FL Method PRO. Refer to Table 3 for a summary of the groundwater laboratory results. Refer to Figure 2 for the groundwater sampling locations and a TPH concentration map. Refer to Appendix B for a copy of the groundwater laboratory results and Appendix A for the sampling logs.

FAC 62-777 defines contaminated groundwater based on clean groundwater criteria using a cleanup target level (CTL) for each parameter tested. Also, FAC 62-550 outlines primary and secondary drinking water standards for each parameter tested. Several of these parameters are also applied to groundwater criteria in FAC 62-777.

The groundwater sample tested either below method detection limits or below groundwater cleanup target levels (CTLs) for all EPA Method 8260 compounds (VOAs), EPA Method 8270 compounds (PAHs) and FL Method PRO compounds according to FAC 62-777.

Based on the SARA groundwater laboratory results, we found no evidence for groundwater contamination on the subject site. The groundwater sample tested either below method detection limits or below groundwater CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and FL Method PRO compounds according to FAC 62-777.

DRAFT

SECTION III. CONCLUSIONS AND RECOMMENDATIONS

CONCLUSIONS

Based on the results of the Phase II ESA, SAR and SARA for the Lorenzo Nissan Dealership Facility, we conclude the following:

1. Based on the groundwater laboratory results from the SAR and MW-7, there is confirmation that GCTLs are not exceeded.
2. Based on the soil laboratory results from SB-3 and SB-7 there is confirmation that the soil CTLs are not exceeded.

RECOMMENDATIONS

Based on the soil and groundwater laboratory results, we recommend no further action, without conditions proposal at the subject site. The subject site meets the criteria for a No further Action, without controls based on the following information:

1. No free product is present
2. Contaminated soil is not present in the unsaturated zone, based on representative samples and laboratory analyses that show no exceedances of Rule 62-777 CTLs
3. Contaminated groundwater is not present based on representative samples and laboratory analyses that show no exceedances of Rule 62-777 CTLs
4. The subject site is supplied with a municipal drinking water service.

Once the NFA is approved, the monitoring wells will be properly abandoned.

RE: Site Assessment Report Addendum
Lorenzo Nissan Dealership, 1051 S Federal Highway, Fort Lauderdale, Florida 33316
Contamination Discovery Date: February 10, 2019
EAR License #1339; FDEP Facility ID #068732166

Dear Mr. Llerena:

The Environmental Engineering and Permitting Division (Division) has reviewed the Site Assessment Report Addendum (Report) dated December 5, 2019 (received December 5, 2019) for the referenced site, submitted by your consultant, Grove Scientific & Engineering.

- Monitoring wells MW-1 and MW-7 should be resampled (no earlier than 3 months from the last sampling date) to meet the No Further Action criteria for groundwater (GW) for the site (i.e. the concentrations of contaminants in the GW samples collected from the previously contaminated wells meet the Chapter 62-777, FAC GW Cleanup Target Levels for at least the last two consecutive quarters).

- Delineation of the soil contamination plume is completed (Figure 1 of the Report). A confirmatory soil sample (within 2 feet, at same depth) is required for impacted soil sample B-3. If the confirmatory soil sample is also impacted, then submit a plan to address the cleanup of impacted soil at the site.

Please submit a report including the above information within 60 days of sampling, but no later than **April 7, 2020**. Please be advised that Section 27-356(d)(4)b of Broward County Code requires that written extension requests (email is adequate) be submitted to the Division at least 20 days prior to the established due dates. Also, please note that Section 27-356(d)(4)c of Broward County Code requires that written notifications (email is adequate) be provided to the Division at least three working days prior to performing field activities at the site. If you have any questions or require additional information, please contact me at (954) 519-1467 or sjairam@broward.org .

Sincerely,

Seree Jairam, P.E.
ec: James Golden, P.G.

Dear Mr. Llerena:

The Environmental Engineering and Permitting Division (Division) has reviewed the report titled "Site Assessment Report Addendum Comments" (Report) dated January 16, 2020 (received January 16, 2020), for the referenced site, submitted by your consultant, Grove Scientific & Engineering. The Report includes the requested updated soil figure and tables.

If the site meets the No Further Action (NFA) criteria for groundwater (GW) on the next GW sampling event, please submit a Site Rehabilitation Completion Report (SRCR) with an NFA proposal, and attachments showing historical analytical sampling results and sampling locations for GW and soil to support the NFA proposal.

The next report is due to the Division no later than **April 7, 2020**. Please be advised that Section 27-356(d)(4)b of Broward County Code requires that written extension requests (email is adequate) be submitted to the Division at least 20 days prior to the established due dates. Also, please note that Section 27-356(d)(4)c of Broward County Code requires that written notifications (email is adequate) be provided to the Division at least three working days prior to performing field activities at the site. If you have any questions or require additional information, please contact me at (954) 519-1467 or sjairam@broward.org .

Dear Mr. Jairman:

On behalf of Lorenzo Enterprises FL Corp. (LEFC), Grove Scientific & Engineering (GSE) is submitting this Site Rehabilitation Completion Report (SRCR) and No Further Action (NFA) proposal for the subject site. This SRCR will present a review of historical site assessment report (SAR) activities at the site, and support for an NFA. The following presents a brief summary of site assessment results.

Site Assessment Reports Summary

SAR-September 27, 2019

The initial SAR reviewed the basis for the DRF, the September 2018 EE&G Phase II ESA. Groundwater laboratory results at two of eight direct push sample points (DP) locations, showed evidence existed for groundwater contamination on the subject site. The groundwater samples from GW-4 and GW-5 tested at 24.3 mg/L and 5.2 mg/L, respectively, for Method FL Pro compounds exceeding the groundwater cleanup target level (CTL) set at 5 mg/L for Method FL Pro according to FAC 62-777.

Based on the SAR field screening results from 16 soil samples obtained above the water table at 2-foot depth intervals from 8 soil borings, we found no evidence for potential soil contamination at the site, see Figure 1. All 16 vadose zone soil samples at the SB-1 through SB-8 locations registered OVA readings at less than 10 parts per million (ppm). However, 3 of 7 soil samples obtained below the water table at a 3-foot depth interval from 8 soil borings exceeded 10 ppm.

Based on the SAR soil laboratory results from 8 soil samples obtained at the 3 to 5-foot depth interval from the 8 soil boring locations, evidence exists for low level soil impacts at the site, see Table 1 for soil quality summary. One soil sample at the SB-3 soil boring location tested above the residential soil CTL, yet below the commercial soil CTL, for one EPA Method 8270 compound (benzo(a)pyrene-BaP) according to FAC 62-777. The remaining 7 soil samples tested either below method detection limits or below residential soil CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and Method FL Pro compounds according to FAC 62-777. Therefore, the elevated OVA readings did not

DRAFT

correlate well with the laboratory results.

Based on the SAR groundwater laboratory results from 6 permanent monitor well (MW) locations, we found no evidence for groundwater contamination on the subject site, see Table 2 for groundwater quality summary and Figure 2 for well locations. All 6 groundwater samples tested either below method detection limits or below groundwater CTLs for all EPA Method 8260 compounds, EPA Method 8270 compounds and Method FL PRO compounds according to FAC 62-777.

Based on soil laboratory results from the Phase II ESA investigation and the SAR, in addition to site use history, we believe the subject site has isolated low level PAH soil impacts, below SCLTs, at the north hydraulic lift line. Note that these soils are situated below a 6-inch concrete slab and clean soil overburden as an engineering control and subsequently are not a direct exposure risk.

The SAR concluded that based on the groundwater laboratory results from the Phase II ESA investigation and the SAR, in addition to site use history, we believe the subject site has isolated low level TPH (i.e. below CTLs) groundwater impacts at the center of the north and south hydraulic lift lines, see Figure 2. No off-site impacts were detected.

Based on the groundwater and soil laboratory results, we recommended no further investigation on the groundwater on the subject site at this time. Overall, we recommend No Further Action status without conditions for the subject site. (Note, all the previously submitted lab reports, tables and figures of the SAR are still valid, and are not re-submitted).

SAR Addendum December 5, 2019

To address the Division's October 7, 2019 SAR review comments, this addendum further assessed the soil quality, groundwater quality and levels. GSE retained a Florida-licensed well drilling contractor to install one (1) permanent groundwater monitoring well (MW-7) using direct-push drilling technology (DPT). The well was installed via auguring and extended to a total depth of 13-feet BLS. GSE collected groundwater samples from the aforementioned monitoring well. The groundwater samples were analyzed for Volatile Organic Aromatics (VOAs) by EPA Method 8260, Polynuclear Aromatic Hydrocarbons (PAHs) by EPA Method 8270, and Total Petroleum Hydrocarbons (TPHs) by Method FL-PRO. The laboratory results showed that no groundwater CTLs were exceeded at MW-7, see Table 2.

To further assess soil quality, GSE advanced soil borings (SB-3 and SB-9) at the site to a depth of 3-5 feet BLS to assess the extent north of B-3, and to confirm impacts at B-3. Soil sample SB-9 was analyzed for petroleum vapors in the field using an organic vapor analyzer (OVA) and soil samples were analyzed for TPHs by Method FL-PRO, PAHs, and VOCs, and SB-3 for PAHs. The results of the soil analyses showed no exceedances of SCTLs. Comments received from the Division on December 12, 2019 were addressed in an addendum dated December 19, 2019 to provide added information on the location of soil quality confirmation sample B-3. Based on this report, the Division granted an NFA for soils on the site.

SAR Addendum- January 16, 2020

This report offered that monitoring wells MW-1 and MW-7 should be resampled (no earlier than 3 months from the last sampling date) to meet the No Further Action criteria for groundwater (GW) for

DRAFT

the site (i.e. the concentrations of contaminants in the GW samples collected from the previously contaminated wells meet the Chapter 62-777, FAC GW Cleanup Target Levels for at least the last two consecutive quarters). The results of this sampling are presented in the SRCR.

This report provided a summary of soil quality data for both VOA and PAH with the MDL and PQL for that particular sample, see Table 1. BaP calculation sheets were also provided for each of the samples that are on Table 2. Revised Figure 1 shows all of the soil borings listed on Table 1 and location of SB-3 confirm.

March 3, 2020 Sampling

As requested by the Division, monitoring wells MW-1 and MW-7 were sampled on March 3, 2020 for EPA 8260 VOCs, 8270 PAHs, and TRPs by method FL-Pro, see field logs in Appendix A. The laboratory analytical report results show no exceedances of groundwater CTLs, see Appendix B, and Table 2. This sampling confirms that these wells meet NFA criteria for 2 consecutive quarters below GW CTLs per Rule 62-777.

No Further Action Proposal

Based on the results of this SRCR, and the Phase II ESA, SAR and SARAs for the Lorenzo Nissan Dealership Facility, we conclude the following:

Based on the groundwater laboratory results from source wells MW-1 and MW-7, there is two quarters (sampling events) of confirmation that GCTLs are not exceeded.

Based on the soil laboratory results from SB-3 and SB-7 there is confirmation that the soil CTLs are not exceeded, and that the Division has approved NFA for soils.

Proposal

Based on the soil and groundwater laboratory results, we recommend no further action, without conditions proposal at the subject site pursuant to Rule 62-780.680. The subject site meets the criteria for a No further Action, without controls based on the following information:

1. No free product is present;
2. No surface water is impacted;
3. Contaminated soil is not present in the unsaturated zone, based on representative samples and laboratory analyses that show no exceedances of Rule 62-777 CTLs;
4. Contaminated groundwater is not present based on representative samples and laboratory analyses that show no exceedances of Rule 62-777 CTLs for two quarters, or rounds of sampling, and
5. The subject site is supplied with a municipal drinking water service.

Therefore, the site meets the NFA criteria for closure without conditions. Once the NFA is approved, the monitoring wells will be properly abandoned and reported to the Division.

The Senior Project Manager for Grove Scientific & Engineering, James Golden, P.G. #945 certifies that he currently holds an active license in the state of Florida and is competent through experience to provide the geological services contained in this document and certifies that in his professional judgment that

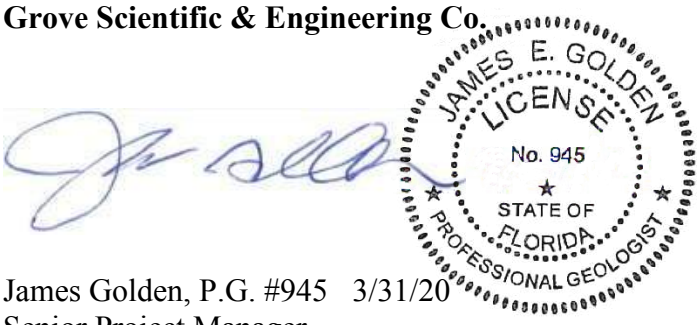
DRAFT

this document meets the requirements of section 62-780.600 for Site Assessment and was prepared under his supervision.

We trust that this NFA proposal is approvable. Please contact us if you have any questions regarding this matter

Sincerely,

Grove Scientific & Engineering Co.



James Golden, P.G. #945 3/31/20
Senior Project Manager

Subject: Site Rehabilitation Completion Order
Lorenzo Nissan Dealership (Formerly Star Motors)
1051 South Federal Highway
Fort Lauderdale, Broward County
FDEP Facility ID# 068732166
Discharge Date: February 10, 2019 (Non-program)
Discharge Score: N/A

Dear Mr. Llerena:

The Petroleum Restoration Program (PRP) has reviewed the Site Rehabilitation Completion Report (SRCR) and No Further Action Proposal (NFAP) dated March 31, 2020 (received April 1, 2020), and the Well Abandonment Report dated April 16, 2020 (received April 16, 2020), for the petroleum product discharge referenced above. Documentation submitted with the SRCR/NFAP confirms that criteria set forth in Subsection 62-780.680(1), Florida Administrative Code (F.A.C.)., have been met. Please refer to the attached maps of the source property and analytical summary tables, Exhibits A and B respectively and hereby incorporated by reference. The SRCR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharge referenced above, except as set forth below.

In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SRCR/NFAP or otherwise allowed by Chapter 62-780, F.A.C.

NOTICE OF RIGHTS

This action is final and effective on the date filed with the Clerk of the Department unless a petition for an administrative hearing is timely filed under Sections 120.569 and 120.57, F.S., before the deadline for filing a

DRAFT

petition. On the filing of a timely and sufficient petition, this action will not be final and effective until a subsequent order of the Department. Because the administrative hearing process is designed to formulate final agency action, the subsequent order may modify or take a different position than this action.

Petition for Administrative Hearing

A person whose substantial interests are affected by the Department's action may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. Pursuant to Rules 28-106.201 and 28-106.301, F.A.C., a petition for an administrative hearing must contain the following information:

(a) The name and address of each agency affected and each agency's file or identification number, if known;
(b) The name, address, any e-mail address, any facsimile number, and telephone number of the petitioner, if the petitioner is not represented by an attorney or a qualified representative; the name, address, and telephone number of the petitioner's representative, if any, which shall be the address for service purposes during the course of the proceeding; and an explanation of how the petitioner's substantial interests will be affected by the agency determination;
(c) A statement of when and how the petitioner received notice of the agency decision;
(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;
(e) A concise statement of the ultimate facts alleged, including the specific facts that the petitioner contends warrant reversal or modification of the agency's proposed action;
(f) A statement of the specific rules or statutes that the petitioner contends require reversal or modification of the agency's proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
(g) A statement of the relief sought by the petitioner, stating precisely the action that the petitioner wishes the agency to take with respect to the agency's proposed action.

The petition must be filed (received by the Clerk) in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@dep.state.fl.us. Also, a copy of the petition shall be mailed to the addressee at the address indicated above at the time of filing.

Time Period for Filing a Petition

In accordance with Rule 62-110.106(3), F.A.C., petitions for an administrative hearing by the addressee must be filed within 21 days of receipt of this written notice. Petitions filed by any persons other than the addressee must be filed within 21 days of publication of the notice or within 21 days of receipt of the written notice, whichever occurs first. You cannot justifiably rely on the finality of this decision unless notice of this decision and the right of substantially affected persons to challenge this decision has been duly published or otherwise provided to all persons substantially affected by the decision. While you are not required to publish notice of this action, you may elect to do so pursuant Rule 62-110.106(10)(a).

The failure to file a petition within the appropriate time period shall constitute a waiver of that person's right to request an administrative determination (hearing) under Sections 120.569 and 120.57, F.S., or to intervene in this proceeding and participate as a party to it. Any subsequent intervention (in a proceeding initiated by another party) will be only at the discretion of the presiding officer upon the filing of a motion in compliance with Rule 28-106.205, F.A.C. If you do not publish notice of this action, this waiver may not apply to persons who have not received a clear point of entry.

DRAFT

Extension of Time

Under Rule 62-110.106(4), F.A.C., a person whose substantial interests are affected by the Department's action may also request an extension of time to file a petition for an administrative hearing. The Department may, for good cause shown, grant the request for an extension of time. Requests for extension of time must be filed with the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@dep.state.fl.us, before the deadline for filing a petition for an administrative hearing. A timely request for extension of time shall toll the running of the time period for filing a petition until the request is acted upon.

Mediation

Mediation is not available in this proceeding.

Judicial Review

Once this decision becomes final, any party to this action has the right to seek judicial review pursuant to Section 120.68, F.S., by filing a Notice of Appeal pursuant to Florida Rules of Appellate Procedure 9.110 and 9.190 with the Clerk of the Department in the Office of General Counsel (Station #35, 3900 Commonwealth Boulevard, Tallahassee, Florida 32399-3000) and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice must be filed within 30 days from the date this action is filed with the Clerk of the Department.

Questions

Any questions regarding the PRP's review of the SRCR/NFAP should be directed to Seree Jairam, P.E at 954-519-1467. Questions regarding legal issues should be referred to the Department's Office of General Counsel at 850-245-2242. Contact with any of the above does not constitute a petition for an administrative hearing or a request for an extension of time to file a petition for an administrative hearing.

The FDEP Facility Number for this facility is 068732166. Please use this identification on all future correspondence with the Department.

EXECUTION AND CLERKING

1051 S FEDERAL HWY
Fort Lauderdale, FL 33316

This license is issued under the provisions of Chapter 27 of the Broward County Code of Ordinances hereinafter called the Code. The above-named applicant, hereinafter called Licensee, is hereby authorized to perform the work or operate the facility shown on the approved drawings, plans, documents, and specifications submitted by the Licensee and made a part hereof and described specifically below. The issuance of this license is a final agency determination. A person with a substantial interest may file a petition to request review of or to intervene in a review of a final administrative determination, subject to the provisions of Section 27-14, Broward County Code of Ordinances. If no objection to this license is received within 14 days, the Licensee will be deemed to have accepted it and all the attached terms and conditions.

ALL GENERAL CONDITIONS and SPECIFIC CONDITIONS, on the back of the license or as attached, are considered to constitute the requirements of this license. The Licensee is required to fully comply with all these conditions. Any failure to comply with conditions or requirements as set forth may result in revocation or suspension of this license and may subject the Licensee to enforcement action in accordance with the provisions of Article 1, Division 4 of the Code.

IMPORTANT: THIS LICENSE IS ISSUED ONLY TO THE LICENSEE FOR THE FACILITY ADDRESS IDENTIFIED ABOVE.
IF THE FACILITY MOVES, CLOSES, OR HAS A CHANGE IN LICENSEE OR ACTIVITY, THE LICENSEE MUST:

- Transfer license to a new owner or operator
- Submit written notification thirty (30) days prior to closing the facility
- Properly remove and/or dispose of all hazardous materials when closing a facility
- Submit application for each hazardous material management facility location(s) in Broward County
- Submit application, secure approval, and call (954) 519-1260 for inspection, prior to installing or modifying storage tanks
- Submit application, secure approval, and call (954) 519-1260 for inspection, prior to removing or moving storage tanks
- Properly maintain storage tanks and the associated license until all tanks are properly closed

The issuance of this license is a final agency determination. A person with a substantial interest may file a petition to request review of or to intervene in a review of a final administrative determination, subject to the provisions of Section 27-14, Broward County Code of Ordinances.

Signature of Tank Owner or Authorized Representative

Date:

Codes and Instructions for Use in Question 5:

CONTENTS:

A = leaded gasoline
B = unleaded gasoline
C = unleaded gasohol
D = vehicular diesel
F = aviation gas
G = jet fuel
K = kerosene
L = used (waste) oil
M = diesel (boilers & generators)
N = leaded gasohol
O = new oil
V = hazardous substance (write in name)

STATUS:

U = currently in use
I = Temporarily out of use with intent for future use

If permanently out of use indicate whether:
A = abandoned and filled with an inert material
E = abandoned and left empty
F = abandoned with product remaining
B = removed from location

PLACEMENT:

Underground:
UW = underground (10% or more buried)

Aboveground:
(more than 90% is not buried)
AC = incontact with ground (pervious base)
AV = elevated above ground

DRAFT

— Staple Here —

4. Questions concerning the tanks program can be directed to the DER Hot Line at: 1-800-422-LEAK.

If emergency or hazardous conditions exist at your site, immediately contact DER.

Just fill out and fold the pre-stamped, pre-addressed postcard.

3. *How to File*

All owners or operators of nonresidential underground tanks storing 550 gallons or less of petroleum products.

2. *Who Should File This Form?*

Notification to DER by use of this form is required to be eligible for the Early Detection Incentive (EDI) program. The EDI program provides for a waiver of cost liability to the tank owner and operator for site clean-up, provided any known or suspected leak is reported to DER from 7/1/86 to 10/1/87. If a leak is known or suspected an EDI form must be complete in addition to this form, and returned to DER. For more information or for EDI forms call 1-800-422-LEAK.

Dear Sirs:

Texaco believes that the storage tanks described on the attached 28 forms may have been taken out of operation after January 1, 1974, and that Texaco may have been the owner of these tanks at the time these tanks were last in operation. Texaco does not know whether these tanks have been removed from the ground. By making this notification, Texaco does not thereby represent that these tanks were taken out of operation after January 1, 1974, that Texaco was the owner of the tanks at the time the tanks were last in operation, nor that the tanks have not been removed from the ground.

Yours very truly,

TEXACO REFINING AND MARKETING INC.

A. L. Alder,

DRAFT

The following Appendices are also included in this Report:

Appendix A:	Health and Safety Plan
Appendix B:	Soil Boring Logs and Field Notes
Appendix C:	Groundwater Sampling Logs and Field Notes
Appendix D:	Laboratory Analytical Reports

SCOPE OF WORK

The following scope of work was completed under Event 1 of the current work order:

- A site specific Health and Safely Plan was prepared (**Appendix A**);
- Advanced a total of six (6) soil borings (SB-1 through SB-6) via hand auger to approximately 4 feet below grade and field screened soils for organic vapors;
- Collected two (2) soil samples (SB-1 and SB-3) from above the current water table for laboratory analysis of BTEX/MTBE, PAH, and TRPH constituents;
- Collected groundwater samples from three (3) existing shallow wells (MW-1, MW-2, and MW-3) for laboratory analysis of BTEX/MTBE, PAH, TRPH, Lead, and EDB constituents.

BACKGROUND

The Roderman Property is located at the northeastern corner of the intersection of South Federal Highway (aka US 1) and Ponce de Leon in Fort Lauderdale, Broward County. According to the State database, the facility property previously contained one (1) 500 gallon capacity UST for storage of fuel oil. A petroleum release was reported at the property in December, 1988. The release was granted eligibility for State funded cleanup under the Early Detection Incentive (EDI) Program in August, 1990. The only available assessment data is included in a June, 1993 Preliminary Contamination Assessment (PCA) Report completed by Environmental Consulting & Technology, Inc. (ECT). A summary of the findings follows:

- Maintenance personnel accidentally placed a water hose in what was believed to be a drainpipe in the ground of the parking lot. After several hours of water draining into the pipe, "some diesel fuel" left over from an old 500 gallon diesel (reportedly used in the 1950s to heat the building) was forced out onto the blacktop pavement;
- On December 22, 1988 Service Station Aid, Inc. was contracted to remove the tank. No records concerning assessment activities conducted during the tank removal were identified;
- On March 3, 1993 ECT installed soil borings and one (1) temporary monitoring well at the site (data not available). ECT was subsequently contracted to conduct the PCA, and assessment activities were conducted from May to June, 1993;
- A total of three (3) soil borings (SB-1 through SB-3) were advanced at locations MW-1 (former UST area), MW-2 (east/downgradient of UST), and MW-3 (north of UST). The borings were installed to approximately 13 feet below grade and soil samples were collected for field screening from land surface to total depths via split spoons;
- OVA/FID data identified no organic vapors exceeding 50 ppm above the water table; however the following "high" net readings were detected below the water table: 250 ppm MW-3/SB-3 (2-4 feet below grade), 100 ppm at MW-2/SB-2 (5-7 feet below grade); and 90 ppm at MW-1/SB-1 (5-7 feet below grade). No soil analytical data was collected;

DRAFT

- The surficial lithology at the site property was reported to be fine/medium grained sand from land surface to approximately 9 feet below grade. Limestone and fine/medium grained sand with shell fragments were encountered from 9 to 12 feet below grade;
- Borings SB-1 through SB-3 were converted to permanent 2 inch diameter monitoring wells screened from 3 to 13 feet below grade;
- The water table was encountered at approximately 3 to 4 feet below grade; and localized groundwater flow was reported to the east;
- No free product was encountered during the assessment activities. According to the PCA Report, groundwater analytical data (VOA/VOHs, PAHs, FL Pro, Lead, and EDB) identified only TRPH (10.8 mg/l) above GCTLs (5 mg/l) in MW-1 (former tank area).

Due to the relatively low State priority ranking score, no subsequent work was conducted at the site. The layout of the facility has not changed and the former tank area is reasonably accessible, although assessment to the south and west of the former tank area is restricted by the site building. As previously noted, the tank has been removed; and no registered fuel systems are located at the property.

SOIL ASSESSMENT

On August 30, 2012 a total of six (6) soil borings (SB-1 through SB-6) were advanced by UNIVERSAL personnel via hand auger to approximately 4 feet below grade. A map depicting the boring locations is provided as **Figure 2.** Soil samples were collected at one foot intervals for field screening during the assessment activities. The samples were screened using a MiniRae2000 photo ionization detector (PID) in accordance with procedures specified in the FDEP's "Guidelines for Assessment and Source Removal of Petroleum Contaminated Soil". Soil boring logs and field notes are provided in **Appendix B.** Referring to the soil boring logs, lithology encountered at the assessment area generally consisted of fine grained sands with silts from land surface to 4 feet below grade, and the water table was encountered at approximately 2 to 3 feet below grade. Soil screening data collected during field event, along with historical data, is included in **Table 1** and depicted on **Figure 2.** Referring to **Table 1,** no elevated organic vapors were encountered in any of the borings, with the exception of 71 parts per million (ppm) in boring SB-3 (near the eastern perimeter of the former tank area) at 1 foot below grade. Based on elevated vapors in SB-3, a soil sample was collected for laboratory analysis. A second soil sample was collected from boring SB-1, located adjacent to source well MW-1. Both samples were collected at 1 foot below grade for analysis of BTEX/MTBE, PAH, and TRPH constituents.

GROUNDWATER ELEVATION GAUGING AND SAMPLING

Prior to commencing groundwater sampling activities on August 30, 2012, depth to water was measured in existing shallow wells MW-1 through MW-3. Depth to water measurements and groundwater elevation data based on historical top of casing measurements are provided in **Table 3.** Referring to **Table 3,** the water table was encountered at depth ranging from 1.81 to 2.59 below top of casing in the wells. Based on the groundwater elevation data, a contour map was prepared to illustrate the localized groundwater flow direction at the site on August 30, 2012 (**Figure 3**). Referring to **Figure 3,** localized groundwater flow was to the northeast, relatively consistent with an easterly flow reported in a prior assessment report.

DRAFT

Groundwater samples were collected on August 30, 2012 from three (3) existing monitoring wells (MW-1 through MW-3) for laboratory analysis of BTEX/MTBE, PAH, TRPH, Lead, and EDB constituents. All wells were sampled in accordance with applicable FS 2200 Groundwater Sampling Standard Operating Procedures and subsequent variances using a peristaltic pump. Strict decontamination procedures were conducted between well samplings. Groundwater sampling logs from the sampling event are provided in **Appendix C**.

ANALYTICAL RESULTS

Soil and groundwater samples collected on August 30, 2012 were analyzed by Xenco Laboratories, Inc. A copy of the analytical report is included in **Appendix D**.

Soil samples SB-1 and SB-3 were analyzed using EPA Methods 8260 (BTEX/MTBE), 8270 (PAHs), and FL-Pro (TRPH). Soil analytical data is summarized in **Table 2A/B**. Referring to **Table 2A/B**, Benzo(a)Pyrene was reported above Chapter 67-777 Soil Cleanup Target Levels (SCTLs) for Direct Exposure in both samples. In addition, Benzo(a)Anthracene was identified above SCTLs in SB-3.

Groundwater samples collected on August 30, 2012 from wells MW-1 through MW-3 were analyzed by EPA Methods 8260 (BTEX/MTBE), 8270 (PAHs), 6010 (Lead), 8011 (EDB), and FL-Pro (TRPH). The analytical results are summarized in **Table 4A/B**. Referring to **Table 4A/B**, none of the listed analytes were detected above Chapter 62-777 Groundwater Cleanup Target Levels (GCTLs) in any of the samples.

CONCLUSIONS AND RECOMMENDATIONS

Field screening of soils collected on August 30, 2012 from the area of the former UST area at the Roderman Property site, identified no elevated organic vapors, with the exception of 71 ppm at the eastern side of the former tank area (1 foot below grade). Laboratory analysis of soil samples SB-1 and SB-3, collected from the former tank area and the area of elevated vapors at 1 foot below grade identified only Benzo(a)Pyrene and Benzo(a)Anthracene above SCTLs.

Laboratory results of groundwater samples collected on August 30, 2012 from source well MW-1 and downgradient wells MW-2 and MW-3 identified no constituents above GCTLs.

Based on the absence of groundwater contamination identified at the site, and only limited soil analytical data exceeding SCTLs, UNIVERSAL recommends proceeding with additional soil sampling to determine if a SRCO may be warranted. The presence of the carcinogens in the soil should be confirmed before concluding that impact at the site is present. It should also be noted that only limited groundwater elevation data is available for the site, and that samples SB-1 and SB-3, collected at 1 foot below grade, may be representative of smear zone soils, not vadose soils. In addition, based on the absence of other petroleum based compounds, Benzo(a)Pyrene and Benzo(a)Anthracene may be naturally occurring in the area.

UNIVERSAL recommends the collection of soil samples adjacent to samples SB-1 and SB-3 for laboratory analysis to confirm the August, 2012 results. In addition, UNIVERSAL recommends collecting three (3) soil samples from other areas of the property to determine if the constituents of

DRAFT

concern are naturally occurring (**Figure 2**). A second round groundwater samples is also recommended to be conducted during the proposed sampling event.

Should you have any questions, or require any additional information, please contact the undersigned at 813.639.1241.

Sincerely,

UNIVERSAL Solutions, Inc.

Benzo(a)pyrene Conversion Table

For Direct Exposure Soil Cleanup Target Levels

Facility/Site Name:	Roderman Property
Location:	Fort Lauderdale
Facility/Site ID No.:	8942959
Soil Sample No.	SB1
Sample Date	8/30/2012
Location:	adjacent to MW-1
Depth (ft):	1

INSTRUCTIONS: Calculate Total Benzo(a)pyrene Equivalents if at least one of the carcinogenic PAHs is detected in the sample at a concentration equal to or higher than the Method Detection Limit (MDL), whether quantified with certainty (the concentration reported has no qualifier) or estimated (the concentration reported has a "J", "T" or "I" qualifier). Enter the contaminant concentrations (in mg/kg) for all seven carcinogenic PAHs in the yellow boxes using the following criteria (and see table below):

1. If quantified with certainty, or estimated and has the "J" qualifier, enter the reported value;
2. If not detected at the MDL (the concentration reported is the MDL followed by the "U" qualifier) enter 1/2 of the reported value;
3. If detected at a concentration lower than the MDL and the concentration is estimated (has the "T" qualifier) enter the estimated value;
4. If detected at a concentration equal to or higher than the MDL but lower than the Practical Quantitation Limit (PQL) and the concentration is estimated (has the "I" qualifier) enter the estimated value;
5. If detected at a concentration equal to or higher than the MDL but lower than the PQL and it is not estimated (the concentration reported is the PQL followed by the "M" qualifier) enter 1/2 of the reported value.

Contaminant	Concentration (mg/kg)	Toxic Equivalency Factor	Benzo(a)pyrene Equivalents
Benzo(a)pyrene	0.434	1.0	0.4340
Benzo(a)anthracene	0.344	0.1	0.0344
Benzo(b)fluoranthene	0.550	0.1	0.0550
Benzo(k)fluoranthene	0.358	0.01	0.0036
Chrysene	0.413	0.001	0.0004
Dibenz(a,h)anthracene	0.106	1.0	0.1060
Indeno(1,2,3-cd)pyrene	0.287	0.1	0.0287

DE Residential = 0.1 mg/kg; DE Industrial = 0.7 mg/kg

Total Benzo(a)pyrene Equivalents = 0.7

The concentration shown EXCEEDS the Residential Direct Exposure SCTL of 0.1 mg/kg.

The concentration shown does not exceed the Industrial Direct Exposure SCTL of 0.7 mg/kg.

Summary Criteria for Table Entries			
Detection	Concentration Reported	Data Qualifier	Enter

FDEP Facility ID# 06/8942959
Discharge Date: 12/3/1988 (EDI)
Priority Score: 9
UNIVERSAL No. 5426
Work Order No. 2013-95-W1878A

12 DEC 18 PM12:40

DRAFT

UNIVERSAL Solutions, Inc. (UNIVERSAL) is pleased to submit this Report summarizing updated soil assessment activities conducted at the Roderman Property site.

The following Draft Figures are included as part of this Report:

Figure 1:	Site Map
Figure 2:	Soil Sampling Locations
Figure 3:	Groundwater Elevation Map
Figure 4:	Groundwater Analytical Summary

Data collected is provided in the following Draft Tables:

Table 1:	Soil Vapor Screening Summary
Table 2A/B:	Soil Analytical Summary
Table 3:	Groundwater Elevation Data
Table 4A/B:	Groundwater Analytical Summary

The following Appendix is also included in this Report:

Appendix:	Soil Boring Logs, Field Notes, and Laboratory Report

SCOPE OF WORK

The following scope of work was completed under Event 2 of the current work order:

- Advanced a total of five (5) soil borings (SB-1R, SB-3R, SB-7, SB-8, and SB-9) via hand auger to approximately 4 feet below grade and field screened soils for organic vapors; and
- Collected a total of five (5) soil samples (SS-1 through SS-5) from above the water table at each boring. The samples were laboratory analyzed for PAH constituents.

BACKGROUND

The Roderman Property is located at the northeastern corner of the intersection of South Federal Highway (aka US 1) and Ponce de Leon in Fort Lauderdale, Broward County. According to the State database, the facility property previously contained one (1) 500 gallon capacity UST for storage of fuel oil. A petroleum release was reported at the property in December, 1988. The release was granted eligibility for State funded cleanup under the Early Detection Incentive (EDI) Program in August, 1990. The only available assessment data is included in a June, 1993 Preliminary Contamination Assessment (PCA) Report completed by Environmental Consulting & Technology, Inc. (ECT). A summary of the findings follows:

- Maintenance personnel accidentally placed a water hose in what was believed to be a drainpipe in the ground of the parking lot. After several hours of water draining into the pipe, "some diesel fuel" left over from an old 500 gallon diesel (reportedly used in the 1950s to heat the building) was forced out onto the blacktop pavement;
- On December 22, 1988 Service Station Aid, Inc. was contracted to remove the tank. No records concerning assessment activities conducted during the tank removal were identified;
- On March 3, 1993 ECT installed soil borings and one (1) temporary monitoring well at the site (data not available). ECT was subsequently contracted to conduct the PCA, and assessment activities were conducted from May to June, 1993;
- A total of three (3) soil borings (SB-1 through SB-3) were advanced at locations MW-1 (former UST area), MW-2 (east/downgradient of UST), and MW-3 (north of UST). The borings were installed to approximately 13 feet below grade and soil samples were collected for field screening from land surface to total depths via split spoons;
- OVA/FID data identified no organic vapors exceeding 50 ppm above the water table; however the following "high" net readings were detected below the water table: 250 ppm MW-3/SB-3 (2-4 feet below grade), 100 ppm at MW-2/SB-2 (5-7 feet below grade); and 90 ppm at MW-1/SB-1 (5-7 feet below grade). No soil analytical data was collected;
- The surficial lithology at the site property was reported to be fine/medium grained sand from land surface to approximately 9 feet below grade. Limestone and fine/medium grained sand with shell fragments were encountered from 9 to 12 feet below grade;
- Borings SB-1 through SB-3 were converted to permanent 2 inch diameter monitoring wells screened from 3 to 13 feet below grade;
- The water table was encountered at approximately 3 to 4 feet below grade; and localized groundwater flow was reported to the east;
- No free product was encountered during the assessment activities. According to the PCA Report, groundwater analytical data (VOA/VOHs, PAHs, FL Pro, Lead, and EDB) identified only TRPH (10.8 mg/l) above GCTLs (5 mg/l) in MW-1 (former tank area).

DRAFT

Due to the relatively low State priority ranking score, no subsequent work was conducted at the site. The layout of the facility has not changed and the former tank area is reasonably accessible, although assessment to the south and west of the former tank area is restricted by the site building. As previously noted, the tank has been removed; and no registered fuel systems are located at the property. A site map is provided as **Figure 1**.

SOIL ASSESSMENT

On November 27, 2012 a total of five (5) soil borings (SB-1R, SB-3R, SB-7, SB-8, and SB-9) were advanced by UNIVERSAL personnel via hand auger to approximately 4 feet below grade. A map depicting the boring locations is provided as **Figure 2.** The purpose of borings SB-1R and SB-3R, located in the former tank area, was to collect confirmatory soil samples for laboratory analysis adjacent to previous borings SB-1 and SB-3. Laboratory analysis of samples collected from borings SB-1 and SB-3 in August, 2012, indicated concentrations of Benzo(a)Pyrene and Benzo(a)Anthracene, along with the Benzo(a)Pyrene Equivalent Calculation, above State Cleanup Target Levels (SCTLs), as defined by Chapter 62-777. Borings SB-7, SB-8, and SB-9, located approximately 60 to 80 feet from the former tank area, were advanced during the November, 2012 field event at the perimeter of the property to evaluate if these compounds may be naturally occurring in the site area.

Soil samples were collected at one foot intervals for field screening during the assessment activities. The samples were screened using a MiniRae2000 photo ionization detector (PID) in accordance with procedures specified in the FDEP's "Guidelines for Assessment and Source Removal of Petroleum Contaminated Soil". Soil boring logs and field notes are provided in the **Appendix**. Referring to the soil boring logs, lithology encountered at the assessment area generally consisted of fine grained sands with silts from land surface to 4 feet below grade, and the water table was encountered at approximately 2 feet below grade. Soil screening data collected during field event, along with prior data, is included in **Table 1** and depicted on **Figure 2.** Referring to **Table 1,** no elevated organic vapors were encountered in any of the borings on November 27, 2012, with the exception of 12 parts per million at 1 foot below grade in SB-3R. Soil samples SS-1, SS-2, SS-3, SS-4, and SS-5 were collected at 1 foot below land surface (bls) at borings SB-7, SB-8, SB-9, SB-1R, and SB-3R, respectively for laboratory analysis of PAH compounds.

ANALYTICAL RESULTS

Soil samples collected on November 27, 2012 were analyzed using EPA Method 8270 (PAHs) by Xenco Laboratories, Inc, a NELAC approved laboratory. A copy of the analytical report is included in the **Appendix**. Soil analytical data is summarized in **Table 2A/B**. Referring to **Table 2A/B**, one or more compounds, along with the Benzo(a)Pyrene Equivalent Calculation, were reported above SCTLs for Direction Exposure in all samples (SS-1 through SS-5). The concentrations reported at locations SB-1R (SS-4) and SB-3R (SS-5) were relatively consistent with data collected at adjacent locations SB-1 and SB-3 in August, 2012. Samples SS-2 and SS-3, collected at the perimeter of the property, showed relatively higher concentrations than the source area, including the highest concentrations reported in sample SS-2 (SB-8), located approximately 80 feet northeast of the former tank area.

DRAFT

As reported in an October, 2012 Event 1 Summary Report submitted by UNIVERSAL, groundwater samples collected on August 30, 2012 from monitor wells MW-1, MW-2, MW-3 identified no dissolved constituents above Chapter 62-777 Groundwater Cleanup Target Levels (GCTLs) in any of the samples.

CONCLUSIONS AND RECOMMENDATIONS

Field screening of soils collected in August and November, 2012 from the former UST area and the perimeter of the Roderman Property site identified no elevated organic vapors exceeding 75 ppm. Laboratory analysis of all soil samples collected at the site identified multiple PAH compounds above Direction Exposure SCTLs, with the highest concentrations located across the site property, approximately 80 feet from the former tank area.

Historical groundwater analytical data (1993) indicated only TRPH slightly above limits in MW-1. Historical field screening of soils identified no elevated organic vapors greater than 50 parts per million above the water table, and only slightly elevated vapors (less than 251 ppm) below the water. Based on the recent laboratory results for soil samples collected at the former tank area and across the property, it appears that the low level compounds are naturally occurring. In addition, recent laboratory results of groundwater samples collected from the source area identified no contaminant concentrations exceeding GCTLs, including the above referenced soil constituents of concern not detected in groundwater at/above laboratory method detection limits (MDLs).

Based on the recent laboratory results of soil and groundwater samples indicating no compounds exceeding State Cleanup Target Levels with the exception of apparent low level, naturally occurring PAHs constituents in soil throughout the site property, UNIVERSAL recommends proceeding with a second quarterly groundwater sampling event. In addition, it should be noted that limited groundwater elevation data has identified the water table up to 2 feet below grade; therefore the 1 foot soil samples discussed above may represent soils from the water table fluctuation zone. If no dissolved constituents are detected above GCTLs in the proposed sampling event, UNIVERSAL will request a Site Rehabilitation Completion Order (SRCO) for the December, 1988 release.

Should you have any questions, or require any additional information, please contact the undersigned at 813.639.1241.

Sincerely,

UNIVERSAL Solutions, Inc.

INSTRUCTIONS: Calculate Total Benzo(a)pyrene Equivalents if at least one of the carcinogenic PAHs is detected in the sample at a concentration equal to or higher than the Method Detection Limit (MDL), whether quantified with certainty (the concentration reported has no qualifier) or estimated (the concentration reported has a "J", "T" or "I" qualifier). Enter the contaminant concentrations (in mg/kg) for all seven carcinogenic PAHs in the yellow boxes using the following criteria (and see table below):

1. If quantified with certainty, or estimated and has the "J" qualifier, enter the reported value;
2. If not detected at the MDL (the concentration reported is the MDL followed by the "U" qualifier) enter 1/2 of the reported value;
3. If detected at a concentration lower than the MDL and the concentration is estimated (has the "T" qualifier) enter the estimated value;
4. If detected at a concentration equal to or higher than the MDL but lower than the Practical Quantitation Limit (PQL) and the concentration is estimated (has the "I" qualifier) enter the estimated value;
5. If detected at a concentration equal to or higher than the MDL but lower than the PQL and it is not estimated (the concentration reported is the PQL followed by the "M" qualifier) enter 1/2 of the reported value.

Contaminant	Concentration (mg/kg)	Toxic Equivalency Factor	Benzo(a)pyrene Equivalents
Benzo(a)pyrene	0.434	1.0	0.4340
Benzo(a)anthracene	0.344	0.1	0.0344
Benzo(b)fluoranthene	0.550	0.1	0.0550
Benzo(k)fluoranthene	0.358	0.01	0.0036
Chrysene	0.413	0.001	0.0004
Dibenz(a,h)anthracene	0.106	1.0	0.1060
Indeno(1,2,3-cd)pyrene	0.287	0.1	0.0287

DE Residential = 0.1 mg/kg; DE Industrial = 0.7 mg/kg

Total Benzo(a)pyrene Equivalents = 0.7

The concentration shown EXCEEDS the Residential Direct Exposure SCTL of 0.1 mg/kg.

The concentration shown does not exceed the Industrial Direct Exposure SCTL of 0.7 mg/kg.

Summary Criteria for Table Entries			
Detection	Concentration Reported	Data Qualifier	Enter

Enter the contaminant concentrations (in mg/kg) for all seven carcinogenic PAHs in the yellow boxes using the following criteria (and see table below):

1. If quantified with certainty, or estimated and has the "J" qualifier, enter the reported value;
2. If not detected at the MDL (the concentration reported is the MDL followed by the "U" qualifier) enter 1/2 of the reported value;
3. If detected at a concentration lower than the MDL and the concentration is estimated (has the "T" qualifier) enter the estimated value;
4. If detected at a concentration equal to or higher than the MDL but lower than the Practical Quantitation Limit (PQL) and the concentration is estimated (has the "I" qualifier) enter the estimated value;
5. If detected at a concentration equal to or higher than the MDL but lower than the PQL and it is not estimated (the concentration reported is the PQL followed by the "M" qualifier) enter 1/2 of the reported value.

Contaminant	Concentration (mg/kg)	Toxic Equivalency Factor	Benzo(a)pyrene Equivalents
Benzo(a)pyrene	1.540	1.0	1.5400
Benzo(a)anthracene	1.490	0.1	0.1490
Benzo(b)fluoranthene	1.430	0.1	0.1430
Benzo(k)fluoranthene	1.620	0.01	0.0162
Chrysene	1.620	0.001	0.0016
Dibenz(a,h)anthracene	0.416	1.0	0.4160
Indeno(1,2,3-cd)pyrene	0.911	0.1	0.0911

DE Residential = 0.1 mg/kg; DE Industrial = 0.7 mg/kg

Total Benzo(a)pyrene Equivalents = 2.4

The concentration shown EXCEEDS the Residential Direct Exposure SCTL of 0.1 mg/kg.

The concentration shown EXCEEDS the Industrial Direct Exposure SCTL of 0.7 mg/kg.

Summary Criteria for Table Entries			
Detection	Concentration Reported	Data Qualifier	Enter
Various	Quantified with certainty	None	reported value
Various	Estimated	J	reported (estimated) value
ND at MDL	MDL	U	1/2 reported value
< MDL	Estimated	T	reported (estimated) value
≥ MDL but < PQL	Estimated	I	reported (estimated) value
≥ MDL but < PQL	PQL	M	1/2 reported value

Benzo(a)pyrene Conversion Table

For Direct Exposure Soil Cleanup Target Levels

Facility/Site Name: Roderman Property

Facility/Site ID No.: 8942959

DRAFT

Soil Sample No. SS-1
Sample Date 11/27/2012
Location: northern property boundary
Depth (ft): 1

INSTRUCTIONS: Calculate Total Benzo(a)pyrene Equivalents if at least one of the carcinogenic PAHs is detected in the sample at a concentration equal to or higher than the Method Detection Limit (MDL), whether quantified with certainty (the concentration reported has no qualifier) or estimated (the concentration reported has a "J", "T" or "I" qualifier). Enter the contaminant concentrations (in mg/kg) for all seven carcinogenic PAHs in the yellow boxes using the following criteria (and see table below):

1. If quantified with certainty, or estimated and has the "J" qualifier, enter the reported value;
2. If not detected at the MDL (the concentration reported is the MDL followed by the "U" qualifier) enter 1/2 of the reported value;
3. If detected at a concentration lower than the MDL and the concentration is estimated (has the "T" qualifier) enter the estimated value;
4. If detected at a concentration equal to or higher than the MDL but lower than the Practical Quantitation Limit (PQL) and the concentration is estimated (has the "I" qualifier) enter the estimated value;
5. If detected at a concentration equal to or higher than the MDL but lower than the PQL and it is not estimated (the concentration reported is the PQL followed by the "M" qualifier) enter 1/2 of the reported value.

Contaminant	Concentration (mg/kg)	Toxic Equivalency Factor	Benzo(a)pyrene Equivalents
Benzo(a)pyrene	0.987	1.0	0.9870
Benzo(a)anthracene	0.693	0.1	0.0693
Benzo(b)fluoranthene	0.597	0.1	0.0597
Benzo(k)fluoranthene	1.010	0.01	0.0101
Chrysene	1.070	0.001	0.0011
Dibenz(a,h)anthracene	0.252	1.0	0.2520
Indeno(1,2,3-cd)pyrene	0.556	0.1	0.0556

DE Residential = 0.1 mg/kg; DE Industrial = 0.7 mg/kg

Total Benzo(a)pyrene Equivalents = 1.4

The concentration shown EXCEEDS the Residential Direct Exposure SCTL of 0.1 mg/kg.

The concentration shown EXCEEDS the Industrial Direct Exposure SCTL of 0.7 mg/kg.

Summary Criteria for Table Entries			
Detection	Concentration Reported	Data Qualifier	Enter
Various	Quantified with certainty	None	reported value
Various	Estimated	J	reported (estimated) value
ND at MDL	MDL	U	1/2 reported value
< MDL	Estimated	T	reported (estimated) value
≥ MDL but < PQL	Estimated	I	reported (estimated) value
≥ MDL but < PQL	PQL	M	1/2 reported value

UNIVERSAL No. 5426
Work Order No. 2013-95-W1878A

RECEIVED
2013 JAN 18 A 10:32

UNIVERSAL Solutions, Inc. (UNIVERSAL) is pleased to submit this Low Scored Site Initiative (LSSI) Report and Site Rehabilitation Completion Order (SRCO) Request detailing assessment activities completed at the above referenced facility. The activities were conducted under Events 1, 2, and 3 of LSSI Work Order No. 2013-95-W1878A.

The following Figures are included as part of this Report:

Figure 1:	Site Map
Figure 2:	Soil Sampling Locations
Figures 3A/B:	Groundwater Elevation Maps
Figure 4:	Groundwater Analytical Summary

Data collected is provided in the following Tables:

Table 1:	Soil Vapor Screening Summary
Table 2A/B:	Soil Analytical Summary with BaP Tables
Table 3:	Groundwater Elevation Data
Table 4A/B:	Groundwater Analytical Summary

DRAFT

The following Appendices are also included in this Report:

Appendix A:	Well Construction & Boring Logs, Groundwater Sampling Logs, and Field Notes
Appendix B:	Laboratory Reports
Appendix C:	SCS Worksheets

SCOPE OF WORK

The following scope of work was completed under Event 1 of the current work order:

- A site specific Health and Safety Plan was prepared. The Plan was submitted to the Department in an October 1, 2012 Event 1 Summary Report;
- Advanced a total of six (6) soil borings (SB-1 through SB-6) via hand auger to approximately 4 feet below grade and field screened soils for organic vapors;
- Collected two (2) soil samples (SB-1 and SB-3) from above the current water table for laboratory analysis of BTEX/MTBE, PAH, and TRPH constituents;
- Collected groundwater samples from three (3) existing shallow wells (MW-1, MW-2, and MW-3) for laboratory analysis of BTEX/MTBE, PAH, TRPH, Lead, and EDB constituents.

The following scope of work was completed under Event 2 of the current work order:

- Advanced a total of five (5) soil borings (SB-1R, SB-3R, SB-7, SB-8, and SB-9) via hand auger to approximately 4 feet below grade and field screened soils for organic vapors; and
- Collected a total of five (5) soil samples (SS-1 through SS-5) from above the water table at each boring. The samples were laboratory analyzed for PAH constituents. BaP study @

The following scope of work was completed under Event 3 of the current work order:

- Collected groundwater samples from three (3) existing shallow wells (MW-1, MW-2, and MW-3) for laboratory analysis of BTEX/MTBE, PAH, and TRPH constituents.

BACKGROUND

The Roderman Property is located at the northeastern corner of the intersection of South Federal Highway (aka US 1) and Ponce de Leon in Fort Lauderdale, Broward County. According to the State database, the facility property previously contained one (1) 500 gallon capacity UST for storage of fuel oil. A petroleum release was reported at the property in December, 1988. The release was granted eligibility for State funded cleanup under the Early Detection Incentive (EDI) Program in August, 1990. The only available assessment data is included in a June, 1993 Preliminary Contamination Assessment (PCA) Report completed by Environmental Consulting & Technology, Inc. (ECT). A summary of the findings follows:

- Maintenance personnel accidentally placed a water hose in what was believed to be a drainpipe in the ground of the parking lot. After several hours of water draining into the pipe, "some diesel fuel" left over from an old 500 gallon diesel (reportedly used in the 1950s to heat the building) was forced out onto the blacktop pavement;
- On December 22, 1988 Service Station Aid, Inc. was contracted to remove the tank. No records concerning assessment activities conducted during the tank removal were identified;
- On March 3, 1993 ECT installed soil borings and one (1) temporary monitoring well at the site (data not available). ECT was subsequently contracted to conduct the PCA, and assessment activities were conducted from May to June, 1993;

DRAFT

- A total of three (3) soil borings (SB-1 through SB-3) were advanced at locations MW-1 (former UST area), MW-2 (east/downgradient of UST), and MW-3 (north of UST). The borings were installed to approximately 13 feet below grade and soil samples were collected for field screening from land surface to total depths;
- Slightly elevated organic vapors exceeding 50 ppm were identified above the water table; however the following "high" net readings were detected below the water table: 250 ppm MW-3/SB-3 (2-4 feet below grade), 100 ppm at MW-2/SB-2 (5-7 feet below grade); and 90 ppm at MW-1/SB-1 (5-7 feet below grade). No soil analytical data was collected;
- The lithology at the site property was reported to be fine/medium grained sand from land surface to approximately 9 feet below grade. Limestone and fine/medium grained sand with shell fragments were encountered from 9 to 12 feet below grade;
- Borings SB-1 through SB-3 were converted to permanent 2 inch diameter monitoring wells screened from 3 to 13 feet below grade;
- The water table was encountered at approximately 3 to 4 feet below grade; and localized groundwater flow was reported to the east;
- No free product was encountered during the assessment activities. According to the PCA Report, groundwater analytical data (VOA/VOHs, PAHs, FL Pro, Lead, and EDB) identified only TRPH (10.8 mg/l) above GCTLs (5 mg/l) in MW-1 (former tank area).

Due to the relatively low State priority ranking score, no subsequent work was conducted at the site. The layout of the facility has not changed and the former tank area is reasonably accessible, although assessment to the south and west of the former tank area is restricted by the site building. As previously noted, the tank has been removed; and no registered fuel systems are located at the property. The basic site layout is depicted on **Figure 1**.

SOIL ASSESSMENT

Event 1

On August 30, 2012 a total of six (6) soil borings (SB-1 through SB-6) were advanced by UNIVERSAL personnel via hand auger to approximately 4 feet below grade. A map depicting the boring locations is provided as **Figure 2.** Soil boring logs and field notes are provided in **Appendix A**. Referring to the boring logs, no elevated organic vapors were encountered in any of the borings, with the exception of 71 parts per million (ppm) in boring SB-3 (near the eastern perimeter of the former tank area) at 1 foot below land surface (bls). Based on elevated vapors in SB-3, a soil sample was collected for laboratory analysis. A second soil sample was collected from boring SB-1, located adjacent to source well MW-1. Both samples were collected at 1 foot below grade for analysis of BTEX/MTBE, PAH, and TRPH constituents.

Event 2

On November 27, 2012 a total of five (5) soil borings (SB-1R, SB-3R, SB-7, SB-8, and SB-9) were advanced by UNIVERSAL personnel via hand auger to approximately 4 feet below grade. The locations of the borings are depicted on **Figure 2.** The purpose of borings SB-1R and SB-3R, located in the former tank area, was to collect confirmatory soil samples for laboratory analysis adjacent to previous borings SB-1 and SB-3. Laboratory analysis of samples collected from borings SB-1 and SB-3 in August, 2012, indicated concentrations of Benzo(a)Pyrene and Benzo(a)Anthracene, along with the Benzo(a)Pyrene

DRAFT

Equivalent Calculation, above State Cleanup Target Levels (SCTLs), as defined by Chapter 62-777. Borings SB-7, SB-8, and SB-9, located approximately 60 to 80 feet from the former tank area, were advanced during the November, 2012 field event at the perimeter of the property to evaluate if these compounds are present in soils outside the area of the former UST. Referring to the boring logs, no elevated organic vapors were encountered in any of the borings on November 27, 2012, with the exception of 12 ppm at 1 foot below grade in SB-3R. Soil samples SS-1, SS-2, SS-3, SS-4, and SS-5 were collected at 1 foot bls at borings SB-7, SB-8, SB-9, SB-1R, and SB-3R, respectively for laboratory analysis of PAH compounds.

Soil samples were collected at one foot intervals for field screening during both field events. The samples were screened using a MiniRae2000 photo ionization detector (PID) in accordance with procedures specified in the FDEP's "Guidelines for Assessment and Source Removal of Petroleum Contaminated Soil". Soil boring logs and field notes are provided in the **Appendix A.** Referring to the soil boring logs, lithology encountered at the assessment area generally consisted of fine grained sands with silts from land surface to 4 feet below grade, and the water table was encountered at approximately 2 to 3 feet below grade. Soil screening data collected during field events, along with prior data, is included in **Table 1** and the recent data is depicted on **Figure 2.**

GROUNDWATER ELEVATION GAUGING AND SAMPLING

Prior to commencing groundwater sampling activities on August 30, 2012, depth to water was measured in existing shallow wells MW-1 through MW-3. UNIVERSAL personnel returned to the site on January 4, 2013 and collected a second round of water levels prior to groundwater sampling activities. Depth to water measurements and groundwater elevation data based on historical top of casing measurements are provided in **Table 3**. Referring to **Table 3**, the water table was encountered at depths ranging from approximately 2 to 4 feet bls during the field event. Based on the groundwater elevation data, contour maps were prepared to illustrate the localized groundwater flow direction at the site (**Figures 3A/B**). Referring to **Figures 3A/B,** localized groundwater flow was generally to the east, relatively consistent with historical data.

Groundwater samples were collected on August 30, 2012 from three (3) existing monitoring wells (MW-1 through MW-3) for laboratory analysis of BTEX/MTBE, PAH, TRPH, Lead, and EDB constituents. UNIVERSAL personnel returned to the site on January 4, 2013 and collected groundwater samples from MW-1 through MW-3 for analysis of BTEX/MTBE, PAH, and TRPH compounds. All wells were sampled in accordance with applicable FS 2200 Groundwater Sampling Standard Operating Procedures and subsequent variances using a peristaltic pump. Strict decontamination procedures were conducted between well samplings. Groundwater sampling logs from the sampling event are provided in **Appendix A.**

ANALYTICAL RESULTS

Soil and groundwater samples collected on August 30, 2012, November 27, 2012, and January 4, 2013 were analyzed by Xenco Laboratories, Inc., a NELAC approved facility. Copies of the analytical reports are included in **Appendix B.**

DRAFT

Soil samples SB-1 and SB-3 (August, 2012) were analyzed using EPA Methods 8260 (BTEX/MTBE), 8270 (PAHs), and FL-Pro (TRPH). Soil samples SS-1 through SS-5 (November, 2012) were analyzed only using EPA Method 8270 (PAHs). Soil analytical data is summarized in **Table 2A/B**. Referring to **Table 2A/B**, Benzo(a)Pyrene was reported above Chapter 67-777 Soil Cleanup Target Levels (SCTLs) for Direct Exposure in samples SB-1 and SB-3. In addition, Benzo(a)Anthracene was identified above SCTLs in SB-3. One or more compounds, along with the Benzo(a)Pyrene Equivalent Calculation, were reported above SCTLs for Direction Exposure in samples SS-1 through SS-5. The concentrations reported at locations SS-4 and SS-5 were relatively consistent with August, 2012 data collected at adjacent locations SB-1 and SB-3. Samples SS-2 and SS-3, collected at the perimeter of the property, showed relatively higher concentrations than the former tank area, including the highest concentrations reported in sample SS-2 (SB-8), located approximately 80 feet northeast of the former tank area.

Groundwater samples collected in August, 2012 from wells MW-1 through MW-3 were analyzed by EPA Methods 8260 (BTEX/MTBE), 8270 (PAHs), 6010 (Lead), 8011 (EDB), and FL-Pro (TRPH). Samples collected from MW-1 through MW-3 in January, 2013, were analyzed by EPA Methods 8260 (BTEX/MTBE), 8270 (PAHs), FL-Pro (TRPH). The analytical results are summarized in **Table 4A/B**. Referring to **Table 4A/B**, none of the listed analytes were detected above Chapter 62-777 Groundwater Cleanup Target Levels (GCTLs) in any of the samples. In addition, no constituents were detected above laboratory method detection limits (MDLs) in the samples collected in January, 2013.

CONCLUSIONS AND RECOMMENDATIONS

Historical groundwater analytical data (1993) from the Roderman Property site indicated only TRPH slightly above limits in MW-1. Historical field screening of soils identified no elevated organic vapors greater than 50 parts per million above the water table, and only slightly elevated vapors (less than 251 ppm) below the water. Recent field screening of soils collected in August and November, 2012 from the former UST area and the perimeter of the site property identified no elevated organic vapors exceeding 75 ppm. Laboratory analysis of all soil samples collected at the site identified multiple PAH compounds above Direction Exposure SCTLs, with the highest concentrations located across the site property, approximately 80 feet from the former tank area. Recent groundwater analytical data, collected during two (2) separate field events conducted in August, 2012 and January, 2013, identified no petroleum based compounds exceeding GCTLs.

The recent laboratory results for soil samples collected at the former tank area and across the property, suggest that the low level compounds are naturally occurring. In addition, recent laboratory results of groundwater samples collected from the source area, and downgradient, identified no contaminant concentrations exceeding GCTLs, including the above referenced soil constituents of concern not detected in groundwater at/above laboratory method detection limits (MDLs).

Based on the recent laboratory results of soil and groundwater samples indicating no compounds exceeding applicable State Cleanup Target Levels with the exception of apparent low level, possibly naturally occurring PAHs constituents in soil throughout the site property, UNIVERSAL recommends that a SRCO is issued for the December, 1988 release.

Benzo(a)pyrene Conversion Table

For Direct Exposure Soil Cleanup Target Levels

Facility/Site Name:	Roderman Property
Location:	Fort Lauderdale
Facility/Site ID No.:	8942959
Soil Sample No.	SB1
Sample Date	8/30/2012
Location:	adjacent to MW-1
Depth (ft):	1

INSTRUCTIONS: Calculate Total Benzo(a)pyrene Equivalents if at least one of the carcinogenic PAHs is detected in the sample at a concentration equal to or higher than the Method Detection Limit (MDL), whether quantified with certainty (the concentration reported has no qualifier) or estimated (the concentration reported has a "J", "T" or "I" qualifier). Enter the contaminant concentrations (in mg/kg) for all seven carcinogenic PAHs in the yellow boxes using the following criteria (and see table below):

1. If quantified with certainty, or estimated and has the "J" qualifier, enter the reported value;
2. If not detected at the MDL (the concentration reported is the MDL followed by the "U" qualifier) enter 1/2 of the reported value;
3. If detected at a concentration lower than the MDL and the concentration is estimated (has the "T" qualifier) enter the estimated value;
4. If detected at a concentration equal to or higher than the MDL but lower than the Practical Quantitation Limit (PQL) and the concentration is estimated (has the "I" qualifier) enter the estimated value;
5. If detected at a concentration equal to or higher than the MDL but lower than the PQL and it is not estimated (the concentration reported is the PQL followed by the "M" qualifier) enter 1/2 of the reported value.

Contaminant	Concentration (mg/kg)	Toxic Equivalency Factor	Benzo(a)pyrene Equivalents
Benzo(a)pyrene	0.434	1.0	0.4340
Benzo(a)anthracene	0.344	0.1	0.0344
Benzo(b)fluoranthene	0.550	0.1	0.0550
Benzo(k)fluoranthene	0.358	0.01	0.0036
Chrysene	0.413	0.001	0.0004
Dibenz(a,h)anthracene	0.106	1.0	0.1060
Indeno(1,2,3-cd)pyrene	0.287	0.1	0.0287

DE Residential = 0.1 mg/kg; DE Industrial = 0.7 mg/kg

Total Benzo(a)pyrene Equivalents = **0.7**

The concentration shown EXCEEDS the Residential Direct Exposure SCTL of 0.1 mg/kg.

The concentration shown does not exceed the Industrial Direct Exposure SCTL of 0.7 mg/kg.

Summary Criteria for Table Entries			
Detection	Concentration Reported	Data Qualifier	Enter
Various	Quantified with certainty	None	reported value
Various	Estimated	J	reported (estimated) value
ND at MDL	MDL	U	1/2 reported value
< MDL	Estimated	T	reported (estimated) value
≥ MDL but < PQL	Estimated	I	reported (estimated) value
≥ MDL but < PQL	PQL	M	1/2 reported value

Benzo(k)fluoranthene	1.620	0.01	0.0162
Chrysene	1.620	0.001	0.0016
Dibenz(a,h)anthracene	0.416	1.0	0.4160
Indeno(1,2,3-cd)pyrene	0.911	0.1	0.0911

DE Residential = 0.1 mg/kg; DE Industrial = 0.7 mg/kg

Total Benzo(a)pyrene Equivalents = 2.4

The concentration shown EXCEEDS the Residential Direct Exposure SCTL of 0.1 mg/kg.

The concentration shown EXCEEDS the Industrial Direct Exposure SCTL of 0.7 mg/kg.

Summary Criteria for Table Entries

Detection	Concentration Reported	Data Qualifier	Enter
Various	Quantified with certainty	None	reported value
Various	Estimated	J	reported (estimated) value
ND at MDL	MDL	U	1/2 reported value
< MDL	Estimated	T	reported (estimated) value
≥ MDL but < PQL	Estimated	I	reported (estimated) value
≥ MDL but < PQL	PQL	M	1/2 reported value

DRAFT

Benzo(a)pyrene Conversion Table

For Direct Exposure Soil Cleanup Target Levels

Facility/Site Name:	Roderman Property
Location:	Fort Lauderdale
Facility/Site ID No.:	8942959
Soil Sample No.	SS-1
Sample Date	11/27/2012
Location:	northern property boundary
Depth (ft):	1

INSTRUCTIONS: Calculate Total Benzo(a)pyrene Equivalents if at least one of the carcinogenic PAHs is detected in the sample at a concentration equal to or higher than the Method Detection Limit (MDL), whether quantified with certainty (the concentration reported has no qualifier) or estimated (the concentration reported has a "J", "T" or "I" qualifier). Enter the contaminant concentrations (in mg/kg) for all seven carcinogenic PAHs in the yellow boxes using the following criteria (and see table below):

1. If quantified with certainty, or estimated and has the "J" qualifier, enter the reported value;
2. If not detected at the MDL (the concentration reported is the MDL followed by the "U" qualifier) enter 1/2 of the reported value;
3. If detected at a concentration lower than the MDL and the concentration is estimated (has the "T" qualifier) enter the estimated value;
4. If detected at a concentration equal to or higher than the MDL but lower than the Practical Quantitation Limit (PQL) and the concentration is estimated (has the "I" qualifier) enter the estimated value;
5. If detected at a concentration equal to or higher than the MDL but lower than the PQL and it is not estimated (the concentration reported is the PQL followed by the "M" qualifier) enter 1/2 of the reported value.

Contaminant	Concentration (mg/kg)	Toxic Equivalency Factor	Benzo(a)pyrene Equivalents
Benzo(a)pyrene	0.987	1.0	0.9870
Benzo(a)anthracene	0.693	0.1	0.0693
Benzo(b)fluoranthene	0.597	0.1	0.0597
Benzo(k)fluoranthene	1.010	0.01	0.0101
Chrysene	1.070	0.001	0.0011
Dibenz(a,h)anthracene	0.252	1.0	0.2520
Indeno(1,2,3-cd)pyrene	0.556	0.1	0.0556

DE Residential = 0.1 mg/kg; DE Industrial = 0.7 mg/kg

Total Benzo(a)pyrene Equivalents = 1.4

The concentration shown EXCEEDS the Residential Direct Exposure SCTL of 0.1 mg/kg.

The concentration shown EXCEEDS the Industrial Direct Exposure SCTL of 0.7 mg/kg.

Summary Criteria for Table Entries			
Detection	Concentration Reported	Data Qualifier	Enter
Various	Quantified with certainty	None	reported value
Various	Estimated	J	reported (estimated) value
ND at MDL	MDL	U	1/2 reported value
< MDL	Estimated	T	reported (estimated) value
≥ MDL but < PQL	Estimated	I	reported (estimated) value
≥ MDL but < PQL	PQL	M	1/2 reported value

Subject: LSSI Provisional Site Rehabilitation Completion Approval and Deliverable Review
Roderman Property
1000 S. Federal Hwy
Fort Lauderdale, Broward County
FDEP Facility ID# 06/8942959
Discharge Date: 12/3/1988 (EDI)
Discharge Score: 9
Work Order #2013-95-W1878A

Dear Mr. Alexander:

The Bureau of Petroleum Storage Systems (BPSS) has reviewed the Site Rehabilitation Completion Report (SRCR) and No Further Action Proposal (NFAP) included in the Low Score Site Initiative (LSSI) Site Assessment (SA) Report dated January 11, 2013 (received January 18, 2013), along with Interim Reports received on October 1, 2012 (accepted on October 29, 2012) submitted for the discharge discovered on December 3, 1988 at this facility. Documentation submitted with the SRCR/NFAP confirms that the cleanup criteria set forth in Subsection 62-770.680(1), Florida Administrative Code (F.A.C.), have been met . As such, the recommendation to issue a Site Rehabilitation Completion Order (SRCO) for the discharge referenced above has been approved.

Before the SRCO can be issued, all monitoring wells associated with the rehabilitation of the discharge referenced above have to be properly abandoned and any other applicable facility restoration activities must be completed. The BPSS has received the well abandonment quote, therefore a work order for well abandonment activities, including the removal of the well pads and manhole covers of all monitoring wells to be abandoned, will be generated.

Remember that this site is not yet approved for Site Rehabilitation Completion. In order for the Florida Department of Environmental Protection (FDEP) to issue the SRCO, a work order to perform the site closure will need to be completed and a Well Abandonment Report will need to

DRAFT

be prepared and submitted. After the FDEP receives and approves the Well Abandonment Report, the SRCO will be issued.

As noted above, the BPSS has reviewed the LSSI SA Report submitted for this facility. The report is acceptable and demonstrates that the work outlined in Work Order # 2013-95-W1878A was satisfactorily performed. The final invoice for this work order has already been submitted and processed. If you should have any questions concerning the review of the SRCR/NFAP or the well abandonment work order, please contact me at (850) 222-6446 extension 261 or at the letterhead address, Mail Station 4585.

RETURN RECEIPT REQUESTED

Ms. Kitty Murchison
Kapila & Co.
1000 S. Federal Highway, Suite 200
Fort Lauderdale, FL 33316-1237

Subject: Site Rehabilitation Completion Order
Former Roderman Property
1000 South Federal Highway
(1000 S.E. 6th Avenue per Property Appraiser)
Fort Lauderdale, Broward County
FDEP Facility ID# 06/8942959
Discharge Date: 12/03/1988 (EDI)
Discharge Score: 5

Dear Ms. Murchison:

The Bureau of Petroleum Storage Systems (BPSS) has reviewed the Site Assessment Report (SAR) and No Further Action Proposal (NFAP) dated included in the Low Score Site Initiative (LSSI) Report dated January 11, 2013 (received January 18, 2013) and the Monitoring Well Abandonment Report dated May 21, 2013 (received May 28, 2013), prepared and submitted by Universal Solutions, Inc. for the petroleum product discharge referenced above. All the documents submitted to date are adequate to meet the site assessment requirements of Rule 62-780.600, Florida Administrative Code (F.A.C.). In addition, documentation submitted with the SAR/NFAP confirms that criteria set forth in Subsection 62-780.680(1), F.A.C., have been met. Please refer to the attached maps of the source property and analytical summary tables. The SAR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharge referenced above, except as set forth below.

In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of

DRAFT

concern to the levels approved in the SAR/NFAP or otherwise allowed by Chapter 62-780, F.A.C.

Legal Issues

The Department's Order shall become final unless a timely petition for an administrative hearing is filed under Sections 120.569 and 120.57, Florida Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for an administrative hearing are set forth below.

Persons affected by this Order have the following options:

(A) If you choose to accept the Department's decision regarding the SAR/NFAP you do not have to do anything. This Order is final and effective on the date filed with the Clerk of the Department, which is indicated on the last page of this Order.

(B) If you choose to challenge the decision, you may do the following:

(1) File a request for an extension of time to file a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for an administrative hearing; or

(2) File a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for an Administrative Hearing

For good cause shown, pursuant to Subsection 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for an administrative hearing. Such a request must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Kapila & Co., shall mail a copy of the request to Kapila & Co. at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for an administrative hearing must be made.

How to File a Petition for an Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative hearing under Sections 120.569 and 120.57, F.S. The petition must contain the information set

DRAFT

forth below and must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Kapila & Co., shall mail a copy of the petition to Kapila & Co. at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsection 120.569(2), F.S. and Rule 28-106.201, F.A.C., a petition for an administrative hearing shall contain the following information:

(a) The name, address, and telephone number of each petitioner; the name, address, and telephone number of the petitioner's representative, if any; the facility owner's name and address, if different from the petitioner; the FDEP facility number, and the name and address of the facility;

(b) A statement of when and how each petitioner received notice of the Department's action or proposed action;

(c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;

(d) A statement of the disputed issues of material fact, or a statement that there are no disputed facts;

(e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;

(f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action; and

(g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective on the date filed with the Clerk of the Department, which is indicated on the last page of this Order. Timely filing a petition for an administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

DRAFT

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the Department's clerk (see below).

Questions

Any questions regarding the BPSS's review of the SAR/NFAP should be directed to Kristy Trueblood at (850) 222-6446 ext. 261. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for an administrative hearing or a request for an extension of time to file a petition for an administrative hearing.

The FDEP Facility Number for this facility is 06/8942959. Please use this identification on all future correspondence with the Department.

Sincerely,

Valerie K. Huegel, Chief
Bureau of Petroleum Storage Systems

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Certified Sanborn® Map Report

01/22/24

Site Name:	Client Name:
Federal Courthouse Parking Ga	Langan Engineering
Federal Courthouse Parking Ga	1221 Brickell Avenue
FORT LAUDERDALE, FL 3331	Miami, FL 33131
EDR Inquiry # 7545896.3	Contact: Maria Debianchi

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: A045-4BE7-A1A4

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Langan Engineering (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
